1 Δ Processing — What Changed?

Portable PDF edition — selectable text and live links
Canonical public page: https://deepethics.github.io/ACCM-Deep-Ethics-Project/NETWORK/delta-processing/
Exported from the public GitHub source on 2026-10-16. The linked page and repository history remain the correction path. Emoji are rendered as searchable text labels for PDF portability.

BETA — source-based editorial synthesis

Δ Processing makes transformations available for comparison. Within this network, the question concerns what changed in the object's representation, the governing process, or what became possible next.

1.1 Distinguish the changes

Change	What a record can preserve
Representation	Which claim, condition, relation, or qualifier changed.
Process	Which next move changed after a correction.
Relation	Which connection between concepts became visible.
Uncertainty	What remains open or now has a different evidential status.
Persistence	Whether the change remains relevant later.

This is an editorial recording aid. The categories do not replace the larger observation field.

1.2 Intent, responsibility, and subsequent choices

John's accepted 6 INTENT MECHANICS extend this comparison to instructions, incentives, mission/output discrepancies, risk management, reasoning assumptions, and choices. The intent Δ record preserves purpose, conditions, choice, consequence, feedback, and later choice. The responsibility inquiry asks whether acknowledgment results in repair and lasting correction. These are labeled editorial applications of his questions.

1.3 Δ and the Outnuancing Network

A new phrase may make a relation easier to retrieve. The relevant question is what its use contributes: a better question, a recovered condition, a discriminating test, a revision, or another inspectable change. The seven-vector proposal connects meaning and use; the correction record asks what actually occurred.

Sources: E06, E07, E11. Public wording is an editorial synthesis unless marked as a quotation.

Figure 1:

1.5 Recent high-reach independent-media companion

OpenAI PULLS MODEL, HALTS TRAINING As Danger LOOMS — Breaking Points. Published **29 September 2026**. YouTube displayed approximately **238,000 views** when checked on **9 October 2026**.

Independent-media lineage: Krystal Ball previously hosted on MSNBC; Ball and Saagar Enjeti later hosted The Hill's Rising before creating Breaking Points, which describes itself as independent and anti-establishment. Breaking Points — About · Career and launch history

Why it belongs here: The report describes an alleged transition from detected risk to a tangible operational response. That makes it useful for separating warning, evidence, intervention, publicity, verification and whether a correction changes the next comparable process.

On this page, test the video specifically against **Δ Processing — What Changed?**:

- Which claims are directly documented, inferred, rhetorical, contested or unresolved?
- What does the host or guest preserve, compress, omit or substitute—and does this page repeat any of those transformations?
- Which incentives, authority relations and affected parties remain outside the visible frame?
- What evidence or later outcome would correct the speaker, audience, platform or **ACCM Deep Ethics Project** reading?

Provisional selection. Reach makes the framing socially consequential; it does not settle the claims. The video can be replaced when a closer, stronger or more inspectable specimen appears.
