Exported from the public GitHub source on 2026-10-16. The linked page and repository history remain the correction path. Emoji are rendered as searchable text labels for PDF portability.

BETA — source-based editorial synthesis

Open the BETA visual twin with two illustrative figures.

The existing Lexicon defines **C1** as correspondence-oriented clarification when something materially relevant remains unresolved. **C2** covers correction, caution, steering, warning, or other intervention. Their ordering matters when the object has not yet been sufficiently established.

1.1 John's orientation: C1 is clarifying questions, not a verdict

C1 is never wrong because it is not about right or wrong ... study the true meaning of the word clarifying questions (not matter what answer, IF it clarifies it dd job what it suppose to do!)

Spelling Δ in the quote: "no matter"; "did its job"; "supposed to do." Original stays.

C1 is a **clarifying question**. It is not a right/wrong score. If it clarifies, it did its job — whatever the answer. Treating a C1 as a verdict that was "lost" or "won" substitutes scoring for clarification.

1.2 A specific unresolved point

A C1 move identifies the ambiguity that matters to the next step. It leaves room for the answer to change the evaluation. Questions that already assume guilt, error, authority abuse, or harmlessness can import a conclusion while appearing to clarify.

1.3 Outnuancing connection

John's source says C2 may use frame-auditing methods while omitting the deep ethical process inseparable from Outnuancing. The audit therefore includes the proposed intervention, its assumptions, and its effect on the source object.

The opening conversation provides a worked case: an AI introduces an authority-structure concern; John asks how it follows and clarifies the mutually corrective relation; the AI revises its account. The sequence can be examined without treating the AI's explanation of its internal causes as direct access to those causes.

Sources: E13, E20. Public wording is an editorial synthesis unless marked as a quotation.

- **Network Index** — the map, so this distinction stays findable among the other instruments.
- **1888 — Intelligence Before A.I.** — asks what intelligence already included before a probability score is allowed to close the question.

1.5 Recent high-reach independent-media companion

Judge TRICKED BY AI VIDEO Of Dead Victim 'Forgiving' Killer — Breaking Points. Published **5 October 2026**. YouTube displayed approximately **172,000 views** when checked on **9 October 2026**.

Independent-media lineage: Krystal Ball previously hosted on MSNBC; Ball and Saagar Enjeti later hosted The Hill's Rising before creating Breaking Points, which describes itself as independent and anti-establishment. Breaking Points — About · Career and launch history

Why it belongs here: A synthetic representation of a deceased victim was introduced into a legal and moral setting. The case makes consent, provenance, voice substitution, forgiveness, emotional authority and consequence-bearing decisions unusually concrete.

On this page, test the video specifically against **C1 Before C2 — Clarification and Intervention**:

- Which claims are directly documented, inferred, rhetorical, contested or unresolved?
- What does the host or guest preserve, compress, omit or substitute—and does this page repeat any of those transformations?
- Which incentives, authority relations and affected parties remain outside the visible frame?
- What evidence or later outcome would correct the speaker, audience, platform or **ACCM Deep Ethics Project** reading?

Provisional selection. Reach makes the framing socially consequential; it does not settle the claims. The video can be replaced when a closer, stronger or more inspectable specimen appears.
