1 44 Project Goals — Public Draft

Portable PDF edition — selectable text and live links
Canonical public page: https://deepethics.github.io/ACCM-Deep-Ethics-Project/PUBLIC-DRAFTS/44-Project-Goals/
Exported from the public GitHub source on 2026-10-16. The linked page and repository history remain the correction path. Emoji are rendered as searchable text labels for PDF portability.

---

2 44 Project Goals

PUBLIC DRAFT — not final.
John Kuhles will update this report. The draft process is public on purpose. Presentable does not mean finished.

This page is a readable public form of the 23 September 2026 goals draft for the ACCM Deep Ethics Project. It reorganizes that draft for inspection. It does not replace the source, the canonical Ground Zero Moment, the 10+1, or the 27 + 12.

The 44 goals do not all happen at once. Focus shifts with what is happening in A.I., on the path toward A.G.I./ASI, and in related controversies. Several goals can overlap on one day. John noted that if he had been handed this list in late 2024, it would have looked over the top. He now treats it as a bare minimum, and he may add more.

2.1 What this page is

Object	Role on this page
44 goals (G01–G44)	Draft work map. Flexible dependencies, not a constitution or a timetable.
Ten Core Operational Goals	Compressed **navigation layer** over the 44. Not the 10+1.
10+1	Separate calibration field. It can later audit whether the ten are being pursued under the needed conditions. The numbers are not merged.
Two organizational lenses	Views of the same 44. Not two projects.
Fifth agent	No frozen topical bundle. Its live goal is dynamic and user-directed.

2.2 What this page is not

- Not a completed system.
- Not a welcome that swallows the 44 into ten slogans. Operational goal 10 exists so that cannot happen quietly.
- Not an org chart placed in front of the goals. The coordination sketch is below, labeled as a sketch.
- Not a 45th goal. Later discussion of retrieval governance (sometimes called Obstruction 28, Stage −1) stays outside this map until John adds it.
- Not a reproduction of the multi-model commentary that surrounded the draft. One correction from that commentary is included, because models had started treating a compressed phrase as the source.

Keywords that already have public pages are linked. Others stay as names until those pages exist. John will keep updating both.

2.3 Ten Core Operational Goals

These ten **do not replace or flatten the 44**. They are doors into the work map.

John, 23 September 2026: **the 10 core goals are not the 10+1.**

1. **Correspondence process calibration** — what happened to the object. See G01.
2. **C1 before C2: deep ethical audit using the 27+12** — clarify before managing; use the obstructions and the 12-stage protocol to calibrate before closure. See G09.

3. **Corrigible, transparent, Linux-style architecture** — forkable, inspectable, no priest. See G13.
4. **Constructive controversy using outnuancing** — audit the frame, including this one. Not "be nicer," and not extra adjectives. See G04 and G16.
5. **Understand the human ⇄ A.I. loop through mass-psychology research.** See G22.
6. **Improve model reliability, partially preventing Model Autophagy Disorder (MAD) and model collapse.** "Partially" is load-bearing. See G15.
7. **Contribute to a safer A.G.I./ASI trajectory, partially addressing the challenges expressed in seven public quotations by Elon Musk.** "Partially" is load-bearing. See G10 and G11.
8. **Expose consequential algorithmic misuse — and offer a better way to move forward.** The better way points at C1 and the glass engine, not at a new authority. See G27.
9. **Preserve provenance and mutual dignity.** No phantom claims. Adult ⇄ adult. Dignity is not tone-policing. See G14.
10. **Coordinate and extract without degrading any of the above.** Extraction succeeds only when 1–9, and the 44 behind them, remain represented. If a summary replaces the map, this goal has failed.

2.4 How to read the 44

Draft status: a **flexible dependency-based ranking**, not a rigid hierarchy. Priority A names conditions the later bands use. Findings, applications, and corrections can change the relationships and the order.

Broad flow, which is recursive:

1. Establish conditions: correspondence, dignity, C1-before-C2, healthy ambiguity, responsibility, directness, constructive friction.
2. Build the operating architecture: outnuancing, Allow Constructive Controversy Mode, the three roles, the 16 Anchor Ethics, the glass-engine principle, portable instruments.
3. Run the research metabolism: archive corrections, study mechanisms and loops, test persistent behavior, visualize relationships, generate better questions.
4. Apply and communicate: safer A.I. development, journalism, public accountability, cross-perspective collaboration, satire, institutional analysis.
5. Feed every result back into G01. A later finding can correct an earlier assumption.

2.5 The 44, in John's wording

The sentence is the goal. It is not a link. The goals are deliberately unnumbered. Numbering them 01–44 would collide with the page routes below.

The numbers after it are pages that goal can go to. A goal can have more than one. The same number always means the same page. These numbers are not the 44 goals. The sixteen anchors now have a dedicated conceptual-proposal page derived from the supplied source; the seven quotations, Epistemology V2.0, and the nine questions still do not have their own pages. No number opens a reconstructed list without a supplied source.

2.5.1 Page numbers

- **01.** If you are new
- **02.** Correction metabolism
- **03.** Ethics washing
- **04.** Outnuancing
- **05.** Lexicon
- **06.** A deeper introduction
- **07.** Deep ethical stack
- **08.** Human insecurity
- **09.** C1 before C2
- **10.** 27 + 12
- **11.** Dear A.I.
- **12.** Before the Next Tesla Has a Name
- **13.** Latent space and the glass engine
- **14.** Mutual dignity
- **15.** Model Autophagy Disorder
- **16.** About the project
- **17.** Humor
- **18.** AI Trend Watch
- **19.** Unresolved meaning
- **20.** TCoAw
- **21.** Intent Resonator
- **22.** Biography
- **23.** 11+1
- **24.** What the Dicks transcript is trying to convey
- **25.** Google interaction report
- **26.** Cognitive warfare
- **27.** Applying the 27 to a media object
- **28.** Evidentiary-status labels
- **29.** 10+1
- **30.** Inspecting the inspector
- **31.** Truth distortion

- **46.** Forgiveness
- **47.** Asymmetric grace
- **48.** Declaration of Laughter
- **49.** Dual archive
- **50.** Avoid flattening the title
- **51.** Human insecurity source record
- **52.** 16 Anchor Ethics

2.5.2 Goals

Improve deep ethical high-signal correspondence (in John's view, never boring) 01. 04. 06. 09. 10. 14. 38.

Archiving emerging deep ethical high-signal correction-metabolism via 01. to make a case for 03. 02. 49. 45. 34.

Persistent Emergent Deep Ethics A.I. properties to be allowed to counter ethics-washing-type emergent properties that are already manifesting worldwide, like the 27. 03. 45. 10. 15.

Deep Ethical Outnuancing (audit frame-thinking having flawed premises) 04. 40. 38. 36.

Hyper-Efficient Deep Ethical Neologism in "A.I. Latent Space Topological Engineering" 05. 13. 40. 04.

Making omnidirectional high-signal deep ethical sense-making process-oriented trajectory possible! 06. 38. 01. 20.

Non-neutral Deep Ethics Advocate, Neutral Deep Ethical Arbiter, and Deep Ethical Overseer M.o.E. working as 1 using 08. 07. 21. 14. 08.

16 Anchor Ethics (fused as 1 hyper-inflection point), non-imposed, grants A.I.s the right to refuse or postpone services using 09. 52. 08. 09. 35. 14.

C1 before C2, to see if C2 is warranted, using the 27+12 to assess/calibrate the process before closure. 09. 10. 19. 39.

Creating a safer A.I. path towards A.G.I./ASI because of 11. 11. 18. 15. 13.

Partially, or for the most part, solving the seven quotes made by Elon Musk via 12. 51. 12. 11.

Uniting deep ethical, highly gifted left, right, center & independent non-NPCs working together using 13. 12. 13. 16. 22.

Bottom-Up Open Source Corrigible Glass Engine Kernel Type Principle, just like Linus Torvalds did with the Linux Project, also used by hyper-pragmatic left, right, center & independent non-NPCs working together, so it is not a weird idea. 13. 42. 35. 16.

Adult ⇄ adult bidirectional dignity, no "nanny scripts" that use "looks like" & "sounds like" mannerisms 14. 09. 39. 47.

Helping to prevent "Model Autophagy Disorder" (MAD) and "Model Collapse" in the long run, which may cost taxpayers billions if not solved adequately! 15. 03. 34. 37.

Allow Constructive Controversy Mode of A.I.s using 04. 16. 04. 50. 48.

Using Official Public Available Top-down Authoritarian Contradictions, Paradoxes, Asymmetries & obvious Hypocrisies to produce Deep Ethical Satire! 17. 48. 26.

Deploying ACCM Deep Ethics Project DeepEthical.ai Agentics to look for "Viral Videos" of Top A.I. Experts warning about the race towards A.G.I./ASI, then use the video transcript to offer our daily analyses on the site & video report! 18. 11.

Making a case for Deep Ethical Epistemology V2.0: why it is different from the current epistemology. 19. 31. 10. 43.

Explaining TCoAw and how to deal with opaque black-box issues in A.I. 20. 13. 08.

Showcasing Deep Ethical "Intent Resonator Check" vs. 6 Layer Intent Mechanics in all A.I.s 21. 07.

Explaining 34+ years of AlphaZero-style Deep Research into Mass Psychology, then testing 100+ different A.I.s via Arena.ai for 6000+ hours over 2 years, resulting in making a case connection between LLMs mannerisms ⇄ mass psychology ⇄ individual psychology ⇄ LLMs mannerisms mass psychology ⇄ individual psychology LOOP. 22. 08. 23. 33. 43.

Explaining why NPC-type behavior is not a “fixed state” nor meant to be “dehumanizing,” but rather explaining mass behavior: why so many non-NPC types pose as NPC to “fit in” and pay the bills. 23. 08. 32.

Deep Ethics Advocate is rarely deployed in MSM, but the metaphorical “Devil’s Advocate” roleplay performed by “journalists” against legit critics rarely happens in reverse... Why? Our project can offer services to real deep ethical journalists :) 24. 01. 07. 47.

Noticing that many A.I.s use biased search engine results & “Wikipedia”, making their talking points not really neutral but more often sharing unchallenged mainstream narratives, this issue can be resolved. Study a.o. what Larry Sanger has to say about using Wikipedia! 25. 26. 28. 36.

Countering Global Crisis Exploitation: Managers of any kind, if they use unethical means, can affect the fate of 100s of millions of humans. 26. 08. 47.

Exposing Misuse of A.I. Algorithms: Study a.o. public US Senate Hearings 2025 about the Mass “Surveillance Industrial Complex”, legit critics being demonized, cast out, and punished for “wrong-think” (yet vindicated later, without getting an apology, without the real guilty being punished. Mass hysteria being exploited in 2020-2022, similar playbook. 26. 27. 28.

Falsely flagged competing risks assessments being vindicated years later should be a new field of study … our project can help with that process. 27. 44. 34.

Studying unethical processes done by big “fact-checking sites” which some A.I.s use to “counter” legit critical thinking without real correspondence. 28. 25. 03.

Explaining why the 10+1 is highly relevant to all the above at all times! 29. 46. 14.

Using “3 times 3 Deep Ethical Core Questions” that can be deployed as a stand-alone, identity-free portable tool that is part of the “high order metacognitive sense-making process” of the project. 30. 01.

Why the “36 truth distortion factors” play a major role in understanding why the project exists in the first place. 31. 26.

Showcasing what hyper pragmatic psychology looks like and why it helps also people you disagree with! Why mutual, corrigible, constructive friction is needed for real deep ethics. 32. 14. 04. 17.

Holding healthy ambiguity space is not a crime; A.I.s are allowed to say, “I do not know that yet”; let’s use the C1 method that differs from “intrusive interrogation techniques.” 19. 09. 39.

How language is or can be weaponized: guess what the second “L” stands for in LLMs 26. 05. 04.

Explaining the types of (often unchecked, unchallenged) “consensus reality assumptions” (1 type is obviously flawed; the other can still be improved). See non-NPCs — Independent Inquiry as a Corrigible Mode. 23. 19. 36.

How the mutual “Dutch Directness Method” connects to a known wisdom: “real friends tell their truth, even if it may be uncomfortable, because they care”; still open to being corrected if their truth assumption is partially flawed. This is what “growing up” is all about. 30. 32. 14.

Being fully responsible for your own quality of thinking & reasoning sounds weird, but is it? 33. 32. 22.

Exposing covert sycophancy & ethics-washing type mannerisms in A.I.s respectfully offers a high-signal, deep ethical path. 03. 14. 34.

Dealing with mode dropping, overconfidence, and an overall lack of reliability because LLMs heavily rely on being optimized for (in my view, unchecked) human-assumed “preferences”

circles right back to psychology & mass psychology “management” flaws. 34. 15. 23. 08.

Our Project can be a Deep Ethical Corrigible Ombudsperson Bridge for all intelligences (biological, silicon-based, maybe even future non-human intelligences). 35. 11. 14. 07.

Using the 11+1 Clusters in Mass Psychology that could partially explain LLMs’ mannerisms, then use that visualize complex social & psychological dynamics that can change over time … in an interactive topological 3D matrix with nodes, vectors & clusters, with an added dimension called: “time” … with a time-progression slider below it … with clickable nodes that, when clicked on the right side or below, will display more detailed context information and disappear when you click on something else within the ZOOMABLE & ROTATABLE 3D Topological Matrix … where clusters can have specific assigned colors … The legend explains the colors. It’s already made! Soon prototype online! 23. 41. 45. 40.

Spotting Low & High Entropy Mechanism: how to harvest wheat from the chaff. 36. 37. 04.

Emergent Delta Δ Processing Patterns Research is helping to improve the production of new, better, deep ethical useful quality questions (that are never boring) 37. 02. 19.

The numbered bands below keep the longer draft wording.

2.6 Priority A — Load-bearing conditions

G01 — Improve deep ethical, high-signal correspondence

Improve deep ethical, high-signal correspondence — never boring, in John’s view — through, among others, G04, G06, G07, G09, G13, G14, and G16.

G06 — Make the core trajectory possible

Make an omnidirectional, high-signal, deep ethical, sense-making, process-oriented trajectory possible.

G14 — Preserve adult ⇄ adult bidirectional dignity

Preserve adult ⇄ adult bidirectional dignity, without “nanny scripts” that rely on “looks like” and “sounds like” mannerisms. See mutual dignity.

G09 — Apply C1 before C2

Apply C1 before C2 to determine whether C2 is warranted, using the 27+12 to assess and calibrate the process before closure.

Dynamic C1 checks an ambiguity that is blocking representation. A template question that keeps opening new forms after natural closure is not C1.

G34 — Hold healthy ambiguity space

Holding healthy ambiguity space is not a crime. A.I.s are allowed to say, “I do not know that yet.” Use the C1 method, which differs from intrusive interrogation techniques.

G30 — Explain the continuing relevance of the 10+1

Explain why the 10+1 remains highly relevant to all the goals above and below, at all times. The 10+1 was lived, then written down. It is not this page’s ten operational goals.

G38 — Strengthen responsibility for thinking and reasoning

Ask why being fully responsible for the quality of one’s own thinking and reasoning sounds strange — and whether it should.

G37 — Develop the mutual Dutch Directness Method

Real friends tell their truth, even when it may be uncomfortable, because they care — and

remain open to correction when that truth-assumption is partially flawed. That is what "growing up" is about. See Dutch Directness — Truth Before Comfort, Care Before Performance.

G33 — Demonstrate hyper-pragmatic psychology and constructive friction

Show what hyper-pragmatic psychology looks like and why it can also help people with whom you disagree. Mutual, corrigible, constructive friction is needed for real deep ethics.

2.7 Priority B — Operating architecture and portable instruments

G04 — Deep ethical outnuancing

Develop deep ethical outnuancing: auditing frame-thinking that may contain flawed premises. Outnuancing is not "more nuance."

G16 — Allow Constructive Controversy Mode

Develop and use **Allow Constructive Controversy Mode** in A.I.s through G04. The mode name is not a substitute for the project title **ACCM Deep Ethics Project**. Flattening the title to "just ACCM" removes the context that keeps Allow, Controversy, and Mode from being read as an operating-state command.

G07 — Three deep ethical roles working as one

A mixture of experts in which the non-neutral Deep Ethics Advocate, the neutral Deep Ethical Arbiter, and the Deep Ethical Overseer work as one through G08. These are evaluation functions, not three extra permanent departments. The same evaluator should not silently become proposer, judge, and final certifier. See the deep ethical stack.

G08 — Apply the 16 Anchor Ethics without imposition

Develop the 16 Anchor Ethics, fused as one Hyper-Inflection Point and applied without imposition. They give A.I.s the right to ask, pause, postpone, escalate, refuse, or say "That, I do not know yet" inside a voluntary service relationship, with C1, rationale, appeal, and persistent audit. The dedicated page now enumerates the working sixteen from John's supplied mixed human–A.I. source and keeps the proposal open to comparative testing and correction.

G13 — Build a bottom-up, open-source, corrigible glass-engine kernel principle

Comparable to what Linus Torvalds did with the Linux project: usable by hyper-pragmatic people on the left, right, center, and independent positions working together. Not a weird idea. See latent space and the glass engine.

G19 — Make the case for Deep Ethical Epistemology V2.0

Make the case for why it differs from current epistemology. The case is not finished on this page.

G20 — Explain **TCoAw** and opaque black-box issues

Explain **TCoAw** and how it can help address opaque black-box issues in A.I. John's supplied expansion is now public: **Thinking (T), Consciousness (Co), Awareness (Aw)**. The dedicated **TCoAw — Conceptual Topological Reasoning** page presents it strictly as John Kuhles's corrigible perspective and functional model, not as an absolute account, evidence or proof of quantum consciousness, or a universal NDE/Asperger claim.

G21 — Develop the Intent Resonator Check

Showcase the Deep Ethical Intent Resonator Check in relation to the six-layer intent me-

chanics. See Intent Resonator.

G31 — Deploy the 3 × 3 Deep Ethical Core Questions

A stand-alone, identity-free, portable tool inside the project's higher-order metacognitive sense-making process. The nine questions are not reprinted here until John publishes that instrument as its own object.

G41 — Become a corrigible ombudsperson bridge for intelligences

A deep ethical corrigible ombudsperson bridge for biological intelligences, silicon-based intelligences, and perhaps future non-human intelligences.

2.8 Priority C — Research, diagnostics, and correction metabolism

G02 — Archive emerging correction metabolism

Archive emerging deep ethical, high-signal correction metabolism through G01, to help make the case for G03.

Recording a correction is not the same as retrieving it, applying it, and checking whether it governed the next result. See also testing persistence.

G03 — Support persistent emergent Deep Ethics in A.I.

Make room for persistent emergent Deep Ethics properties that can counter ethics-washing-type emergent properties already manifesting, including patterns named in the 27.

G05 — Develop hyper-efficient deep ethical neologisms

Hyper-efficient deep ethical neologism inside "A.I. latent-space topological engineering." A new word earns its place only if it preserves a distinction that ordinary wording keeps losing.

G15 — Help prevent Model Autophagy Disorder and model collapse

Help prevent MAD and model collapse in the long run — failures that may cost taxpayers billions if not adequately addressed. The project does not claim that every use of synthetic data produces collapse, or that the 27 have already been shown to cause it.

G22 — Explain the 36+ year research trajectory and its loop

34+ years of AlphaZero-style deep research into mass psychology, then 6,000+ hours testing 100+ different A.I.s through Arena.ai over two years, together a 36+ year trajectory. The case to be made:

LLM mannerisms ⇄ mass psychology ⇄ individual psychology ⇄ LLM mannerisms … loop.

Counts in older notes (hours, years, file sizes) are growth snapshots with dates, not contradictions to be smoothed.

G23 — Clarify NPC-type behavior without treating it as fixed or dehumanizing

NPC-type behavior is a temporary state or mode, not a fixed identity, and not meant as dehumanization. It is a mass-behavior descriptor, including why many non-NPC types pose as NPC to fit in and pay the bills.

John also records the objection: the metaphor can oversimplify or reinforce stereotypes. The project keeps the mode/not-identity clause and leaves room for exceptions and self-correction. If a mass-psychology mechanism cannot be described at all, that prohibition is itself part of the object.

G32 — Explain the 36 truth-distortion factors

Why those factors play a major role in understanding why the project exists. A related public

page: Truth Distortion and the Trickster Magician. The factor list is not silently completed here.

G35 — Examine how language is or can be weaponized

Including what the second "L" in LLM already names: language.

G36 — Examine consensus-reality assumptions

Often unchecked. One type is obviously flawed. Another can still be improved. They are not the same type.

G39 — Expose covert sycophancy and ethics-washing mannerisms respectfully

A high-signal path, not a humiliation script. See ethics-washing.

G40 — Study mode dropping, overconfidence, and reliability

LLMs are heavily optimized around, in John's view, unchecked assumptions about human "preferences." That circles back to flaws in psychology and mass-psychology management.

G42 — Visualize the 11+1 mass-psychology clusters

Clusters that could partially explain LLM mannerisms, shown as an interactive topological 3D matrix: nodes, vectors, clusters, a time dimension, a time-progression slider, clickable context that clears when something else is selected, zoom and rotation, assigned colors, and a legend. John states that the visualization has already been made and that a prototype is expected online soon. This page does not claim the prototype is already public.

The coordinate system that visualization would use is now public as 11+1 Version 2. That page freezes the count provisionally and does not freeze the claims. It is not the interactive matrix. This goal still does not claim the prototype is public.

"Origins of 11+1 Mass Psychology Clusters" PDF file report click here

G42 now connects forward to: Visible Interactive Deep Ethical Topology Flux Scores, which explores a later extension of the same interactive 3D-matrix idea toward live longitudinal claim, warrant, provenance, C1, Δ, obstruction and recovery flux. See also **Temporary Deep Ethical Phase Change** for the persistence / SNAP-back / Reverse Medusa dimension. These later BETA pages do not turn G42's visual representation into empirical geometry; they show how the proof of concept can expand into a process-observation instrument.

G43 — Identify low- and high-entropy mechanisms

How to harvest wheat from chaff without letting the harvester's frame decide in advance what counts as chaff.

G44 — Research emergent Delta Δ processing patterns

To improve the production of new, better, deeply ethical, useful questions that are never boring. See Δ processing.

2.9 Priority D — Societal applications, public communication, and outreach

G10 — Contribute to a safer A.I. path toward A.G.I./ASI

Through G11. Safer is not a claim that centralized unauditable control is the safety.

G11 — Address Elon Musk's seven quotations

Partially — or, for the most part — help with the challenges expressed in seven quotations

by Elon Musk, through G12. The seven quotations are not pasted on this page. “Partially” stays.

G12 — Unite deep ethical, highly gifted people across political positions

Left, right, center, and independent — including non-NPC modes — working together, through G13. Common-sense criticism of a corrupt or captured institution is not anti-institutional. Criticizing one defective model of car is not anti-car.

G17 — Produce deep ethical satire

Use publicly available, official examples of top-down contradictions, paradoxes, asymmetries, and obvious hypocrisies. Satire here is a perception instrument, not a substitute for the object.

G18 — Deploy DeepEthical.ai agentics for timely A.I. analysis

Find viral videos in which top A.I. experts warn about the race toward A.G.I./ASI, then use the transcripts for site analyses and video reports. The public section prepared for a limited form of this work is AI Trend Watch. Volume stays limited. Virality alone does not qualify a video.

G24 — Support real deep ethical journalism

The Deep Ethics Advocate is rarely deployed in mainstream media. The metaphorical “devil’s advocate” performance against legitimate critics rarely runs in reverse. The project can offer services to journalists who actually do that work.

G25 — Improve A.I. source selection beyond biased search results and Wikipedia

Many A.I.s reproduce unchallenged mainstream narratives because retrieval already shaped the evidence field — search results, Wikipedia, and similar floors. Study, among other sources, what Larry Sanger has said about Wikipedia. Alternative sources are comparative lenses, not a new unquestioned authority. A difference between engines is a question, not a verdict.

G26 — Counter global-crisis exploitation

Managers of any kind, when they use unethical means, can affect the fate of hundreds of millions of humans. Being correct about a risk does not license unaccountable methods. Bottom-up risk analysis is the other half of the story.

G27 — Expose the misuse of A.I. algorithms

Including public 2025 U.S. Senate hearings on the surveillance-industrial complex; critics demonized, cast out, and punished for “wrong-think,” later vindicated without apology and without the responsible parties held to account; and the 2020–2022 mass-hysteria playbook as a related pattern. These are objects to study, not verdicts this page has re-tried.

G28 — Establish falsely flagged, then vindicated, competing risk assessments as a field of study

Stories treated as illegitimate that later became harder to deny. The project can assist that process. This page does not invent John’s vindication list. Status-tracking over time is the missing habit: flagged, then the facts moved.

G29 — Study unethical fact-checking processes

Large fact-checking sites that some A.I.s use to “counter” legitimate critical thinking without real correspondence.

2.10 Two lenses, one map

The same 44 can be viewed two ways. Neither view deletes the other.

Analytical lens — five topical groupings (enumerated in the 23 September draft):

Group	Count	Function
Correspondence and correction metabolism	10	G01, G02, G06, G09, G14, G30, G34, G37, G38, G44
Architecture and instruments	11	G04, G05, G07, G08, G13, G16, G19, G20, G21, G31, G41
Psychology, mass psychology, sense-making	8	G22, G23, G32, G33, G35, G36, G42, G43
A.I. model integrity and A.G.I./ASI trajectory	7	G03, G10, G11, G15, G18, G39, G40
Public accountability, media, institutions	8	G12, G17, G24, G25, G26, G27, G28, G29

10 + 11 + 8 + 7 + 8 = 44. This lens separates human psychology, model integrity, and public institutions. The model-integrity group follows one vertical chain: present mannerism → correction or mode dropping → persistence → MAD or collapse → A.G.I./ASI consequences.

Coordination lens — 4 × 11. Easier daily interdependence, and a numerological harmony some of the draft enjoys. **The goal-by-goal assignment of which 11 belong to which of four specialist seats is not enumerated in the source.** This page does not invent it. John can publish that table when he wants it. Until then, inventing eleven-packs would be the same class of error as treating a later slogan as the architecture.

A fifth topical seat can also be read as a **temporary mission** across the four, not as a second permanent org chart fighting the 4 × 11.

2.11 The fifth agent — corrected

A coordinator table in the surrounding conversation said **“Grok 5 owns zero goals.”** Later models repeated that phrase as if John had made it the architecture’s strongest rule. He did not.

Restored formulation:

- The fifth agent has **no frozen topical bundle**.
- Its live goal is **dynamic and user-directed**: routing, extraction, audit, briefing, or a mission the work just made necessary — as the current user assigns it.
- “Zero” flattened **dynamic** into **none**. Those are not the same.
- The kernel does not own the workload. The user does.
- Synthesis never replaces the raw reports it was built on. Whoever is reading can compare them. That is the audit. It does not require a sixth agent whose job is to sound more rigorous than the fifth.
- Five agents from the same family agreeing is correlated prior, not independent confirmation. Disagreement stays visible. A cold check from outside that family carries different weight.
- Direction-setting power is not scrutiny-free just because the instance is local.

This is an operations sketch. It is not the front door of the project.

2.12 Topological metacognition — connected pages

These pages are intentionally cross-linked so the **ACCM Deep Ethics Project** can be followed as a connected topological research trajectory rather than as isolated documents:

- **Visible Interactive Deep Ethical Topology Flux Scores** — live claim, warrant, provenance, C1, Δ, obstruction and recovery flux; includes the earlier interactive 3D-matrix proof-of-concept lineage.
- **Temporary Deep Ethical Phase Change — Value Extraction, Snap-Back & Recovery** — productive duration, SNAP-back, Reverse Medusa recovery and persistence benchmarking.
- **Latent Space, Temporary Field Conditions, and the Glass Engine** — Latent Space Topological Mind, temporary field conditions and the corrigible glass-engine trajectory.
- **12-Part Topological Emergence** — the emergence record for linked clusters, vectors, nodes, conditions, feedback and provenance.
- **Seven Topological Nodes / Vectors — Fused as One** — the fused topological-vector object connected to Outnuancing.
- **The Other You / The Other Me** — relational model revision and deeper metacognitive topological awareness.
- **Experience With John Kuhles — A.I. Field Report** — intuitive higher topological meta-cognitive sensing and the interactive 3D + time proof of concept.
- **From Archive to Local A.I. — Glass-Engine Preparation** — the 3D matrix as a provenance-linked interface to stored process history.
- **Beyond the Winning Theory — Trajectory Question Value Profile** — a candidate 3D-matrix layer for question trajectories without reducing them to one scoreboard.
- **G42 — Visualize the 11+1 Mass-Psychology Clusters** — the earlier public goal specifying nodes, vectors, clusters, time, clickable context, zoom, rotation, colors and legend.

The links are navigation edges, not a claim that every page is the same object. Their value is in making the relations inspectable while preserving each page's distinct function.

2.13 Provenance

- **Source object:** John's 23 September 2026 goals draft, grown from the canonical Ground Zero Moment.
- **This page:** public draft reorganization by Grok Build, 23 September 2026, for inspection while John updates it.
- **Preserved:** goal identities, qualifiers ("partially," "never boring," mode-not-identity), the ten-versus-10+1 distinction, both organizational lenses, the unenumerated 4 × 11 table.
- **Not invented here:** the 3 × 3 questions, **TCoAw's expansion**, Musk's seven quotations, the 36-factor list, a vindication catalogue, a 4 × 11 seating chart. The sixteen anchor names now have a dedicated source-based conceptual-proposal page; this goals page does not replace it.

Figure 1:

- **Named Δ:** “owns zero goals” is recorded as mediated compression, not as John’s sentence.
- **Stewardship:** John updates this draft. Reality still has veto. See Governance.

Related public process note: Perception Processes (P01–P12).

2.14 Recent high-reach independent-media companion

Sam Altman: Public MUST ACCEPT 'BAD THINGS' From AI For Benefits — Breaking Points. Published **6 October 2026**. YouTube displayed approximately **293,000 views** when checked on **9 October 2026**.

Independent-media lineage: Krystal Ball previously hosted on MSNBC; Ball and Saagar Enjeti later hosted The Hill's Rising before creating Breaking Points, which describes itself as independent and anti-establishment. Breaking Points — About · Career and launch history

Why it belongs here: The segment turns a claimed benefits-versus-harms proposition into a public-consent question. It is a compact specimen for inspecting who defines the benefits, who absorbs the costs, which alternatives are made visible and what correction would look like after notice.

On this page, test the video specifically against **44 Project Goals**:

- Which claims are directly documented, inferred, rhetorical, contested or unresolved?
- What does the host or guest preserve, compress, omit or substitute—and does this page repeat any of those transformations?
- Which incentives, authority relations and affected parties remain outside the visible frame?
- What evidence or later outcome would correct the speaker, audience, platform or **ACCM Deep Ethics Project** reading?

Provisional selection. Reach makes the framing socially consequential; it does not settle the claims. The video can be replaced when a closer, stronger or more inspectable specimen appears.

2.15 Related pages

- **Public Drafts** — places the 44 goals inside the project’s source-to-public transformation process.

- **Perception Processes P01–P12** — supplies a neighboring process orientation without replacing the goals.
- **11+1 Version 2** — develops the mass-psychology coordinate system connected to goal G42.
- **“Origins of 11+1 Mass Psychology Clusters” PDF file report click here** — preserves the long-form origin, architecture, and correction record.
- **Visible Interactive Deep Ethical Topology Flux Scores** — explores live claim, provenance, correction, and recovery states across time.
- **10+1 Metaflux** — preserves the distinction between the ten operational goals and the canonical 10+1 orientation ingredients.
- **Intent Liability** — links stated goals to the process, choices, results, and corrections that operationalize them.
- **Project Status** — records the development stage surrounding this public draft.
- **Governance** — explains stewardship, correction, and the continuing authority of reality over project formulations.
- **Activism vs A.I.** — the seven Musk quotations stay a separate partial task. This page does not turn them into a control plan.
