1 Public Drafts

BETA — presentable does not mean final

This directory contains public-facing documents derived from longer research notes, conversations, experiments, and source material.

The source archive is not intended to be reproduced here wholesale. A public draft may reorganize, compress, clarify, and improve readability while preserving the original object's intent, qualifiers, relationships, and epistemic status.

The working transformation is:

SOURCE OBJECT ʘ → identify irreducible intent / qualifiers / relationships → public-language transformation → expose meaningful Δ → correspondence check → revise if fidelity dropped → PUBLIC BETA DRAFT

During drafting, transformations may be distinguished as **preserved**, **compressed**, **reorganized**, **omitted for entry level**, or **interpreted / proposed**.

A public draft remains downstream of its source. It does not retroactively redefine what the source originally meant.

1.1 Current public drafts

- External Omnidirectional Auditing Mannerisms — draft of a portable method: the audit is audited by the same standard, in the same pass. The nine outside sessions are not reconstructed here.
- Perception Processes (P01–P12) — an early public version of the process-oriented P01–P12 object, including its connection to better questions and correction metabolism.

Professional presentation without professionalized flattening.

1.2 Connected reference edition

The Outnuancing Network contains public source-based syntheses with stable concept addresses and explicit relations. New experiment refinements and navigation groupings are labeled as editorial contributions.

1.3 Related pages

- **Perception Processes P01–P12** — presents a process-oriented tool without turning process into verdict, proof, or closure.
- **44 Project Goals** — organizes the project's public goals while retaining draft status.
- **External Audit** — demonstrates a portable draft whose audit is examined by the same standard.
- **Delta Processing** — makes source-to-draft transformations and losses visible.
- **Dual Archive** — separates readable public synthesis from the record required to inspect it.
- **Outnuancing Network** — contains connected source-based public syntheses with stable addresses.
- **Provenance** — preserves the sources and transformation records behind public drafts.
- **Project Status** — explains how BETA, DRAFT, experimental, and provisional materials should be read.
