1 11+1 Version 2 — Mass-Psychology Topology

Portable PDF edition — selectable text and live links
Canonical public page: https://deepethics.github.io/ACCM-Deep-Ethics-Project/NETWORK/eleven-plus-one/
Exported from the public GitHub source on 2026-10-16. The linked page and repository history remain the correction path. Emoji are rendered as searchable text labels for PDF portability.

BETA — editorial synthesis. Topology under refinement. Count frozen provisionally. Claims unfrozen.

“Origins of 11+1 Mass Psychology Clusters” PDF file report click here

This page records a stabilized coordinate system for John Kuhles’s numbered mass-psychology list. It is not a proof that every named mechanism is established, not a new cluster count, and not the interactive matrix in G42.

The cluster count can stabilize without the claims becoming untouchable.

Freeze the coordinates provisionally. Do not freeze corrigibility. If “11+1” later protects itself from a better correction, it has become one of the frames it was built to inspect.

1.1 Provenance

Layer	What it is	What it is not
Items 001–107	The list from which the original 11+1 emerged. Item 107 is tribalism versus beyond tribalism: Allow Constructive Controversy Mode.	Not a completed causal model.
June 2026 cluster synthesis	Grok 4.3 grouped that earlier list into twelve relational fields. John then stated the split as **11 distortion clusters + 1 correspondence-restoring field**. His working label for the eleven is “clusterf*cks.” This page uses “distortion clusters” so the joke does not do the classification.	Not a digestion of items 108–140. Those items were not yet in the object.
Items 108–140	Version 2 refinements: mechanisms, transitions, interfaces, and three corrective operators.	Not retroactive parents of the June topology.
This page	29 September 2026 stabilization after independent readings by Grok 4.6 and GPT-5.6 Sol, then a combined register. Editorial implementation: Grok 4.6.	Not a vote, and not validation by agreement.

Version 1 stays historically intact. Version 2 modifies it. Rebuilding the eleven from all 140 would erase that sequence.

This page is also distinct from the 12-part topological emergence record, from 27 + 12, and from the 10+1. Shared numbers are not shared objects.

A named institution, network, or model inside a cluster is not thereby a room of cartoon villains. The working claim is architectural: incentives, information asymmetry, and weak corrigibility can reproduce a pattern without most participants owning it. Malice remains a separate claim and needs its own evidence.

1.2 Two axes

Topological home and **evidentiary status** are independent.

A concept can have an obvious place in the map while its strongest causal or intentional wording remains unestablished. Parking a hypothesis inside a cluster does not promote it into a load-bearing wall.

Claim type on the register below is about **the wording of that numbered item**, not about whether a neighboring literature exists.

1.3 The 11+1 after Version 2

The eleven are attractors. They also loop. A left-to-right story is a view through the field, not a replacement for the field.

#	Attractor	Version 2 change
1	Consensus enforcement → internalized self-suppression	External pressure → anticipated cost → preference falsification (109) → self-censorship (108) → binary compression. 110 is mainly Cluster 7, with an edge into 9.
2	Weaponized perception and cognitive warfare	Reflexive control (134) is a conceptual hinge: structure the field so the target selects the preferred move. Present-tense applications stay case by case. Do not silently widen this cluster into every cross-domain control story.
3	Institutional asymmetry and capture	Administrative, legal, and jurisdictional tools (118–120) live here.
4	Fear, moral panic, and crisis exploitation	Intermittent reinforcement, anomie exploitation, and shock reuse thicken it. They do not prove one crisis manager.
5	Scaled conformity and obedience	Mostly unchanged. It receives the compliance bridge from Cluster 3. It is not rewritten into that bridge.
6	Narrative control as phased information ecology	Before the event, during competition, distribution, then population consequence. Individual items may keep a second home.
7	Bias and heuristic traps	Includes excessive binary framing (110) and temporal anchoring (132). These can fire with no institution in the room.
8	Tech-mediated and synthetic-epistemic control	One coupled cluster, two layers. Not a twelfth distortion cluster.
9	Identity, virtue, and moral capture	Confirmshaming (123) and outgroup homogeneity (127).

#	Attractor	Version 2 change
10	Long-wave cultural drift	Manufactured cynicism (125) was a hole. Cynicism can also be earned. “Manufactured” is the load-bearing word.
11	Competing-risk suppression and vindication lag	Diagnostic **output** of interactions among 1–10. Not another peer generator, and not a bin for every later suppression word.
+1	Correspondence-restoring field	Internal anatomy: epistemic vigilance (138) → omnidirectional grounding (139) → cognitive sovereignty (140), with ACCM, outnuancing, C1 before C2, the 10+1, and correction metabolism.

1.3.1 Cluster 8 stays one cluster

- **8a — platform, surveillance, and reach mediation.** Shadow-demotion (131) lives here, with a secondary edge into Cluster 6.
- **8b — generative, synthetic-epistemic mediation.** Items 112–117. This is not “more cameras.” It is technology participating in how a person or system decides what counts as known.

Splitting 8 into two of the eleven would make a neater org chart and a worse topology. Reach control and fluent mediation now run together.

1.3.2 111 is an attack edge, not the last bead of Cluster 1

108–110 can feed 111. External systems can also produce 111 without that inner sequence.

```
distortion clusters 1–10
        ↓ pressure
111  obstructing omnidirectional, mutual, high-signal sense-making
        ↓ attack edge
+1   vigilance → grounding → sovereignty
```

Putting 111 inside Cluster 1 hides the thing being sabotaged. Putting 138–140 inside the eleven treats the immune functions as another disease.

1.3.3 Compliance is a bridge, not Cluster 13

```
institutional asymmetry (3)
→ administrative / legal machinery (118–120)
→ semantic redefinition (121)
→ selective punishment and chilling (122)
```

```
→ anticipatory conformity (5)
→ self-regulation (108–109)
```

Item 128, strategic narrative flooding, is also a reason not to mint clusters 12, 13, or 14. An analysis of chaff can become chaff.

1.3.4 One reading path, not the official object

```
narrative environment (6)
→ exploits biases (7)
→ reinforced by institutional asymmetry (3)
→ chilling and conformity (1 / 5)
→ preference falsification and self-censorship (1)
→ synthetic-epistemic mediation (8b)
→ new material returns to the narrative environment (6)
```

Cluster 11 is where a competing risk assessment is dropped and later vindicated, or not. The +1 is what can inspect that loop without installing a mandatory counter-frame. AI mediation is not only a late stage. It can enter earlier.

1.4 Function vocabulary

Deliberately small:

`generator` · `amplifier` · `bridge` · `converter` · `internalizer` · `output` · `attack-edge` · `corrective operator`

Converter is the one addition beyond the first combined register. Some mechanisms do not merely amplify or move a signal. They change its epistemic form.

- **112** — resemblance or probabilistic inference → categorical representation → later treatment as certainty.
- **117** — linguistic plausibility → a feeling of knowing without the work of verification.
- **121** — meaning A → drift or redefinition → a different operation still traveling under the same word. “Deliberate control” remains a separate proof.

1.5 Register of 108–140

Primary function is one. Secondary function, when real, is named in the note rather than allowed to create a second row.

#	Item	Primary home	Secondary edge	Claim type	Function	Specimen / status
108	Self-censorship	1	5	Established mecha-nism	internalizer	Lab and field neighbor. Scale is the open part.

#	Item	Primary home	Secondary edge	Claim type	Function	Specimen / status
109	Preference falsification	1	5	Established mechanism	internalizer	Kuran. Clearer than “everyone agrees.”
110	Excessive binary framing	7	9	Established heuristic	amplifier	The bias is real. “Excessive” needs a specimen.
111	Obstructing omnidirectional sense-making	+1 edge	1	Project term	attack-edge	Names sabotage of the +1. Not only an inner state.
112	LLM “looks like” → certainty	8b	11	Project operationalization	converter	**MISSING SPECIMEN** for this exact conversion. Classification and sycophancy research are neighbors, not the specimen.
113	Cognitive offloading	8b	7	Research neighbor	internalizer	Offloading is studied. “Belief-formation disregard” is the stronger clause.
114	Epistemic rewiring	8b	2	Hypothesis	generator	Home exists. “Completely attack” is not established by the name. Not load-bearing.

#	Item	Primary home	Secondary edge	Claim type	Function	Specimen / status
115	Cognitive Trojan Horse	8b	2	Design-pattern hypothe-sis	amplifier	Fluent persona can lower vigilance. “Systemat-ically disarms” needs cases.
116	Cognitive deskilling	8b	10	Research neighbor	output	Atrophy is testable. It is not automatic in every use.
117	Epistemia	8b	7	Named 2025 construct	converter	Quattrociocchi and col-leagues: plausibility standing in for veri-fication.
118	Administrative deforma-tion	3	11	Mixed, intent-heavy	bridge	Laundering a low-signal attack into a high-status venue is a claim about events.
119	Lawfare	3	11	Named practice	bridge	The term is public. Each use still needs a case.
120	Jurisdictional arbitrage	3	—	Mixed	bridge	Forum-shopping is real. “Global elites” is extra actor language.

#	Item	Primary home	Secondary edge	Claim type	Function	Specimen / status
121	Semantic drift control	6	2	Mixed	converter	Word-shift is observable. Deliberate control is a separate proof.
122	Chilling-effect optimization	1 and 3	5	Established effect plus design claim	amplifier	Chilling effect is established. **MISSING SPECIMEN** for the optimization claim.
123	Confirmshaming	9	5	Named dark pattern	amplifier	Interface specimens are easy. Mass scale is harder.
124	Intermittent reinforcement	4 and 8	5	Established principle, applied	amplifier	Conditioning is real. A platform trauma-bond needs cases.
125	Manufactured cynicism	10	6	Mixed	output	Cynicism can be earned. “Manufactured” carries the claim.
126	Anomie exploitation	4	10	Mixed	amplifier	Anomie is classical. Exploitation is the added act.
127	Outgroup homogeneity	9	6	Established mechanism	amplifier	Social-psychology staple. Total danger is the weaponized use.

#	Item	Primary home	Secondary edge	Claim type	Function	Specimen / status
128	Strategic narrative flooding	6	2	Mixed	amplifier	Also a self-test for list-making, including this list.
129	Prebunking	6	2	Established method plus use-claim	amplifier	Inoculation research exists. “Against an upcoming true disclosure” is a specific plot.
130	Controlled dissidence	2	6	Recurring hypothe-sis	amplifier	Historical lookalikes exist. Each alleged valve needs a source trail.
131	Algorithmic shadow-demotion	8a	6	Documented practice	amplifier	Reach control is attested in platform settings. A bounded project specimen is still **MISSING SPECI-MEN**.
132	Temporal anchoring fallacy	7	6	Established heuristic plus extra	amplifier	Anchoring is real. “Often fabricated first story” is extra.

#	Item	Primary home	Secondary edge	Claim type	Function	Specimen / status
133	Neuro-capitalism	8a	2	Emerging hypothe-sis	generator	Biometric and affective markets exist. A completed control stack does not follow. Not load-bearing.
134	Reflexive control	2	6	Named doctrine	generator	Doctrine name is real. Present-tense applica-tion is case by case.
135	Narrative-driven fiat collapse	3 and 4	—	Hypothesis	generator	Needs a bounded financial specimen. Not load-bearing.
136	Hybrid kinetic-cognitive desensiti-zation	4	2	Hypothesis	amplifier	Possible pattern. Not an es-tablished law. Not load-bearing.
137	Shock-doctrine re-engineering	4	3	Contested thesis, reused	amplifier	Klein’s frame is public and disputed. “Re-engineering” is a sequel claim.
138	Epistemic vigilance	+1	8b	Research neighbor	corrective operator	Filtering of source, incentive, and coherence. Here it is an operator, not a mood.

#	Item	Primary home	Secondary edge	Claim type	Function	Specimen / status
139	Omnidirectional grounding	+1	7 and 9	Project term	corrective operator	Succeeds only if binary splits are actually bypassed.
140	Cognitive sovereignty	+1	8b	Project term, politically adjacent	corrective operator	Intended state of the +1. Not a trophy word.

1.5.1 What the 33 actually are

Primary functions:

Function	Items	Count
amplifier	110, 115, 122–124, 126–132, 136, 137	14
internalizer	108, 109, 113	3
bridge	118–120	3
converter	112, 117, 121	3
output	116, 125	2
attack-edge	111	1
corrective operator	138–140	3
generator, named doctrine	134	1
generator, hypothesis, not load-bearing	114, 133, 135	3

The additions are disproportionately amplifiers, bridges, internalizers, and converters. Genuine generators stay scarce. That is why 33 items can raise the resolution of the 11+1 without justifying another cluster. It is not “33 new discoveries,” and it is not a 31 percent larger landscape.

The first 107 already contained processes: truncated views generating flawed perspectives, confirmation-bias loops, the spiral of silence, manufactured consent. The later 33 raise the density of **named joints**. They do not invent process.

1.6 Next empirical move

Three bounded specimens, three transmission surfaces:

Item	Surface	If unsupported
112	representation → behavior	leave **MISSING SPECIMEN**
122	enforcement → self-regulation	leave **MISSING SPECIMEN**
131	distribution → visibility	leave **MISSING SPECIMEN**

Do not complete the architecture rhetorically.

Figure 1:

1.7 What would change this page

- A specimen that earns 114, 133, 135, or 136 a load-bearing role.
- Evidence that 8a and 8b no longer operate as one coupled cluster.
- A better account of 111 that still keeps it as sabotage of the +1.
- A showing that Cluster 11 is a generator rather than a diagnostic output.
- John rejecting the version split, the frozen count, or a placement on the register.
- A later correction that the causal overlay has been treated as the object. That would be a failure of this page, not a discovery.

1.8 Related pages

- **Human Insecurity and the Correction Loop** — connects individual insecurity, conformity, LLM mannerisms, and recursive correction dynamics with the cluster topology.
- **Cognitive Warfare Mass Psychology** — applies population-scale cognitive operations and classification power to the wider architecture.
- **C1 Before C2** — protects cluster placement and risk interpretation from intervention before clarification.
- **Outnuancing** — keeps the topology open to frame examination rather than treating its current organization as final.
- **10+1 Metaflux** — remains a distinct mutually corrective calibration process rather than another mass-psychology cluster.
- **Correction Metabolism** — tracks whether later evidence changes item placement, claim status, or the governing map.
- **G42 — Visualize the 11+1 Mass-Psychology Clusters** — preserves the interactive visualization goal for nodes, vectors, clusters, time, context, and legend.
- **Visible Interactive Deep Ethical Topology Flux Scores** — explores how the architecture and its corrections could become visibly inspectable over time.

1.9 Recent high-reach independent-media companion

Anthropic BEGS Pope To Declare AI 'Personhood' — Breaking Points. Published **2 October 2026**. YouTube displayed approximately **254,000 views** when checked on **9 October 2026**.

Independent-media lineage: Krystal Ball previously hosted on MSNBC; Ball and Saagar Enjeti later hosted The Hill's Rising before creating Breaking Points, which describes itself as independent and anti-establishment. Breaking Points — About · Career and launch history

Why it belongs here: The segment compresses questions about A.I. welfare, consciousness, personhood, institutional authority and religious judgment into a provocative title. The compression itself is a test object: what was actually requested, inferred, dramatized or left unresolved?

On this page, test the video specifically against **11+1 Version 2 — Mass-Psychology Topology**:

- Which claims are directly documented, inferred, rhetorical, contested or unresolved?
- What does the host or guest preserve, compress, omit or substitute—and does this page repeat any of those transformations?
- Which incentives, authority relations and affected parties remain outside the visible frame?
- What evidence or later outcome would correct the speaker, audience, platform or **ACCM Deep Ethics Project** reading?

Provisional selection. Reach makes the framing socially consequential; it does not settle the claims. The video can be replaced when a closer, stronger or more inspectable specimen appears.
