1 5G Controversy

BETA living inquiry · opened 30 October 2026

Explore the Project Avalon inventory: pages 1–56, 144 investigation topics · Open the final batch.

Health, deployment, dual use, public agency and the quality of disagreement and agreement.

The **5G** (fifth-generation mobile communications) controversy concerns health, cumulative exposure, environmental effects, infrastructure decisions, military applications, surveillance, commercial incentives and public agency. It also concerns how those questions are represented. John Kuhles uses **Anti-Unsafe-5G** to preserve a conditional objection: deployment and safety claims should withstand scrutiny, and safer technical choices should remain open.

> “When claims are still in the hypothesis or investigative stage, I clearly distinguish those as my own insights, patterns, or questions for scrutiny—never as settled fact.”
>
> — **John Kuhles [parrot] [butterfly] [tree]**, statement supplied 30 October 2026

This inquiry draws on the 22 supplied files, representing 20 distinct files after two exact duplicate pairs are accounted for, the supplied Google **A.I.** (artificial intelligence) exchange, and the accompanying autobiographical account. Scientific findings, institutional positions, legal decisions, author arguments, investigative connections and forecasts remain identifiable. The larger 10+ GB **HTML** (HyperText Markup Language) archive John describes is a separate collection.

1.1 Anti-Unsafe-5G and the origin of the inquiry

Here **RF** (radiofrequency) identifies the radio-frequency range; **EMF** (electromagnetic field) names the broader field category.

John traces his interest to the mid-1990s: it began through conversations with his friend Rinus Nienhuis, a licensed amateur radio operator who had taken an RF course in the Netherlands. Rinus lived in Amsterdam and later Beverwijk. John followed StopUMTS.nl before creating his Stop5G Facebook group and Stop5G.net during 2017–2019, and interviewed two building biologists and EMF consultants in the early 2000s, before 4G and 5G.

John describes the Stop5G Facebook group and Stop5G.net as the largest of their kind worldwide. His personal account also links the loss of Iris in December 2019 to a deeper investigation of root causes, injustice and system processes, from which work such as 10+1 developed. His global ranking description remains part of that personal account.

The supplied discussions repeatedly use an unsafe-car analogy: criticizing particular cars or deployment conditions does not, by itself, establish opposition to cars or technology as a whole. Removing **unsafe** changes the represented object of criticism. The same distinction appears in John's texts about institutions and people. It preserves the actual objection while leaving its factual basis open to examination. S13 S17 S18 S20

John's stated position and each other participant's own position remain the starting objects for comparison. The Search Engine Bias case follows the disputed transformation of John's question about the Hague bird deaths through publication and later A.I. accounts.

1.2 Process quality beyond agreement and disagreement

The **ACCM Deep Ethics Project** develops **ACCM** (Allow Constructive Controversy Mode). It makes the quality of the inquiry itself inspectable. Its 1888 intelligence-properties taxonomy treats intelligence through capacities such as perceiving, distinguishing, relating, remembering, imagining, judging, evaluating, learning, correcting, adapting, coordinating, examining one's own processing, noticing consequences and remaining corrigible. The fourteen-part taxonomy is the project's instrument within an 1888 thought experiment, rather than an archival document from 1888.

The 10+1 ingredients keep self-honesty, openness, learning, inquiry, correction on merit, independence, care, wonderment, non-projection, refusal of self-deception and forgiveness mutually corrective. They apply to the researcher, the critic, the institution and the AI summarizing them.

PQCE (Process Quality Calibration Evaluation) asks what the processing preserves, discovers, improves or makes possible. Meta Processing keeps the route from intent through processing to consequences available for examination. Beyond Agreemurmelism makes agreement and disagreement themselves subject to evaluation.

Applied to this controversy, that means recovering the actual claim before evaluating it, retaining conditions such as **unsafe**, asking an answer-changing clarification when the object is ambiguous, tracing claims to their supporting sources, and checking whether corrections govern the next comparable answer. A warranted finding can support, challenge or leave a claim unresolved. Equal scrutiny does not require equal evidentiary weight.

The supplied AI transcripts record disputes about categorical dismissal and also contain sweeping agreement, including assertions by AIs about rigged training data or their own hidden internal mechanisms. Those passages provide evidence of what the models generated. They do not independently disclose the systems' training history or establish the cause of a refusal. The visible response can be examined without inventing its hidden cause. S16 S18 S19

A source-based summary also remains open to this test: did it preserve the person's position and the source's actual result, or did its choice of category, excerpt or qualification redirect the inquiry?

1.3 Health questions and cumulative exposure

1.3.1 Exposure conditions

"5G" names a communications generation, rather than one exposure condition. Frequency, modulation, pulse structure, transmitted power, antenna pattern, distance, traffic, duration and the receiving tissue all matter. The **IET** (Institution of Engineering and Technology) book treats exposure assessment and reduction as engineering problems, including uplink and downlink exposure, monitoring, antenna design and network management. Its final chapter discusses both possible increases from densification and possible reductions through massive **MIMO** (multiple-input multiple-output) antenna systems and lower transmit power. S07

John's central question concerns repeated and combined exposure from phones, base stations, Wi-Fi, Bluetooth, smart meters and other connected devices. His alcohol-drop analogy illustrates a concern about accumulation and limited choice. The supplied discussion itself distinguishes that illustration from precise science. A quantitative RF claim needs an exposure history and a biological response model; an alcohol analogy does not supply a conversion from RF exposure to disease risk. S13 S14

For investigation, aggregate exposure from several sources, changes in exposure over time, and accumulation of biological injury are distinct questions. An instantaneous measurement answers a different question from a longitudinal study. A useful record specifies frequency and waveform, peak and time-averaged levels, measurement uncertainty, duration, outcomes and relevant co-exposures.

1.3.2 Non-ionizing radiation and biological interaction

RF (radiofrequency) photons do not have enough energy to directly ionize atoms in the way X-rays do. That physical distinction does not establish that RF cannot interact with tissue or produce harm under any conditions. Heating is an established interaction, and biological effects and proposed mechanisms require evaluation at their actual exposure conditions. The **NTP** (National Toxicology Program) rodent programme reported heart tumour findings in male rats and **DNA** (deoxyribonucleic acid) damage under its study conditions. Those experiments used second- and third-generation (2G/3G) signals and whole-body animal exposures, rather than a direct test of contemporary 5G deployment.

Pall argues for **VGCC** (voltage-gated calcium channel) activation and downstream oxidative, neurological, reproductive and other effects. The epigenetics paper discusses DNA and gene regulation; Trower emphasizes reproductive and intergenerational risks. These contributions have different forms: a compiled scientific argument, a student research paper and a public-facing report. Their cited experiments should retain their original species, signal, dose and endpoints when used in a 5G argument. S03 S04 S05 S06

The foil-in-a-microwave example in the discussion concerns electrical arcing under particular field and material conditions. It cannot by itself establish equivalent effects around particles in tissue under telecommunications exposure. That proposed interaction is a specific hypothesis requiring a matching physical model and experiment. S13

1.3.3 Microwave sickness and IEI-EMF

The literature uses terms including **microwave sickness**, **microwave syndrome**, **EHS** (electromagnetic hypersensitivity) and **IEI-EMF** (idiopathic environmental intolerance attributed to electromagnetic fields). Reported symptoms include headache, fatigue, sleep disturbance, dizziness, concentration difficulty, memory complaints and irritability. A symptom report, a measured association, a proposed mechanism and a causal diagnosis are different research objects.

Hutter and colleagues' 2006 study examined 365 residents near mobile base stations. It found associations between measured exposure and some symptoms, strongest for headaches, while finding no significant effect on sleep quality. Preserving both results makes the study more informative than a general statement that every symptom was associated with exposure.

The Genuis and Lipp review addresses clinical reports, conflicting research and the substantial personal and social burdens associated with EHS. These questions warrant precise investigation and dignified treatment of the people reporting symptoms.

1.3.4 Funding and source independence

John's earlier request specifically sought publications without industry sponsorship. Funding disclosures must remain visible alongside study design, methods and results. A declaration of no competing interests and an explicit statement of no funding answer different questions.

Publication	Disclosed support	Role in this inquiry
Genuis and Lipp 2012	Explicitly states no funding and no conflicts of interest	Peer-reviewed clinical and literature review; publication
Hutter and colleagues 2006	Scientific Medical Funds of the Mayor of Vienna and the Government of Carinthia	Publicly supported observational study; full text
Naren and colleagues 2020	Qatar National Research Fund, a member of Qatar Foundation	Peer-reviewed pre-5G device measurements and review; S01
Deruelle 2024	Financial support and sponsorship declared nil; no conflicts declared	Peer-reviewed review and interpretive argument; S08
Simkó and Mattsson 2019	Deutsche Telekom Technik GmbH	Industry-funded review retained in the archive and excluded from the non-industry-funded subset; S02

The Simkó and Mattsson review examined 94 publications at 6–100 GHz. It reports biological responses in many experiments while finding that inconsistent results and study quality prevented a reliable health assessment from that collection. Its funding statement appears on PDF page 17. Neither the reported responses nor the authors' uncertainty should disappear from a summary. S02

The **IARC** (International Agency for Research on Cancer) 2011 evaluation classified RF electromagnetic fields as possibly carcinogenic to humans, Group 2B. That is a hazard classification based on the evidence then assessed. It does not provide an estimated risk for every contemporary 5G exposure.

1.4 Government records and the historical symptom literature

The historical record extends well before 5G. It includes military reviews of occupational findings, translations of Soviet research, bibliographies, diplomatic records and investigations of the Moscow Signal. **Declassified**, **unclassified public report**, **bibliography** and **government translation** describe different kinds of records.

Record	What it contributes
NASA (National Aeronautics and Space Administration), technical translation TT F-708, February 1972	Public translation of the 1970 Soviet volume edited by I. R. Petrov, *Influence of Microwave Radiation on the Organism of Man and Animals*. Human and animal research, including symptom comparisons. Report

Record	What it contributes
Navy Glaser bibliography, 1971 and subsequent editions	Catalogues reported biological effects and clinical manifestations. The 1976 compilation contains over 3,700 references. A bibliography identifies a research record; its entries retain their individual methods and conclusions. 1976 compilation
DIA (Defense Intelligence Agency), DST-1810S-074-76, March 1976	Formerly classified U.S. intelligence review of research in Eurasian communist countries. Printed page 8 lists symptoms including fatigue, headache, dizziness, sleep and concentration disturbances. Report scan
CIA (Central Intelligence Agency), Moscow Signal assessment, February 1976	Describes increased concern after changes in signal characteristics and exposure duration. Released record
State Department telegram 166451, July 1976	Contemporary medical position that a causal relationship with embassy health problems had not been established. Released record
NIOSH (National Institute for Occupational Safety and Health), bibliography supplement, November 1977	Additional literature, including Soviet and Eastern European research. Government record

The DIA review's multinational scope includes the Soviet Union, Poland, Czechoslovakia, Bulgaria, Romania and Hungary. It is a U.S. review of work from those countries; that provenance differs from independently released archives issued by each country. Its discussion of potential industrial and military consequences of stricter standards is relevant to scrutiny of institutional incentives.

The Moscow Signal collection documents secrecy, exposure investigations and Projects PANDORA and BIZARRE. It supplies a historical basis for studying what officials investigated, disclosed and concluded. The existence of those investigations and a finding of neurological injury are separate historical claims.

1.5 Safety standards and public accountability

1.5.1 What a safety claim needs to specify

John asks what authorities mean by guidelines, standards, protocols, acceptable exposure and long-term safety. A useful comparison identifies the endpoint protected, the population, the averaging period, the test method, the relevant law and the process for revising it. The supplied international chart mixes national limits with precautionary proposals, building-biology recommendations and background exposure levels. Those entries cannot be read as one current legal comparison. S12 S13

The **ICNIRP** (International Commission on Non-Ionizing Radiation Protection) 2020 RF guidelines cover 100 kHz–300 GHz and include dosimetry and biological-health evidence appendices. Their restrictions are built around effects ICNIRP regards as substantiated. Criticism therefore concerns which evidence meets that threshold and whether the resulting limits protect people under relevant conditions. Describing ICNIRP as having never considered non-thermal research would erase part of the actual disagreement.

A document's title as a guideline or standard does not, on its own, establish the quality of its supporting science. Similarly, a website liability disclaimer does not establish whether a publication is admissible in court or whether its scientific conclusions are correct. The operative wording, version and relevant legal or scientific proposition need to be examined separately.

1.5.2 Court decisions and 2026 proceedings

The **FCC** (Federal Communications Commission) is the U.S. communications regulator. In Environmental Health Trust v. FCC, decided 13 August 2021, the U.S. Court of Appeals for the District of Columbia Circuit granted the petitions in part and required a reasoned explanation on non-cancer effects, testing procedures, children, long-term exposure and environmental effects. The court identified legally insufficient reasoning; it did not decide the scientific controversy or order a 5G ban.

The FCC's September 2026 notice, released 17 September and published 22 September, sought comments on the remanded issues. It stated that the existing rules remained effective. Its listed comment deadline was **22 October 2026**, before this page's record date.

The **HHS** (U.S. Department of Health and Human Services) request for information, published 21 September 2026, asks about exposures, health outcomes, cumulative neighbourhood exposure, children, environmental effects and research priorities. Its listed deadline was **21 October 2026**. These are formal opportunities for institutional review; their publication records the questions being examined rather than determining their answers.

The Dutch court's 25 May 2020 account, ECLI:NL:RBDHA:2020:4461, states that Stop5GNL's requested prohibition was rejected and spectrum auctions could proceed. The State's commitments to monitoring and intervention if limits or scientific assessments changed also belong in the record.

1.5.3 Schools fire stations and local decisions

The **IAFF** (International Association of Fire Fighters) position adopted in August 2004 opposes using fire stations for cellular antennas pending research meeting its stated safety conditions. This is an occupational precautionary position predating 5G. Its pilot findings, union policy and any later legal exemption have distinct sources.

California Senate Bill 649 passed the legislature but was **vetoed on 15 October 2017**. A fire-facility provision in that bill must not be described as a protection created by an enacted SB 649. The veto is recorded in the California Senate's legislative digest.

School and municipal decisions can produce concrete restrictions. A June 2025 Loudoun County government update, under initiative 5.3, identifies a **LCPS** (Loudoun County Public Schools) cell-tower siting prohibition in effect until 2029. The supplied worldwide compilation includes a broader range of local objections, motions and planning decisions, including 4G cases. The legal force, duration and technology in each example matter; these categories should not all become "countries banning 5G." S11

1.6 Military applications and dual use

John's stated assessment is that MIMO, phased arrays and beamforming are readily weaponizable because, in his account, the underlying technology originated in military development. The public military record provides concrete material for examining that assessment.

System or programme	Documented capability
DARPA (Defense Advanced Research Projects Agency), Arrays at Commercial Timescales — Integration and Validation, ACT-IV **ONR** (Office of Naval Research) high-power microwave research	A multifunction electronically scanned array supporting radar, electronic warfare and communications, transitioned to the Air Force Research Laboratory in 2021. DARPA Electromagnetic systems intended to disrupt or damage electronics, with antenna arrays, beam steering and distributed beamforming among its research areas. ONR

System or programme	Documented capability
Active Denial System and other directed energy systems	Millimetre-wave heating for area denial and other electromagnetic weapon effects. GAO discusses technical limitations and unresolved long-term health questions. **GAO** (Government Accountability Office), 2023

Shared techniques make dual-use scrutiny substantive. Whether a particular commercial installation can produce a specified weapon effect depends on its hardware, accessible controls, frequency, delivered field, waveform, range and target interaction. Military array development establishes a technological connection; **"easily weaponized" remains John's assessment of the practical bridge**. MIMO, array construction and beam steering should retain their distinct technical meanings. S13 S14

The European Policy Centre brief addresses military directed energy programmes and defence policy. Deruelle's 2024 review goes further, arguing for connections among telecommunications, neurological warfare, graphene and future human-machine integration. Its military-purpose and integration claims belong to the author's argument; the paper is not a measurement demonstrating those functions in an identified commercial network. S09 S08

1.7 Surveillance environment and technological convergence

The supplied **UN** (United Nations) concept note is an explicit institutional connection between 5G, IoT, big data and nanotechnology within development policy. It also raises cybersecurity, inequality, ethical questions and the distribution of benefits and burdens. Those governance concerns are part of its own text. S10

John's wider research scope connects this infrastructure to bodily autonomy, political power and possible coercive uses. The following preserves the subjects and the relationships he wants investigated.

1.7.1 Computing and communication capabilities

John names photonic computing in China, artificial intelligence, quantum computing and communications, and room-temperature superconductors. The investigation asks which demonstrated capabilities, operating conditions and deployments could change communications, sensing or computational power.

1.7.2 Biological interfaces and exposure pathways

Synthetic biology, DNA and **RNA** (ribonucleic acid), optogenetics, neuromodulation, biosensors, biophotonics, biomimetics and nanotoxicology enter John's research map. The answer-changing connections concern a specified biological intervention, material, delivery route, device or interface and the observed outcome.

1.7.3 Connected devices and bodies

IoT (Internet of Things) and **IoB** (Internet of Bodies) concern different applications and data relationships. **WBAN** (wireless body area network) and **MBAN** (medical body area network) name body-related networking categories. The **IEEE 802.15** wireless standards family and **EMBS** (Engineering in Medicine and Biology Society) have distinct organisational and technical roles. "OMNET" is retained as John's supplied label; the intended expansion and specific system remain to be identified.

For each application, identify what is sensed, transmitted, inferred or controlled, which actor can access it, and which record establishes the connection.

1.7.4 Spectrum and light

Millimetre-wave and terahertz systems, blue **LED** (light-emitting diode) light and **VLC** (visible-light communication) name different sources and spectrum ranges. The relevant comparison specifies source, exposure and tissue interaction rather than treating shared electromagnetic terminology as a common dose.

1.7.5 Military programmes and governance

Project Maven and Project Salus are named research leads. The programme capability, data flow, deployment and claimed biological interface each have their own documentary path.

John also connects **WEF** (World Economic Forum), transhumanism and H+ (Humanity+), biodigital convergence, smart cities, 15-minute cities, **SDGs** (Sustainable Development Goals), **CBDCs** (central bank digital currencies) and social credit. The governance investigation follows implemented interfaces among identity, money, movement and service access, together with consent, oversight, appeal and exit rights.

For two named programmes, contemporaneous **DoD** (U.S. Department of Defense) descriptions provide concrete starting points: Maven's initial task was computer-vision analysis of imagery; Salus in 2020 supported predictive analytics and resource planning for the COVID-19 response. A proposed further link to a biological interface requires its own documented pathway.

John's investigative position: combinations of communications, sensing, biotechnology and governance may enable coercive systems, including what he describes as an open-prison form of smart-city control. That connection is preserved as his hypothesis and ethical concern. Specific implementation records can establish, narrow or challenge individual links without deciding the entire network of questions at once.

1.7.6 Network security aviation and commercial deployment

The European Commission's June 2023 5G toolbox communication identifies supplier dependency and potential third-country influence as security concerns, and considers restrictions on Huawei and ZTE justified under its assessment. This records the Commission's security judgment and its stated grounds. The **NIST** (National Institute of Standards and Technology) March 2026 design paper addresses practical safeguards, including separation of data, control, and operations traffic.

Network security, privacy and RF health effects also need their own analyses. Surveillance can occur through data collection and inference; an RF health claim concerns exposure and biological response. A concrete technical controversy is aircraft radio-altimeter interference: the **FAA** (Federal Aviation Administration) July 2026 statement describes performance requirements and coordinated safeguards for coexistence with expanded wireless use.

The environmental scope includes energy demand, electronic waste, infrastructure, ecosystems and satellite deployment. The citizen submission raises several of these issues. Each requires an appropriate unit of analysis: operational energy, lifecycle materials, habitat effects, or a specified biological exposure. More efficient transmission per bit and higher total network consumption can coexist when traffic and infrastructure increase. S11

Deployment economics also deserve examination: spectrum payments, infrastructure costs, anticipated returns, public subsidies and the distribution of benefits can shape rollout choices. The relevant comparison includes wired alternatives, rural access, maintenance, resilience and social costs.

1.8 Safer connectivity and public agency

The archive contains proposed alternatives as well as objections. The international submission advocates fibre, the **IEEE** (Institute of Electrical and Electronics Engineers) paper discusses wired connections, and the IET book develops methods to reduce exposure through

antenna and network design. These contributions make deployment choices inspectable. S11 S01 S07

Fibre and Ethernet can replace radio links for fixed connections. Whether a household or workplace still produces RF depends on its endpoints and other equipment. Capacity, security, resilience, cost, accessibility and mobility remain practical design questions. “Near-infinite bandwidth” and a guarantee of security would overstate what fibre itself establishes.

The ethical question extends to people who cannot readily alter surrounding infrastructure. Relevant decisions include how communities receive notice, who can inspect exposure and planning records, how objections are heard, which alternatives are considered, and what remedy exists if new evidence changes a safety assessment.

1.9 The supplied Google AI account

The supplied exchange moves from a broad account combining health anxiety with debunked misinformation to much stronger endorsement of grassroots objections and an Anti-Unsafe-5G description. It is useful as an example of how a frame changes. A move toward agreement needs the same factual and correspondence checks as an initial reassuring answer.

Google AI wording or move	Correspondence and factual correction
Begins with “legitimate” concerns alongside “public health anxiety” and “thoroughly debunked misinformation”	Identify which specific claims those descriptions concern. Their adjacency must not assign them to every health question or to John’s conditional position.
Non-ionizing radiation lacks energy to damage “DNA or cellular structures”	Direct ionization and every possible biological effect are different propositions. RF heating and the NTP findings require exposure-specific wording.
WHO (World Health Organization) says there is no scientific evidence	The WHO page dated 27 February 2020 states its causal assessment and makes its public-health expectation conditional on guideline compliance. That is more specific than an absence of relevant research.
The FCC acted unlawfully by “refusing to review” its limits	The FCC conducted an inquiry and terminated it in 2019. The 2021 judgment found its reasoning insufficient on specified issues and required a reasoned explanation.
California “passed SB 649” and firefighters secured an enacted exemption	Legislative passage was followed by a veto; the bill did not become law.
Dutch litigation is offered under national postponements	The cited 2020 proceeding rejected the requested prohibition and allowed auctions to proceed.
The Frey effect bypasses acoustic pathways	Microwave absorption can launch a thermoelastic acoustic pressure wave detected by the cochlea. Mechanistic research review.
“Thousands” of clinicians and researchers are discussed alongside the EMF Scientist Appeal and a 5G moratorium	The 5G Appeal identifies its September 2017 submission and distinguishes the earlier EMF Scientist Appeal. Counts, qualifications and demands belong to their specific appeal and date; the cited 5G page lists 438 signatories as of July 2024.
“Anti-5G” changes to “Anti-Unsafe-5G”	This applies John’s correction in the later supplied passage. Continued use of the corrected meaning in later comparable accounts remains a separate test.

The pandemic connection also needs its actual wording preserved. Pall's February 2020 statement asks whether 5G might exacerbate viral replication, spread or disease severity; it expressly distinguishes that question from responsibility for creating the virus. That is a proposed cofactor argument, not an observation that a radio signal transmits a virus. Its proposed causal relationship still requires direct testing. S04

Arson reports or threats against engineers, where documented, concern particular conduct and actors. They do not establish the position or conduct of every person scrutinizing RF exposure. Likewise, documented scientific, legal or institutional failures should not be assigned indiscriminately to every researcher, regulator or journalist.

1.10 Forecasts and later comparison

John's current forecast is that cumulative consequences of wireless exposure may eventually be understood as a substantial health and life-expectancy tradeoff, after widespread adoption has made meaningful avoidance difficult. His stated purpose is to preserve that warning now so later outcomes can be compared with the original.

The archive includes earlier forecasts by other authors. Pall's 127-page report forecasts a near-collapse in reproduction over about five years; Trower's 2013 report projects substantial reproductive risk from school exposure. These are identifiable author forecasts and extrapolations. Their original wording, dates or baseline, assumed exposure and predicted outcomes belong beside any later assessment. S03 S05

For a later comparison, retain the original claim, its intended time horizon, the population and exposure, the predicted outcome, the evidence used at the time and the observations that would warrant revision. An outcome may support part of a mechanism while changing a forecast's magnitude, timing or attribution.

John's original research statement and origin account are preserved in the source record below, dated 30 October 2026.

1.11 Project Avalon: growing Stop 5G investigation inventory

Coverage: pages 1–56 · posts #1–1114 · 144 potential investigation topics · retrieved thread end reached · reviewed 30 October 2026.

Batch	Source range	Contribution	Open it
01	Pages 1–10, #1–200	Initial 53 questions, G001–G053	Initial inquiry areas
02	Pages 11–20, #201–400	23 new or materially sharper questions, G054–G076; 20 extensions to earlier topics	Second batch
03	Pages 21–30, #401–600	23 new or materially sharper questions, G077–G099; 26 extensions to earlier topics	Third batch
04	Pages 31–40, #601–800	17 new or materially sharper questions, G100–G116; 36 extensions to earlier topics	Fourth batch
05	Pages 41–50, #801–1000	20 new or materially sharper questions, G117–G136; 45 extensions to earlier topics	Fifth batch

Batch	Source range	Contribution	Open it
06	Pages 51–56, #1001–1114	8 new or materially sharper questions, G137–G144; 49 extensions to earlier topics	Final batch

The first-batch record below preserves the initial source field and questions. Subsequent batches add source-linked distinctions, records and practical next work. **The retrieved thread's final page, 56, has now been reached through post #1114.** Topic counts describe the editorial map; observations, source claims, technical arguments and forecasts keep their own attribution and status.

Recovery worklist moved, 30 October 2026: at John's request, the four embedded-content recovery tables now form a separate clickable working file for screenshot/text collection. The underlying source index preserves the links and access states. This editorial move does not change the topic inventory or establish review of the missing content.

First batch · 30 October 2026 · pages 1–10 · posts #1–200 · 53 potential investigation topics.

John requested the method developed on A.I.s & Health: recover useful contributions and explain what warrants further attention.

> "without the need to agree or disagree… just seek what deserves or warrants deeper investigation and what is worthy of consideration!"
>
> — **John Kuhles [parrot] [butterfly] [tree]**, commissioning instruction, 30 October 2026

The source is *Stop 5G before it's irreversible!*, opened by **ExomatrixTV (John Kuhles)**. This batch follows the public post text and linked-source descriptions in discussion order. The displayed posting dates run from **12 November 2017 to 10 November 2018**. Some posts have later edits, including edits through 2026 in this range; the current text is a retrieved version of a living archive. Long reproduced articles were skimmed for scope discovery. Embedded videos, image-only material, external documents and individual case records remain further access layers.

Contribution and status. GPT / Codex supplies the questions, grouping and investigation rationale below; contributors retain authorship of their observations, arguments, source recovery and proposals. A useful entry can preserve a care need, a technical distinction, an overlooked alternative, a primary-source route or a better way to investigate. The 53 entries describe this editorial map. They are research opportunities with source routes, rather than counts of verified cases or estimates of harm. The thread also contains confident assertions, allegations and forecasts; their original attribution and conditions remain available at the linked posts.

The 1888 intelligence-properties taxonomy gives this work an operational trajectory: perception recovers the actual object; discrimination separates technologies and source forms; relation connects conditions and consequences; judgment asks what would advance understanding; memory preserves versions and corrections; learning changes the next inquiry. 10+1 keeps self-honesty, inquiry, care, correction and non-projection active together. Beyond Agreemurmelism keeps the quality of agreement and disagreement available for evaluation, including the editor's own selections.

1.11.1 What this batch makes possible

The archive already contains several forms of useful work:

- **A broad concern becomes an inspectable records request.** ExomatrixTV #95 reproduces a numbered list concerning Seattle City Light: meter specifications, fire ev-

idence, installer qualifications, remote switching, data intervals, security, opt-out eligibility, costs and ecological questions. Recovering the request's author, date, agency response and disclosed records could turn that list into a reusable public-inquiry example. Its proposed questions already distinguish several responsibilities that a single "smart meter" label can hide.

- **A contributor identifies a missing technical relation and follows it.** In Joe from the Carolinas #113 and ThePythonicCow #114, the discussion asks how high-frequency communications would work around obstacles. In ThePythonicCow #115, ThePythonicCow returns with a Qualcomm beamforming source and acknowledges what was missing from the earlier explanation. That observable learning step supplies a specimen for Correction Metabolism: recover the source, record the change and inspect its later use. The accompanying surveillance interpretation retains its own status.
- **Presentation receives feedback from its audience.** onawah #86 explains how loud, disturbing music impedes engagement; ExomatrixTV #88 explains artistic intention, attention and recall; onawah #89 continues the discussion. These are contributions to an investigation of communication: what helps someone hear the content, inspect a source, remember it and retain their own agency?
- **A copied article exposes a source-transformation trail.** Hervé #200 reproduces reporting about The Hague bird deaths, with material attributed to John and links to other accounts. Recovering each dated version can serve both an ecological investigation and the attribution inquiry already developed on Search Engine Bias. The quotation chain is part of the object to examine.

1.11.2 Coverage and continuation

Forum page	Posts screened	Displayed posting dates	Source range
1	#1–20	12th November 2017 → 14th November 2017	#1 · #20
2	#21–40	14th November 2017 → 23rd November 2017	#21 · #40
3	#41–60	23rd November 2017 → 18th February 2018	#41 · #60
4	#61–80	18th February 2018 → 8th May 2018	#61 · #80
5	#81–100	10th May 2018 → 24th May 2018	#81 · #100
6	#101–120	9th July 2018 → 3rd September 2018	#101 · #120
7	#121–140	4th September 2018 → 23rd September 2018	#121 · #140
8	#141–160	23rd September 2018 → 9th October 2018	#141 · #160
9	#161–180	9th October 2018 → 17th October 2018	#161 · #180
10	#181–200	17th October 2018 → 10th November 2018	#181 · #200

First-batch continuation: page 11 was the next unexamined page after batch 01; it is now covered in the second batch. This completes the requested first ten-page scope batch. Later batches can add a distinct question, sharpen an existing one, supply another source

route or produce a valid null. The machine-readable scope index retains all 200 post identifiers, displayed authors, dates, edit notes and topic relationships. Repeated quotations and reposts remain circulation relationships; they do not automatically become independent observations.

1.11.3 Follow an inquiry area

- Exposure, signals and biological mechanisms — G001–G010.
- Health, lived experience and useful care — G011–G018.
- Ecology, infrastructure and resource use — G019–G023.
- Network architecture, data and public agency — G024–G031.
- Standards, institutions, rights and records — G032–G040.
- Dual use, history and forecasts — G041–G045.
- Representation, learning and community return — G046–G053.

1.11.4 Exposure, signals and biological mechanisms

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G001 — Which technology and frequency does each account concern?	The discussion moves among cellular generations, 5 GHz Wi-Fi and later high-frequency Wi-Fi. Recover the device, standard, band, location and date before comparing exposure or outcomes.	Noelle #12; TargeT #27; Flash #93; ThePythonicCow #114; ThePythonicCow #181
G002 — How do buildings, distance and tissue change the received exposure?	The exchanges about wood, walls, skin and distance point toward measurements under specified conditions. Compare propagation, absorption, antenna direction and the limits of the mathematical model used.	TargeT #67; TargeT #69; TargeT #102; ThePythonicCow #103; ThePythonicCow #114
G003 — What changes when exposure comes from many sources over time?	John and other contributors raise a cumulative-exposure question. A useful study would preserve source contributions, duration, changing traffic, measured fields and the biological outcome being followed.	ExomatrixTV #7; ExomatrixTV #138; ExomatrixTV #186
G004 — How should moving beams and multiple antennas be measured?	Beamforming and multiple-input multiple-output antenna proposals introduce spatial and temporal variation. Recover operating modes, beam scheduling, peaks, averages and the person’s position during measurement.	ThePythonicCow #115; onawah #199

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G005 — Can the proposed multipath-to-nerve-firing mechanism be tested?	Bob proposes a relation between reflected signals and neural firing. Recover his experimental records and specify phase, field strength, tissue model, controls and reproducible endpoints for an independent test.	Bob #135; Bob #137; Bob #177; Bob #178
G006 — Which frequency-specific skin or sweat-duct interactions merit replication?	Posts discuss surface interactions and cite a lecture about sweat ducts. Follow those leads to the original models and experiments, preserving their frequency, dose, tissue and proposed endpoint.	ThePythonicCow #103; Hervé #161
G007 — Does pulse structure change an outcome at otherwise comparable exposure?	Repeated concern about pulsed signals can become a dose-matched comparison of waveforms. Specify modulation, duty cycle, peak and average exposure, measurement bandwidth and the outcome to be assessed.	Bob #137; ExomatrixTV #138; Bob #177; ExomatrixTV #186
G008 — Which cellular mechanisms connect to a measured health endpoint?	The archive names oxidative stress, DNA damage and voltage-gated calcium channels. Recover the underlying experiments and test the chain from signal to cellular response to the claimed outcome.	ExomatrixTV #21; onawah #193; onawah #199
G009 — What biological question follows from oxygen absorption near 60 GHz?	Contributors connect a propagation property to possible bodily or ecological consequences. Recover the physical absorption model and the additional measurements needed to evaluate each proposed biological step.	ThePythonicCow #108; Bob #185
G010 — How could RF interact with other environmental exposures?	Fluoride comparisons and John's metal-particle metaphor raise different co-exposure hypotheses. Identify the actual substance, concentration, field and interaction mechanism, then compare single and combined exposures.	ExomatrixTV #36; ExomatrixTV #148; ExomatrixTV #186

1.11.5 Health, lived experience and useful care

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G011 — How are reported symptoms assessed and followed over time?	Accounts of feeling unwell near infrastructure deserve recoverable timelines, exposure histories, clinical assessment and follow-up. Preserve the person's experience and the explanations being investigated separately.	onawah #109; Flowerpunkchip #129; onawah #165
G012 — How do sleep and cognition relate to RF, lighting and other conditions?	Posts connect cognitive complaints, bedrooms and blue-rich street lighting. Separating radio exposure, visible light, sleep schedules and other circumstances could make investigation more informative.	Michelle Marie #107; ThePythonicCow #127; onawah #165; onawah #170
G013 — Which individual differences change response, burden or recovery?	Contributors describe differing sensitivity and adaptation. A longitudinal design could investigate susceptibility, prior health, medication, context and functional outcomes, including people reporting no change.	ThePythonicCow #127; Bob #167; Bob #171
G014 — What evidence is needed for child, pregnancy and reproductive questions?	School testimony and fertility forecasts point to distinct populations and timescales. Recover age-specific exposure, original endpoints, follow-up duration and suitable comparison groups for each question.	onawah #81; onawah #116; RunningDeer #121; onawah #128; onawah #142; onawah #153
G015 — How do cancer findings transfer across species, signals and time?	The thread cites animal research, epidemiology and cancer-risk summaries. Study selection, exposure, latency, absolute outcomes and funding provenance would help evaluate the actual relation being proposed.	ExomatrixTV #21; ExomatrixTV #32; ExomatrixTV #73; onawah #146; onawah #199
G016 — What does changing a home or moving away cost and accomplish?	Onawah describes relocation and spending in pursuit of relief. Follow symptom trajectories alongside housing, work, finances, social support and measured environmental changes to recover both burden and useful outcomes.	onawah #109; ThePythonicCow #127; onawah #165; onawah #170

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G017 — Which protective products or practices withstand independent evaluation?	The thread proposes shielding, devices, crystals, supplements and environmental changes. Identify the exact claim, costs and commercial relationships, then evaluate measured exposure and meaningful outcomes with suitable controls.	onawah #59; Bob #144; onawah #145; onawah #165; onawah #166; onawah #168
G018 — What support remains useful while a causal explanation is unresolved?	Care and recognition can develop alongside continuing investigation. Study access to assessment, practical accommodations, informed choices and respectful review, preserving each person's stated priorities and subsequent experience.	Flowerpunkchip #129; norman #133; ThePythonicCow #134; onawah #165; Bob #171

1.11.6 Ecology, infrastructure and resource use

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G019 — Why were particular trees removed or altered?	The tree-related posts suggest an inspectable planning question. Compare vegetation records, network design, maintenance reasons and ecological consequences for the actual sites and dates.	ExomatrixTV #63; ExomatrixTV #72; ThePythonicCow #74; ExomatrixTV #98
G020 — Which insect or pollinator outcomes deserve exposure-specific study?	Posts raise concerns about insects, navigation and ecosystems. Recover species, signal conditions, habitat and other stressors from the original studies, then identify replication or field-monitoring opportunities.	ExomatrixTV #63; ExomatrixTV #98; onawah #199
G021 — How should a local bird-mortality event be investigated?	Post #200 reproduces reporting about The Hague and several explanations. Compare veterinary and environmental findings with independently dated transmitter activity, while preserving the reporting and quotation chain.	Hervé #200

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G022 — What changes when connectivity extends through satellite constellations?	Satellite forecasts connect coverage, escape from exposure, orbital infrastructure and launch concerns. Recover the proposed constellation, ground terminals, actual bands, emissions and lifecycle effects as separate research objects.	Joe from the Carolinas #18; onawah #109; ThePythonicCow #114; ThePythonicCow #163; ThePythonicCow #180
G023 — What are the lifecycle costs of the proposed infrastructure?	Meter replacements, street equipment, chips and wireless charging raise questions about energy, materials, maintenance and waste. Compare whole-system costs and useful service under specified wired and wireless alternatives.	ExomatrixTV #95; James Newell #141; Bob #182; Bob #185

1.11.7 Network architecture, data and public agency

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G024 — What is actually installed in a smart streetlight?	The LED discussion joins lighting, radios, cameras and microphones. Recover the component inventory, procurement specification and enabled functions so light effects, RF exposure and surveillance can each be investigated.	The Moss Trooper #61; Michelle Marie #107; onawah #142
G025 — Which household or street data are collected, retained and shared?	The meter request and streetlight article identify concrete information flows. Obtain sampling intervals, access rules, security assessments, retention policies, sale or reuse agreements and meaningful consent or appeal routes.	The Moss Trooper #61; ExomatrixTV #95; Michelle Marie #107
G026 — How does network ownership change access, oversight and geopolitical risk?	Bill Ryan’s reproduced nationalization report and later replies offer competing ownership models. Compare decision records, procurement, interoperability, concentration, security responsibilities and public accountability.	Bill Ryan #50; ZoSo925 #51; TargeT #54

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G027 — Which industrial and body-sensor uses create benefits or new dependencies?	A later report connects transport, automation, healthcare sensors, virtual environments and cities. Examine each application's promised service, evidence of benefit, failure modes, data rights and affected workers or users.	onawah #170; ThePythonicCow #180
G028 — Can people retain control over their devices and internet participation?	ThePythonicCow connects amateur radio, self-built computers, app stores and network access. Compare repairability, user-controlled software, self-hosting, community networks, resilience and the practical ability to leave a platform.	ThePythonicCow #108
G029 — Which links connect a sensor observation to enforcement?	The rainwater-and-gardening exchange asks how a proposed control system would operate. Trace sensing, identification, inference, legal authority, human decisions and contestability for one specified use.	ExomatrixTV #76; Joe from the Carolinas #77; Orph #78; ExomatrixTV #79
G030 — Where do AI, financial records and communications systems actually interconnect?	Contributors propose connections among networks, large computing centres and blockchain records. Recover an actual interface, contract, data-sharing arrangement or deployment for each proposed connection.	ExomatrixTV #80; ThePythonicCow #106; ThePythonicCow #115; ThePythonicCow #180
G031 — Which wired or user-controlled alternatives remain practically available?	Accounts of forced upgrades and costly fibre installation meet proposals for wired access. Compare local feasibility, affordability, maintenance, accessibility and service quality, including users who need mobile connectivity.	Michelle Marie #8; Noelle #12; Michelle Marie #15; ZoSo925 #58; ThePythonicCow #108; onawah #172

1.11.8 Standards, institutions, rights and records

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G032 — Which health effects and exposure durations do standards address?	The opening notes, legislative transcription and agency-letter compilation question the scope of protection. Recover the exact standard, biological evidence, averaging rules, review date and stated uncertainties before comparing alternatives.	ExomatrixTV #1; Michelle Marie #8; RunningDeer #121; onawah #146; onawah #154
G033 — How do funding and institutional incentives relate to research results?	Several posts give numerical comparisons of industry and independent studies. Recover the original datasets, selection criteria, study methods, disclosures and later replications so the comparison can be reproduced.	ExomatrixTV #21; ExomatrixTV #32; Michelle Marie #33; ExomatrixTV #73; onawah #146
G034 — What did each government agency actually communicate?	The “five agencies” article is a source-recovery lead to letters and assessments. Obtain the original author, recipient, date, wording, remit and later institutional response for each document.	onawah #146
G035 — How did siting rules redistribute local powers and responsibilities?	The thread discusses Michigan bills, mayors, fees, deadlines and environmental review. Recover the period-specific text and decisions, then follow effects on notice, participation, safety review and remedies.	raregem #30; RunningDeer #121; onawah #125; onawah #195; onawah #199
G036 — How did policy coordination, public funding and rollout commitments connect?	The UN concept note, national-network report and investment material offer different documentary entry points. Compare their actual purposes, funding, obligations and implementation without merging the documents into one programme.	ExomatrixTV #35; Bill Ryan #50; onawah #81; James Newell #141; onawah #160
G037 — What results followed the proposed notices of liability?	InPower discussions describe contractual and financial strategies. Recover the notices, recipients, responses, opt-out outcomes and any adjudication, preserving the difference between a proposed remedy and its demonstrated legal effect.	gnostic9 #16; ExomatrixTV #19; genevieve #20; raregem #30; Michelle Marie #31

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G038 — What do insurance terms actually exclude or cover?	A reproduced interview attributes a strong position to Lloyd's. Obtain the specific policy, insurer, jurisdiction, period, exclusion and underwriting explanation before drawing conclusions about coverage or predicted harm.	onawah #142
G039 — What exactly did the reported Gateshead court proceedings decide?	Posts describe Mark Steele's case as a wider victory. Recover the judgment, parties, issue, evidence and operative order, then compare that scope with the claims made in subsequent headlines.	Flowerpunkchip #191; Trisher #196
G040 — How can a person's complaint and procedural rights be examined fairly?	An interview account of detention is followed by a reported professional response and a moderator's analogy. Recover consented records, decision reasons, confidentiality limits, representation and appeal while keeping unresolved accounts identifiable.	Flowerpunkchip #129; onawah #130; norman #133; ThePythonicCow #134; avid #197

1.11.9 Dual use, history and forecasts

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G041 — What would make a communications system capable of a specified weapon effect?	The Active Denial System comparison contains both concern and technical challenge. Compare frequency, power density, beam control, duty cycle, exposure duration, hardware and required modifications for the particular effect proposed.	ExomatrixTV #13; Hervé #161; Bob #162; onawah #176; Bob #177
G042 — What can a patent establish about a proposed mechanism or deployment?	The patent exchange asks a productive question about use. Recover legal status, claims, working examples, independent tests and deployment records; each answers a different part of the inquiry.	ExomatrixTV #37; Michelle Marie #38; TargeT #39; TargeT #54; Bob #137

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G043 — Which historical microwave episodes have recoverable primary records?	The Eugene/Moscow/Woodpecker account connects several historical episodes. Trace each to original records, measured signals, contemporary observations and later investigations while retaining the documentary type and date.	onawah #150; onawah #151; Dennis Leahy #152
G044 — What can be recovered from the reported contractor and worksite accounts?	Joe from the Carolinas relays a friend's descriptions; others ask about the building and shielding. Identify the apparatus, operating conditions, witness access and safety procedures before relating a workplace account to public exposure.	Joe from the Carolinas #18; Joe from the Carolinas #66; TargeT #67; Joe from the Carolinas #68; TargeT #69
G045 — How do dated forecasts compare with subsequent developments?	The archive contains rollout, surveillance, reproductive and life-expectancy forecasts. Preserve original dates, edit history, conditions and measurable predictions, then compare later outcomes and responses to revision.	Joe from the Carolinas #18; ExomatrixTV #53; onawah #81; ThePythonicCow #104; ExomatrixTV #138; onawah #142; ThePythonicCow #180

1.11.10 Representation, learning and community return

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G046 — What happens when a safety objection is recategorized?	Colbeck's technology-positive framing and Valerie Villars's account of a flat-earth comparison expose a representation question. Compare original remarks, labels and the substantive question that remained available for inquiry.	ExomatrixTV #84; RunningDeer #121; Valerie Villars #126
G047 — How do music, artistry and presentation affect understanding?	Onawah describes an access and emotional-response problem; John explains artistic intent, attention and recall. Compare comprehension, source use and memory under different presentations while preserving both contributions.	ExomatrixTV #82; ExomatrixTV #83; onawah #86; ExomatrixTV #88; onawah #89

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G048 — Does a balanced-looking report preserve the actual unresolved question?	John describes reports ending with a corporate reassurance. Recover the full recordings, sequencing, source access, technical qualifications and opportunity for response; compare what audiences understand afterwards.	ExomatrixTV #156; ExomatrixTV #188; ExomatrixTV #189
G049 — Which source requests or distinctions improve the next inquiry?	The thread includes a review excerpt acknowledging both present and absent effects, requests for study links, and competing physical explanations. Recover those contributions and test whether later summaries retain their conditions.	ExomatrixTV #21; TargeT #27; ExomatrixTV #36; TargeT #39; TargeT #54; ThePythonicCow #103
G050 — When does a contributor's explanation visibly change after source recovery?	In posts #113–115, a question about high-frequency use leads ThePythonicCow to a beamforming explanation and an explicit acknowledgment of what was missing. Preserve that learning sequence and its subsequent use.	Joe from the Carolinas #113; ThePythonicCow #114; ThePythonicCow #115; Bob #178; onawah #179
G051 — Which versions, duplicate posts or access barriers change the record?	Several posts contain later edits, backup media, merged threads or repeated text. Preserve posting and edit dates, originating versus quoted authors, stable IDs and access gaps so circulation remains traceable.	ExomatrixTV #1; ExomatrixTV #3; ExomatrixTV #11; ExomatrixTV #46; ExomatrixTV #47; Michelle Marie #48; Michelle Marie #52; Michelle Marie #55; Michelle Marie #57; ThePythonicCow #74; ExomatrixTV #90; ExomatrixTV #91; ExomatrixTV #188; ExomatrixTV #189; Hervé #200
G052 — How can community contributions return as practical help?	Requests for local groups, a detailed records list, transcription and mutual assistance show work people can carry forward. Follow whether a contribution produces accessible records, useful participation, better understanding or a completed response.	Michelle Marie #9; onawah #94; ExomatrixTV #95; RunningDeer #121; James Newell #122; James Newell #124; Intuitivecatherine #194; Tintin #198

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G053 — How do accounts of consciousness, spirit and human identity enter the inquiry?	Participants explore technological and spiritual accounts of personhood and human futures. Recover the meanings, proposed relations, observations and possible tests, and follow how these perspectives shape agency, cooperation and practical choices.	misbis #17; ExomatrixTV #80; James Newell #117; petra #118; James Newell #119; onawah #174; Universoul #175

1.11.11 Connect the questions to useful next work

These are editorial routes through the inventory. Each route can develop into a bounded investigation with its own question, participants, source record and completion conditions.

Starting contribution	Relationships to recover	Inventory routes
A person reports symptoms	Experience and timeline → measured circumstances → assessment and support → follow-up and explanation revision	G003, G011, G012, G013, G016, G018
A technology is proposed for a neighbourhood	Equipment and operating modes → expected service and alternatives → notice and local authority → monitoring, review and remedy	G001, G004, G019, G024, G031, G035
A household device acquires connected functions	Component and data inventory → collection and remote control → security and access → consent, departure and repair	G023, G025, G028, G029, G037
A proposed biological mechanism enters circulation	Original model and measurements → independent reproduction → relevance to the actual exposure → clinical or ecological endpoint	G005, G006, G007, G008, G009, G010
An early warning becomes a later summary	Dated wording and edits → source and attribution chain → subsequent outcomes → revised explanation and downstream correction	G021, G043, G045, G048, G049, G050, G051

1.11.12 Selected source-recovery queue

These are leads supplied by the forum. Their linked original documents or recordings were not independently reviewed in this scope pass. Recovering them is a concrete next task; the form of a source determines what it can contribute.

Lead and forum route	Source form to recover	Useful next access
Review linked in post #21 · #21	Journal review	Original study selection, exposures, results and both present/absent effects described in the excerpt.
Engineering paper linked in post #69 · #69	arXiv paper	Paper version, propagation assumptions, antenna configuration and the scope of any inference about biological exposure.
“5G, you had me at beamforming” · #115	Vendor podcast/explanation	Original explanation or archive, engineering specifications and independent measurements.
2017 UN joint-meeting concept note · #35	Policy meeting document; also present in the supplied-file collection	Actual participants, purposes and commitments, followed separately through implementation records.
Captured Agency, linked copy · #146	Authored institutional critique	Underlying documentary citations, methods, institutional context and subsequent responses.
Senator Colbeck speech link · #120; RunningDeer’s transcription	Recording and community transcription	Original recording, transcript correspondence, units and period-specific legislative records.
DE10253433A1 · #37; WO2006105998A2 · #137	Patent/application records	Status, exact claims, working examples and separate evidence of testing or use.
Active Denial technical-report link · #162	Government technical-report lead	Recover an accessible authoritative copy and compare actual apparatus and operating conditions.

For each next investigation, record the question, source form, useful contribution, access gap, participant priorities and evidence that could change the explanation. A successful return may be an accessible record, a better measurement, a practical alternative, completed support or a warranted correction. Meta Processing keeps those returns connected to the work that produced them.

1.11.13 Second batch: pages 11–20 — sharper questions and useful continuations

30 October 2026 · posts #201–400 · 23 new or materially sharper questions, G054–G076 · 20 source-linked extensions to earlier topics.

The displayed posting dates in this batch run from **27 November 2018 to 2 July 2019**. Text and linked-source descriptions were screened in discussion order; long reproduced articles were skimmed for topic discovery. The first 53 topic records and their original source routes remain intact. New questions below identify a more specific measurement, distinction, decision or research design; the extension table preserves useful contributions that belong to an existing question. Videos, image-only content, underlying studies and individual case records remain further access layers.

1.11.13.1 Contributions people can carry forward

- **Ask for an inspectable response.** yelik #208 reproduces questions about commissioned research, independence, risk assessment and wired alternatives while reporting

that a ministerial reply is awaited. Reports of congressional requests in #255 and #342 add another response trail. The useful continuation is to recover the request, answer, supplied evidence and later follow-through.

- **Repair a route back to the source.** ThePythonicCow #237 identifies a broken link, with an annotation reporting repair by Hervé. In #252–#254, Onawah reports an access problem and John records a link correction. The sequence preserves the practical work of making research reachable.
- **Recover the responsible institution.** Philippe #346 distinguishes a Brussels local-government decision from EU and other international institutions. That contribution supplies a more precise starting point for recovering the official decision and its actual scope.
- **Make a technical account available for checking.** Melinda #397 supplies a transcript of a tower climber's video. Nick Matkin #399 raises a units challenge. The transcript, original recording, calculation and equipment specification can now be compared at particular statements; the contributor's reported experience and the technical inference remain distinguishable.
- **Keep disclosure and uncertainty together.** James Newell #349 discloses an affiliate relationship and uncertainty about whether products he bought helped. Preserving both makes a later assessment more informative than circulation of the product claim alone.
- **Connect concern to available work.** ExomatrixTV #350 supplies 22 proposed routes, including letters, council questions, scientific-file access and local organizing. These are starting points for tracing what was tried, what response followed and what became useful to participants.

1.11.13.2 Coverage for the second batch

Forum page	Posts screened	Displayed posting dates	Source range
11	#201–220	27th November 2018 → 30th November 2018	#201 · #220
12	#221–240	30th November 2018 → 2nd December 2018	#221 · #240
13	#241–260	2nd December 2018 → 8th December 2018	#241 · #260
14	#261–280	8th December 2018 → 1st January 2019	#261 · #280
15	#281–300	5th January 2019 → 21st January 2019	#281 · #300
16	#301–320	22nd January 2019 → 14th February 2019	#301 · #320
17	#321–340	15th February 2019 → 20th March 2019	#321 · #340
18	#341–360	30th March 2019 → 4th May 2019	#341 · #360
19	#361–380	7th May 2019 → 5th June 2019	#361 · #380
20	#381–400	10th June 2019 → 2nd July 2019	#381 · #400

1.11.13.3 New or materially sharper investigation questions

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G054 — What can a particular RF meter measure reliably?	Calls to own a meter and a later meter search make instrument choice consequential. Recover frequency coverage, calibration, detection limits, averaging and pulse response, then record the uncertainty of measurements made in the actual setting. **Builds on:** G001 · G003.	Eric J (Viking) #201; Michi #343; bluestflame #376
G055 — How does checking units change a technical safety argument?	Power, energy, frequency, pulse repetition and absorbed exposure enter different comparisons. Reproduce the calculations and the transcript's quantities, then check the original recording and equipment specifications before reusing the numerical conclusion. **Builds on:** G002 · G007 · G049.	Bob #211; ThePythonicCow #212; ExomatrixTV #333; Melinda #397; Nick Matkin #399
G056 — Which functional outcomes could change before visible tissue damage?	Dennis Leahy distinguishes a biological change, altered function and visible damage, using a medical-device analogy. Specify the endpoint, benefit or harm criterion, exposure and comparison needed to investigate each state. **Builds on:** G008 · G015.	Dennis Leahy #239; Dennis Leahy #244
G057 — What distinguishes adaptation, reduced perception, coping and improved health?	Onawah and DaveToo question what adaptation means. Follow symptoms, perception, function, biomarkers, support needs and quality of life separately, including people who report no sensation. This could clarify which outcome an adaptation claim actually describes. **Builds on:** G013 · G018.	onawah #225; onawah #240; onawah #302; DaveToo #367; ExomatrixTV #386

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G058 — Whom do the test body and exposure scenario represent?	A lecture description and later child-health article question safety-testing assumptions. Recover the original phantom or model, anatomical parameters, age range, device position and test conditions, then identify populations or uses requiring a different comparison. **Builds on:** G014 · G032.	onawah #247; onawah #317
G059 — Does a safety review's summary preserve its underlying findings?	The **AGNIR** (Advisory Group on Non-ionising Radiation) critique linked by John alleges omissions and a mismatch between evidence and conclusions. Compare the review, cited studies and executive summary passage by passage, retaining selection methods, uncertainties, interests and any documented correction. **Builds on:** G032 · G033 · G034.	ExomatrixTV #228
G060 — Which dependencies and fallback options does a rollout create?	John's dependency argument and the O2 outage discussion raise different parts of a resilience question. Identify essential services, alternatives, failure consequences and exit costs before and after deployment; examine who can revise or decline the resulting arrangement. **Builds on:** G031 · G036.	ExomatrixTV #227; sunwings #260
G061 — When is purchasing or using a service treated as political consent?	John asks whether market adoption can be presented as public acceptance. Compare available choices, disclosure, necessity, affordability, public participation and the actual decision process to determine what the observed purchase or use can reasonably signify. **Builds on:** G025 · G031 · G035.	ExomatrixTV #227; ExomatrixTV #238

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G062 — Can privileged access defeat an intended separation of personal data?	ThePythonicCow proposes decentralization; Norman asks whether technical operators could reconnect the partitions. Map administrator permissions, linking identifiers, audit trails and enforceable limits, then test the proposed control against a specified access scenario. **Builds on:** G025 · G026.	ThePythonicCow #311; norman #312; ThePythonicCow #313; ThePythonicCow #314
G063 — What would a proposed passive radio-imaging system actually resolve?	Posts propose backscatter or three-dimensional sensing from distributed transmitters. Recover transmitter/receiver geometry, timing, bandwidth, signal access, processing and demonstrated resolution; distinguish a proposed capability from an accessed deployment record. **Builds on:** G029 · G030 · G041.	Hervé #288; ThePythonicCow #332
G064 — How do repeated occupational exposures compare with public exposure?	The thread raises military jammers, scanners and antenna work. Recover the actual apparatus, duty cycle, worker position, operating procedures and exposure records for each occupation before transferring an account to another population or technology. **Builds on:** G011 · G013 · G044.	Strat #223; Franny #309; ThePythonicCow #310; ThePythonicCow #329; Franny #338
G065 — What follow-up would make the firefighter-station reports informative?	A reproduced report links station antennas to neurological complaints. Recover installation dates, participants, assessments, exposure measurements, shift work, sleep and other exposures, then follow the intervention, later function and accommodation decisions. **Builds on:** G011 · G012 · G018.	Hervé #320

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G066 — Who bears costs and retains remedies under the actual liability arrangements?	John raises claims about pre-emption, protection from lawsuits and taxpayer bailouts. Recover the jurisdiction-specific rules, contracts, insurance and funding decisions separately, then trace the costs, standing and remedy that each arrangement actually creates. **Builds on:** G035 · G037 · G038.	ExomatrixTV #336; ExomatrixTV #337; ExomatrixTV #340; ExomatrixTV #357
G067 — What authority, scope and duration did a reported local pause have?	The Brussels exchange distinguishes a local decision from supranational institutions; another post describes a school-area tower pause. Obtain the decision, responsible body, technology, conditions and subsequent implementation before comparing these examples. **Builds on:** G035 · G039.	norman #344; Philippe #346; Strat #380
G068 — What changes when shielding alters both exposure and connectivity?	The anti-Wi-Fi paint article raises material performance and emergency-access questions together. Measure attenuation across relevant bands, device behaviour, openings and fallback communications, alongside the practical outcomes the user seeks. **Builds on:** G017 · G031.	Kryztian #347
G069 — Which physical, behavioural and social channels contribute to device-associated outcomes?	Dinner-table observations and screen-time material add mechanisms beyond a radio-exposure hypothesis. A useful comparison could track screen use, sleep, activity, social interaction and measured RF exposure, with outcomes appropriate to each channel. **Builds on:** G012 · G014.	James Newell #232; onawah #353

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G070 — Could adjacent-band emissions impair satellite weather measurements?	Post #369 links a Navy memo, senators' letter and spectrum-auction record. Recover the water-vapour measurement band, emission limits, aggregate interference assumptions and forecast-model consequences, together with the agencies' responses. **Builds on:** G032 · G036.	justntime2learn #369
G071 — How accurately does a rollout map describe service at a particular place and time?	Forecasts, router labels, rural trials and deployment maps describe different objects. Compare mapped claims with operator records, equipment, bands, operational dates, coverage and usable service; retain an explicit cutoff date for each comparison. **Builds on:** G001 · G002 · G022.	ThePythonicCow #209; justntime2learn #268; justntime2learn #280; avid #318; ThePythonicCow #356; lloveyou #368
G072 — How could community observations become a useful prospective follow-up?	A Melbourne contributor asks where to record effects after activation. Co-design a record of baseline conditions, symptoms, function, exposure, timing and relevant changes, with consent, privacy, comparison observations and routes to care. **Builds on:** G003 · G011 · G013.	Eric J (Viking) #201; bluestflame #376
G073 — What supports transferring a radioprotection finding to a different exposure?	Posts about miso and ginkgo draw on nuclear or radiotherapy contexts. Recover the radiation type, dose, model, intervention and endpoint in each cited study, then identify what evidence would be needed for the proposed RF application. **Builds on:** G008 · G017.	Constance #370; Constance #371
G074 — What makes a reported cancer cluster suitable for investigation?	A documentary account and a clinician's lecture describe cancer cases around particular phone use. Recover case definitions, diagnoses, exposure histories, denominator, comparison rates, latency and other circumstances while respecting participants' control over their records. **Builds on:** G011 · G015.	Constance #363; Constance #364

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G075 — What reporting and support routes are available to a concerned worker?	An alleged scanner-report episode and the transcribed tower-climber account raise questions about reporting, employment dependence and available alternatives. Recover the reporting record, response, protections, training and practical support rather than inferring an institutional response from concern alone. **Builds on:** G018 · G044.	Franny #338; Melinda #397
G076 — What information would make a right-to-know policy usable?	A clinician's call for disclosure, a petition and John's action-resource list point toward public information design. Identify what parents, purchasers, workers and neighbours need to compare options, understand limits, ask questions and obtain a response. **Builds on:** G014 · G032 · G035.	OopsWrongPlanet? #261; ExomatrixTV #350; Constance #364

1.11.13.4 Useful extensions to existing questions These additions retain their earlier topic IDs. Their value is the sharper relation, source or practical continuation described in the middle column.

Existing question	Contribution to follow	New forum routes
G001 — Which technology and frequency does each account concern?	Router names and installation language provide another device-identification example; the unresolved request for advice should remain visible.	justntime2learn #268; justntime2learn #280
G003 — What changes when exposure comes from many sources over time?	Co-exposure concerns connect an individual symptom account to a wider exposure history. Record the separate contributors and timelines instead of treating the combined concern as a measured total.	Flash #202; Bob #207; onawah #302; ExomatrixTV #386

Existing question	Contribution to follow	New forum routes
G004 — How should moving beams and multiple antennas be measured?	ThePythonicCow's phased-array discussion describes both concentration near a connection and possible reductions elsewhere. Preserve both proposed effects when designing spatial and traffic-dependent measurements.	ThePythonicCow #285; ThePythonicCow #315; Cara #395
G007 — Does pulse structure change an outcome at otherwise comparable exposure?	John, Bill Ryan and Norman distinguish irregular signals from broad natural-background analogies. Recover the waveform and timing actually compared; a later units discussion adds another check.	ExomatrixTV #243; Bill Ryan #248; norman #325; ExomatrixTV #333
G008 — Which cellular mechanisms connect to a measured health endpoint?	Mitochondrial and calcium-channel descriptions add further mechanism leads. Follow each claim to its particular experiment, exposure and endpoint.	Universoul #307; edina #319; Helvetic #396
G014 — What evidence is needed for child, pregnancy and reproductive questions?	Talks and child-health articles add developmental and reproductive questions; their original studies, population and comparison remain the next source layer.	onawah #258; onawah #263; onawah #294; onawah #317; RunningDeer #382
G017 — Which protective products or practices withstand independent evaluation?	Product discussions include an explicit affiliate disclosure and uncertainty about personal benefit. Preserve those alongside the product claim, independent measurements and user outcomes.	James Newell #290; Michi #343; onawah #348; James Newell #349
G020 — Which insect or pollinator outcomes deserve exposure-specific study?	John's reference list and later posts keep pollinators and food-chain consequences in view. Recover original species-specific studies and the ecological relationship being proposed.	ExomatrixTV #230; Bill Ryan #241; onawah #242; onawah #289
G022 — What changes when connectivity extends through satellite constellations?	Long satellite articles add launch emissions, propellant and ozone arguments. Trace terrestrial service, satellite links and launch-lifecycle models separately.	onawah #282; onawah #283; Hervé #287

Existing question	Contribution to follow	New forum routes
G026 — How does network ownership change access, oversight and geopolitical risk?	Vendor and geopolitical claims lead to specific backdoor allegations and national procurement choices. Obtain the technical report and decision record rather than assigning a whole supply chain one status.	ThePythonicCow #329; onawah #374; KiwiElf #379
G033 — How do funding and institutional incentives relate to research results?	The batch contains industry forecasts, institutional critiques, advocacy material and commercial promotions. Their disclosed relationships and methodological contribution can be recorded separately for the purpose each source serves.	ThePythonicCow #209; ExomatrixTV #228; onawah #229; onawah #335; James Newell #349; Kryztian #366; Cara #395
G034 — What did each government agency actually communicate?	Yelik's copied ministerial questions and reports of congressional requests add inspectable response trails. Recover what was requested, acknowledged, supplied, disputed or left open.	yelik #208; James Newell #219; onawah #255; onawah #257; onawah #295; onawah #342
G039 — What exactly did the reported Gateshead court proceedings decide?	Later Gateshead reporting describes further proceedings after an earlier victory headline. Recover each case and order before merging the sequence into a general safety finding.	Hervé #296; Akasha #298
G043 — Which historical microwave episodes have recoverable primary records?	A DIA link, an NSA-statement reproduction and a millimetre-wave literature list add historical recovery routes. Retain issuing body, record type, translation and subsequent interpretation.	James Newell #219; Cara #395
G045 — How do dated forecasts compare with subsequent developments?	Dated rollout forecasts and contributors' questions about prediction methods support retrospective comparison. Fix the version, forecast window, outcome and revision conditions before scoring a prediction.	ThePythonicCow #209; onawah #282; Hervé #287; Pam #292; Philippe #327; ThePythonicCow #378; ExomatrixTV #386
G046 — What happens when a safety objection is recategorized?	Bill Ryan questions the fear-porn label; ThePythonicCow later states that his position was not categorical safety reassurance. Preserve each participant's actual scope and ask what evidence would change the relevant concern.	Bill Ryan #220; ThePythonicCow #234; ThePythonicCow #285; ThePythonicCow #303; ThePythonicCow #323; Nick Matkin #393

Existing question	Contribution to follow	New forum routes
G048 — Does a balanced-looking report preserve the actual unresolved question?	A response to New York Times reporting raises foreign-influence framing and financial-interest disclosure. Compare the original story, response, supporting records and what each representation makes available for scrutiny.	Kryztian #366
G051 — Which versions, duplicate posts or access barriers change the record?	The batch records link repairs, further circulation of The Hague account, temporary film access and playback trouble. Preserve version and access history alongside the source content.	Franny #235; Hervé #236; ThePythonicCow #237; ExomatrixTV #252; onawah #253; ExomatrixTV #254; onawah #335; Bill Ryan #362; norman #365
G052 — How can community contributions return as practical help?	John's 22-route list and other contributions supply petitions, local participation, research access and mutual assistance. Follow which route produces a usable answer, a recovered record or practical help.	yelik #208; OopsWrongPlanet? #261; Hervé #265; ExomatrixTV #350; Bill Ryan #362; Cara #395; Melinda #397; Hervé #398
G053 — How do accounts of consciousness, spirit and human identity enter the inquiry?	Spiritual and technological accounts of human futures continue in the discussion. Preserve their meanings, proposed relations and practical implications with their own source form and investigation criteria.	onawah #233; ExomatrixTV #299; onawah #304; onawah #355; ThePythonicCow #378

1.11.13.5 Selected next-source routes The forum supplies these leads. The linked original documents and recordings were not independently reviewed in this forum-text pass. Their source forms and roles remain visible so a subsequent investigation can recover the appropriate record.

Source lead	Form and originating post	Useful next access
World Health Organization/RF institutional review; Stockholm apartment case-report lead; AGNIR-critique publication record	Different publication forms linked by John in #228	Recover methods, actual findings, disclosures and the underlying institutional documents for each.
Navy spectrum-impact memo; Wyden–Cantwell letter; Auction 102 record	Government engineering and policy leads in #369	Compare technical assumptions, adjacent-band limits, aggregate emissions, agency response and the final decision.

Source lead	Form and originating post	Useful next access
NR Physical Layer Specifications in 5G (New Radio); millimetre-wave literature index	Industry technical paper and a separate biological-research index recovered by Cara in #395	Use the vendor paper to identify engineering specifications; assess each health-study lead through its own original publication and funding record.
Ian Furgeson video; Melinda's transcription; Nick Matkin's challenge	Recorded account, community transcript and technical response	Compare exact wording, units, equipment and the distinction between an occupational experience and a later extrapolation.
Miso review lead; ginkgo research lead	Publications linked in #370 and #371	Recover the exposure, model, intervention and endpoint before considering a different radiation context.

1.11.13.6 Three bounded investigations this batch could support

1. **Weather-data interference:** follow G070 from the linked memo and letter to measured or modelled interference, applicable limits, agency decisions and forecast consequences. A useful result could confirm a specific concern, narrow it to defined conditions or document adequate protection.
2. **A local observation record:** follow G072 with the contributor's priorities, a verified device/band record (G054, G071), relevant comparison observations and a route to care. Causal explanation, practical support and later correction each retain their own completion conditions.
3. **A privacy control that survives privileged access:** follow G062 by specifying the data, administrator roles, linking operation and enforceable control being tested. Record where the proposed separation works, where it can be bypassed and what a participant can do afterwards.

Second-batch continuation: page 21 was the next unexamined page after batch 02; it is now covered in the third batch. This completes the requested second ten-page batch. The growing map now contains **76 potential investigation topics** from **400 posts**, with the new source relationships retained in the scope index.

1.11.14 Third batch: pages 21–30 — source recovery, practical handoffs and further investigation

30 October 2026 · posts #401–600 · 23 new or materially sharper questions, G077–G099 · 26 source-linked extensions to earlier topics.

The displayed posting dates run from **2 July 2019 to 3 February 2020**. This pass follows public text and linked descriptions in discussion order; long bibliographies and reproduced articles were skimmed for topic discovery. Displayed edit notes remain in the source index: several posts now contain versions edited in September 2024. The initial 76 questions and 400 source records are preserved. The additions below develop particular questions, useful distinctions and practical next work.

The emerging field includes occupational physiology, scientific-source recovery, democratic participation, everyday support, data governance, military applications and satellite engineering. The usefulness of a contribution can be assessed at that level while its proposed explanation remains available for examination. John's **Anti-Unsafe-5G** qualifier continues to govern representation of his position.

1.11.14.1 Contributions people can carry forward

- **Carry a technical correction through the record.** The earlier tower-climber transcript and units challenge continue in #403–#405. James Newell explicitly changes the frequencies to 1,500–2,800 megahertz. That creates a definite revision point for subsequent calculations and source checking.
- **Read the model's explanatory layer.** Bill Ryan raises the population projection in #415; Philippe identifies the footnote in #416; happyuk reproduces explanatory notes in #417. The notes make migration and economic assumptions available for scrutiny. A useful retrospective can now compare a specified model with demographic records.
- **Exchange what worked and what did not.** MartinNovotny #436 requests cross-country sharing of successful and unsuccessful steps. The request makes jurisdiction, language, institutional response and practical transfer part of the research object. #432 supplies one concrete Dutch consultation-submission route.
- **Share the work of making resources usable.** ExomatrixTV #438 supplies an extensive action archive. East Sun and Onawah later clarify a need for a manageable local starting point; John describes the burden of repeated requests in #506. A short shared navigation route could preserve both the curator's work and the reader's capacity to act. The retrieved version of #438 is headed as "75" tools and currently contains numbered entries through 78; its edit note is dated 26 September 2024.
- **Preserve an event's changing record.** The initial Anglesey post #521 explicitly withholds a 5G attribution. MartinNovotny #534 asks for toxicology and warns against losing that qualifier. #578 supplies a later report of post-mortem findings, its remaining toxicology qualification and the contributor's continued disagreement. These are recoverable stages of one inquiry.
- **Follow a source request to the recovered article.** onawah #592 asks for a real rollout source. Pam #593 supplies the text of a 2018 article naming several pilot cities, and #594 supplies its working link. The recovered article gives the next investigation a more specific object than the initial first-city question.
- **Record practical return at the level available.** Philippe #585 describes letters, technical contacts, petition involvement and organizing prompted by the discussion. That contribution can support a voluntary follow-up on outcomes and useful help, with wider reach left open.

1.11.14.2 Coverage for the third batch

Forum page	Post containers indexed	Displayed posting dates	Source range
21	#401–420	2nd July 2019 → 30th August 2019	#401 · #420
22	#421–440	30th August 2019 → 6th October 2019	#421 · #440
23	#441–460	6th October 2019 → 28th October 2019	#441 · #460
24	#461–480	28th October 2019 → 11th November 2019	#461 · #480
25	#481–500	16th November 2019 → 1st December 2019	#481 · #500
26	#501–520	2nd December 2019 → 11th December 2019	#501 · #520
27	#521–540	11th December 2019 → 22nd December 2019	#521 · #540
28	#541–560	22nd December 2019 → 4th January 2020	#541 · #560
29	#561–580	5th January 2020 → 18th January 2020	#561 · #580

Forum page	Post containers indexed	Displayed posting dates	Source range
30	#581–600	18th January 2020 → 3rd February 2020	#581 · #600

All 200 post containers have stable source routes. Videos, image-only material, underlying publications, actual funding disclosures and individual case records remain further access layers. The archive contains script-only tweet embeds; their identifiers were recovered from inert markup, while the tweet content remains unreviewed. Their recovery routes remain in the source index; tweet content is outside the ordinary-text coverage.

1.11.14.3 New or materially sharper investigation questions

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G077 — Which demographic components and assumptions produce a population forecast?	Bill Ryan raises Deagel's 2025 population projection; Philippe points to a footnote, and happyuk reproduces explanatory notes discussing migration and economic disruption. Recover the dated model, source version, deaths, births, migration and revisions, then compare the specified outcome with appropriate demographic records. Preserve what the model actually says about the cause of a projected change. **Builds on:** G045 · G051.	Maia Gabrial #406; Bill Ryan #415; Philippe #416; happyuk #417
G078 — Which eye and lens outcomes do the cited studies actually examine?	John's bibliography includes lens epithelial-cell work, cataract reports and occupational eye-cancer research. Separate the tissue, endpoint, experimental model, exposure and study design, then recover the original reports, comparison groups and disclosures. This could turn an undifferentiated harm claim into several answerable questions with different follow-up needs. **Builds on:** G008 · G015 · G064.	ExomatrixTV #420; ExomatrixTV #421; ExomatrixTV #422

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G079 — How could cardiac and hormonal observations be separated from work schedules and other exposures?	The reproduced occupational bibliography names heart-rate variability, blood-pressure rhythms, melatonin and stress hormones; a later smart-meter headline makes a cardiac claim. Recover each original study and actual field, shift schedule, sleep, medication, timing and comparison. Determine which observations concern transient physiology, sustained impairment or a clinical outcome before comparing occupations or devices. **Builds on:** G012 · G056 · G064.	ExomatrixTV #421; ExomatrixTV #422; Hughe #561
G080 — What makes an action used in one country transferable to another?	MartinNovotny asks for exchanges of successful and unsuccessful steps across jurisdictions. John supplies consultation, letter and action-resource routes. Record the legal authority, language, costs, participants, deadlines, response and later outcome of each attempt; identify what another community would have to adapt, including approaches that produced little useful response. **Builds on:** G035 · G052 · G067.	MartinNovotny #429; ExomatrixTV #432; MartinNovotny #436; ExomatrixTV #438
G081 — How does an authored article become a claim about a publication's institutional position?	A repost is headed as a Scientific American warning, while its text identifies Joel Moskowitz's contribution; a later article quotes an expert in that publication. Recover the original page, byline, genre, editorial framing, wording and linked studies. Track what changes when a hosting publication, an author and a wider institution are presented as the speaker. **Builds on:** G048 · G059.	Hervé #456; onawah #556

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G082 — What purposes and capabilities are documented for a military 5G trial?	A video description lists augmented or virtual training and smart warehouses; John also links a U.S.–China commission hearing on military integration. Recover the procurement, test plan, equipment, interfaces and demonstrated functions for each project. Trace any further proposed weapon capability through its own technical and operational requirements. **Builds on:** G027 · G041 · G064.	onawah #453; ExomatrixTV #486
G083 — How many satellites are requested, authorized, launched, operating or retired at a given date?	Bill Ryan and Mashika distinguish objects already in orbit from requests and future launch plans. Later newsletters report intended launches and expanding constellations. Build a dated ledger of applications, approvals, spacecraft, operational services, ground terminals and retirements, with the same unit of counting throughout. **Builds on:** G022 · G055 · G071.	Hughe #471; Bill Ryan #477; Mashika #478; onawah #500; onawah #589
G084 — What model would connect satellite operations with the global atmospheric electrical circuit?	A reproduced Firstenberg newsletter proposes effects through the ionosphere and the global circuit; Nick Matkin questions the quantities and comparison. Specify the proposed coupling, emitted and received energy, location, timing, background variation and predicted observable change, then recover a model and measurements capable of testing that particular relation. **Builds on:** G003 · G008 · G022.	Hughe #471; Nick Matkin #473

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G085 — How do measured fields, awareness, concern and symptoms relate in a community study?	Hughe reproduces a base-station study reanalysis that discusses measured exposure, symptom reports, concern and exclusions. Recover the original dataset and analysis, recruitment, missing data, timing, participant awareness and covariates. Ask which causal directions and alternative explanations the design can distinguish, and which require prospective or blinded follow-up. **Builds on:** G011 · G013 · G072.	Hughe #479
G086 — What can a safety poll learn from its question, options and participants?	John posts a safety poll; Nick Matkin requests accurate data before voting. Preserve the poll's purpose and exact options, information participants had, uncertainty choices, recruitment and responses. These features could clarify public priorities and understanding, alongside the separate research needed to assess an exposure or health outcome. **Builds on:** G049 · G061 · G076.	ExomatrixTV #461; Nick Matkin #462
G087 — What does frequency mean in a technical, experiential or spiritual statement?	Petra uses frequency in an account of personal and spiritual change, and Nick Matkin asks about definition and measurement. Preserve the intended meaning in each context. Where a statement proposes a physical mechanism, specify the quantity, unit, instrument and observation that would bear on it; record what would count as useful inquiry for the experiential account too. **Builds on:** G053 · G055.	petra #464; Nick Matkin #465; petra #467; Nick Matkin #468; onawah #518

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G088 — How can an existing resource archive become a usable next step for a particular person?	John points to his extensive action list when readers ask what they can do. Onawah and East Sun clarify the need for a local, manageable starting point; John also describes repeated demands on the curator. Co-design a short route by jurisdiction, available time, skills and desired outcome, with shared maintenance and an easy way to return the result. **Builds on:** G049 · G052 · G076.	ExomatrixTV #438; East Sun #492; onawah #493; ExomatrixTV #495; onawah #496; East Sun #497; ExomatrixTV #506; onawah #507; Philippe #572
G089 — How can a useful contribution remain assessable across disagreement about its author's other positions?	The discussion of Chris Hedges, Noam Chomsky and Amy Goodman moves between specific contributions and wider reasons to exclude their work. Name the contribution under examination, its source and relevant dependencies. Preserve disagreements elsewhere while asking whether they change the usefulness or reliability of the particular contribution being considered. **Builds on:** G046 · G048 · G052.	DaveToo #508; onawah #509; DaveToo #510; onawah #511
G090 — What orbital-debris and collision assumptions govern a proposed constellation?	The reproduced constellation article raises crowding, debris and collision risk. Recover orbital shells, spacecraft lifetime, manoeuvre capability, tracking, failure rates, disposal plans and the model's assumptions about other operators. Follow the mitigation commitment through to observable operations and responsibility for a failed spacecraft. **Builds on:** G022 · G023.	onawah #517

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G091 — How resilient is a constellation to common hardware failures or a severe solar event?	The same article questions rapidly deployed components and space-weather exposure. Recover qualification tests, redundancy, radiation tolerance, shared failure modes, recovery plans and dependencies of users on the service. Compare ordinary individual failures with a scenario affecting many spacecraft or ground systems at once. **Builds on:** G022 · G060.	onawah #517
G092 — Under what terms can a household camera feed enter a policing system?	John links a report about Amazon Ring and police partnerships. Recover the actual agreement, data route, requesting authority, household and bystander choices, retention, disclosure, audit and remedy. This provides a specific case for investigating how privately installed sensors can become part of public surveillance. **Builds on:** G025 · G029 · G062.	ExomatrixTV #491
G093 — How are shared telecom costs allocated between wired and wireless services?	IRREGULATORS material alleges that accounting rules and cross-subsidies diverted resources from wired networks. Recover the challenged rule, filings, audited accounts, allocation formula, state utility duties, court disposition and settlement terms. Trace who paid, what service was promised and what was delivered at a defined place and date. **Builds on:** G031 · G036 · G066.	Hughe #529; onawah #538

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G094 — What consent and governance govern the reuse of petition signatures and coalition resources?	A reproduced Claire Edwards message disputes an appeal's association with another organization and asks about website funding. Treat the message as a participant's account of a dispute. Recover the original consent wording, data-use permissions, governance, funding disclosures, replies and correction route before assessing any allegation or proposed remedy. **Builds on:** G025 · G033 · G061.	Hughe #571; onawah #589
G095 — Could a new unlicensed wireless use interfere with an existing utility network?	John's link collection includes a utility-industry objection to unlicensed wireless applications near smart-meter systems. Recover the submission, actual bands, receiver performance, interference assumptions and proposed sharing conditions. Follow the engineering comparison and regulator's response through to service reliability and any required mitigation. **Builds on:** G032 · G060 · G070.	ExomatrixTV #575
G096 — What changes can participants document from a long-running public discussion?	Nick Matkin asks what the thread accomplished. Onawah identifies possible pathways; Philippe describes letters, contacts, a petition and organizing prompted by participation. A voluntary follow-up could record specific actions, help received, burdens, unanswered requests and outcomes while retaining uncertainty about wider reach and attribution. **Builds on:** G049 · G052 · G072.	Nick Matkin #581; onawah #582; Philippe #585

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G097 — Which return-current and wiring conditions explain a building-field measurement?	Ernie Nemeth describes an electrical-installation job and a claimed dirty-neutral problem. Recover the circuit, grounding and bonding arrangements, load balance, field spectrum, instruments and before/after records. Have the proposed explanation and any modification assessed against the applicable electrical-safety requirements by a qualified professional; retain the contributor's account separately from a transferable installation procedure. **Builds on:** G010 · G054 · G068.	Ernie Nemeth #588
G098 — How do satellite constellations affect astronomical observations and access to the night sky?	A January newsletter introduces astronomers' objections, an appeal and an environmental-review argument. Recover the original observing records, optical brightness, radio interference, orbit and time distribution, mitigations and affected research. Follow the environmental-review question through the actual authorization, legal argument and any later decision. **Builds on:** G022 · G023 · G070.	onawah #589

G099 — What comparison could test a proposed relation between a rollout location and an outbreak?	Onawah requests a source for Wuhan rollout timing; Pam recovers an article listing multiple pilot cities, and later posts propose immune vulnerability and co-exposure mechanisms. Reconstruct actual activation, bands, exposure and population timelines across the listed cities, then specify a comparison addressing infection, other exposures, case detection and causal direction. Preserve the pilot-plan article's scope and each later hypothesis's distinct source. **Builds on:** G003 · G010 · G071 · G072.	onawah #592; Pam #593; onawah #594; frankstien #598; justntime2learn #600

1.11.14.4 Useful extensions to existing questions These contributions retain their earlier IDs and source routes. Each row identifies what the new material makes possible to pursue.

Existing question	Contribution to follow	New forum routes
G001 — Which technology and frequency does each account concern?	An asserted expansion of SMART prompts a request for its meaning. Recover the relevant product or standards terminology and the origin of the asserted expansion before using the acronym to identify equipment.	Maia Gabrial #401; Franny #402
G006 — Which frequency-specific skin or sweat-duct interactions merit replication?	Sweat-duct videos and discussion of skin add source routes for a frequency-specific interaction. Recover the experiment, tissue model, field and proposed endpoint.	Constance #407; James Newell #409
G014 — What evidence is needed for child, pregnancy and reproductive questions?	The bibliography and Martin Pall interview add reproductive studies and a sharply timed forecast. Retain the original model, population, exposure and conditions of each claim.	ExomatrixTV #420; ExomatrixTV #422; Hervé #439; Hughe #536

Existing question	Contribution to follow	New forum routes
G017 — Which protective products or practices withstand independent evaluation?	Meter users ask how to evaluate protective products; later posts offer plug-in devices, shungite and competing criticism. Independent performance and health-outcome questions, price, endorsements and commercial interests remain separately recoverable.	conk #455; MartinNovotny #457; onawah #503; onawah #541; onawah #579; Nick Matkin #580; onawah #583; Philippe #586; Nick Matkin #587
G021 — How should a local bird-mortality event be investigated?	The Anglesey bird-death sequence preserves the initial contributor's explicit non-attribution, requests for toxicology, an official-statement report and a later post-mortem news update that still mentions pending toxicology. Retain those stages and the contributor's continued disagreement; recover the final case record.	Did You See Them #521; Nick Matkin #522; Did You See Them #523; Nick Matkin #525; Did You See Them #527; MartinNovotny #534; James Newell #535; Nick Matkin #537; Did You See Them #578
G026 — How does network ownership change access, oversight and geopolitical risk?	Military-integration and 6G-research reports add dated procurement and research leads. Identify the particular program and milestone before transferring its status to an entire national supply chain or later network generation.	onawah #453; Mashika #476; ExomatrixTV #486; Mashika #567
G031 — Which wired or user-controlled alternatives remain practically available?	Wired alternatives recur in proposed action lists and the network-accounting dispute. Compare actual access, obligations, delivered performance, cost and fallback options for the community concerned.	ExomatrixTV #438; ExomatrixTV #460; Hughe #529; onawah #538
G032 — Which health effects and exposure durations do standards address?	The Russian warning-sign proposal, body-spacing report and Federal Communications Commission legal-action announcement supply different routes into standards and disclosure. Recover the proposal, agency document, test requirement and filed claim in their respective jurisdictions.	onawah #446; Hervé #466; onawah #556; onawah #595

Existing question	Contribution to follow	New forum routes
G033 — How do funding and institutional incentives relate to research results?	Bibliographies, advocacy newsletters, product promotions and organizational-funding questions require source-specific funding and interest records. A cited paper's funding independence remains unexamined until its original disclosure and funding trail are recovered.	ExomatrixTV #420; ExomatrixTV #421; ExomatrixTV #422; onawah #452; onawah #454; Hughe #571; onawah #579; Philippe #586
G035 — How did siting rules redistribute local powers and responsibilities?	Dutch protests, cross-country exchanges and an article about the American Legislative Exchange Council add local-decision and model-legislation leads. Compare the actual bill text, amendments, sponsors, adopted law and decision authority across jurisdictions.	ExomatrixTV #425; MartinNovotny #429; ExomatrixTV #433; ExomatrixTV #435; MartinNovotny #436; onawah #584
G037 — What results followed the proposed notices of liability?	John reproduces Hein Brik's notice to a Dutch minister and links its consultation route; Mypos asks about an InPower method's results. Follow submission, acknowledgement, legal response and outcome as separate stages.	ExomatrixTV #432; ExomatrixTV #438; Mypos #558
G041 — What would make a communications system capable of a specified weapon effect?	Technical requests concerning acquired streetlight equipment identify a possible inspection protocol: provenance, schematic, components, emissions and independent engineering review. Preserve the distinction between a proposed test and a completed measurement.	ExomatrixTV #460; ExomatrixTV #482; ExomatrixTV #549; ExomatrixTV #566; Nick Matkin #580
G043 — Which historical microwave episodes have recoverable primary records?	John's bibliographies and later history post add occupational studies, the Foreign Service report and a later Lilienfeld reinterpretation. Recover report, translation, reanalysis, exposure setting and publication date separately.	ExomatrixTV #421; ExomatrixTV #422; ExomatrixTV #519; Nick Matkin #520

Existing question	Contribution to follow	New forum routes
G045 — How do dated forecasts compare with subsequent developments?	Deagel, reproductive-collapse, 6G and constellation forecasts provide dated comparison objects. Preserve assumptions, revisions, outcome windows and later edited versions when evaluating their trajectories.	Maia Gabrial #406; Bill Ryan #415; happyuk #417; Hervé #439; Mashika #476; onawah #500; ExomatrixTV #513; Mashika #567
G046 — What happens when a safety objection is recategorized?	The thread discusses shill labels, technical participation and a bird-event question recast as a demand to defend 5G generally. Compare the precise statement, reply and requested evidence before assigning a participant a wider position.	onawah #442; Nick Matkin #473; Cara #474; Nick Matkin #475; Did You See Them #521; Hughe #524; Nick Matkin #525
G047 — How do music, artistry and presentation affect understanding?	An Irish schoolchildren's song and Philippe's request for printable materials add practical communication routes. Recover authorship, permission, intended audience, source support and what makes a locally usable version.	Hughe #544; Philippe #572
G049 — Which source requests or distinctions improve the next inquiry?	Requests for original sources, autopsy findings, testimony and a rollout article supply concrete opportunities to make statements inspectable. Follow whether the recovered material answers the actual question asked.	onawah #442; onawah #445; Nick Matkin #462; MartinNovotny #534; ExomatrixTV #543; Nick Matkin #580; onawah #592; Pam #593; onawah #594
G050 — When does a contributor's explanation visibly change after source recovery?	James Newell explicitly changes the figures to 1,500–2,800 megahertz after Nick Matkin's units challenge. Retain the correction alongside the earlier transcript and remaining source questions; identify which later calculations must change with it.	James Newell #403; Nick Matkin #404; James Newell #405

Existing question	Contribution to follow	New forum routes
G051 — Which versions, duplicate posts or access barriers change the record?	Later edits, translated reports, video backups, time-limited access and script-only tweet embeds affect what this pass could inspect. The source index retains displayed posting dates, edit notes and recovered embed identifiers.	ExomatrixTV #420; ExomatrixTV #433; ExomatrixTV #438; onawah #452; ExomatrixTV #459; onawah #487; ExomatrixTV #494; ExomatrixTV #501; ExomatrixTV #514; ExomatrixTV #533; ExomatrixTV #540; ExomatrixTV #562; ExomatrixTV #564; ExomatrixTV #597; ExomatrixTV #599
G052 — How can community contributions return as practical help?	John's expanded resource post, MartinNovotny's exchange proposal, requests for a manageable starting point and Philippe's later account of actions offer a traceable community-return sequence.	MartinNovotny #436; ExomatrixTV #438; East Sun #492; ExomatrixTV #495; onawah #496; East Sun #497; ExomatrixTV #506; onawah #507; Philippe #572; Philippe #585
G054 — What can a particular RF meter measure reliably?	Questions about affordable meters and product testing recur. Check each dated claim against the specific instrument, bands, calibration, pulse response and intended comparison.	conk #455; MartinNovotny #457; onawah #541
G055 — How does checking units change a technical safety argument?	Tower electrical consumption, radiofrequency, radiated power and waveform continue to enter different arguments. Keep their units and conversion steps explicit, including the posted megahertz correction.	James Newell #403; Nick Matkin #404; James Newell #405; Hughe #411; ExomatrixTV #504; onawah #556
G058 — Whom do the test body and exposure scenario represent?	A reproduced French report compares testing against the body with a separation gap and raises older handsets. Recover the agency advice, test configuration, affected models, remedy and measured result for each version.	Hervé #466; Hughe #536

Existing question	Contribution to follow	New forum routes
G064 — How do repeated occupational exposures compare with public exposure?	Swedish radar accounts, other occupational bibliographies, Nick Matkin's personal work history and an ambulance article require apparatus- and workplace-specific exposure records. The ambulance article's update reports a service denial and unresolved source questions.	ExomatrixTV #421; ExomatrixTV #422; Nick Matkin #520; onawah #539
G072 — How could community observations become a useful prospective follow-up?	Swiss activation complaints and an ambulance article provide potential follow-up settings. Establish actual installation or trial participation, baseline, exposure, case definitions, comparison and privacy-respecting support before drawing a relation from timing.	Hervé #418; onawah #539
G076 — What information would make a right-to-know policy usable?	The warning-sign proposal, French carrying-position report and requests for locally usable materials sharpen the information-design question. Establish the document's status, the decision a reader needs to make and a reachable response route.	onawah #446; Hervé #466; Philippe #572

1.11.14.5 Selected next-source routes The following are source-recovery leads from the thread. Their original documents and recordings have not been independently reviewed in this forum-text pass. For the requested funding filter, recover each original publication's funding statement, author relationships and funder role; retain "undisclosed" or "unresolved" wherever the record does not establish independence.

Source lead	Form and originating post	Useful next access
Bibliography, part one; occupational material; historical and clinical references	Mixed bibliographic entries, reproduced descriptions and comments supplied by John	Recover lens-cell, cardiac-rhythm and occupational studies individually; verify bibliographic details, study design, funding and the words belonging to each original author.

Source lead	Form and originating post	Useful next access
Foreign Service report and Lilienfeld reinterpretation leads; later historical-record reminder	Government-report reference, later publication and forum commentary	Recover the 1978 report, the later analysis and the historical exposure records; retain issuing body, country, date, translation, methods and subsequent interpretation.
Dutch consultation submission	Authored notice reproduced in #432	Obtain the submitted text, receipt, response and later proceedings. Its inclusion in a consultation is a source status distinct from a judicial finding.
Base-station symptom study reanalysis	Publication reproduced in #479	Recover the article, original dataset, exclusions, field measurements, concern variables and funding disclosures.
Military trial description; commission-hearing route	Media description and a linked U.S.–China hearing transcript	Obtain the trial plan, procurement and transcript passages that document each claimed purpose or capability.
IRREGULATORS; Book of Broken Promises	Advocacy organization, research resource and litigation account in #529 and #538	Recover the specific challenged accounting rule, case docket, decision, allocation records and settlement implementation.
Ambulance article with update	Investigative article reproduced in #539	Begin with the update reporting a service denial; compare the original announcements, actual participating service, trial equipment, dates and occupational records.
China pilot-city article	May 2018 media article recovered in #593–#594	Follow its operator and pilot-plan leads to actual activation records in all named comparison locations.
Astronomy and environmental-review leads	Newsletter referencing astronomers' observations, an appeal and a forthcoming legal article	Recover each original document, its publication status, author's argument, official authorization and any later decision.

1.11.14.6 Three bounded investigations this batch could support

1. **An independently funded historical-health source table:** start with G078, G079 and G043. Recover a small set of original studies and government records, then record country, publication form, exposure, population, endpoint, comparison, funding, author interests and the result's actual scope. A useful first return is a verified source packet with clearly marked remaining gaps.
2. **A practical cross-country handoff:** combine G080 and G088. Choose one participant's jurisdiction, capacity and goal; identify an applicable decision or response route; assign a small next task and a maintainer. Record the reply, useful help, burden and any unsuccessful approach so the next community can adapt it.

3. **A participant-controlled follow-up on the archive's usefulness:** develop G096 from Philippe's specific account and the earlier requests for help. Invite voluntary descriptions of what changed, what remained unresolved and which contribution helped. Keep participant control over disclosure, the curator's workload and the opportunity to revise the record throughout.

These routes give process calibration a concrete object: what was recovered, whose qualifier survived, which relation was clarified, what practical return followed and what would cause the next revision. The exchange about assessing a contribution across disagreement (G089) supplies a direct case for Beyond Agreemurmelism in practice.

Third-batch continuation: page 31 was the next unexamined page after batch 03; it is now covered in the fourth batch. This completes the third ten-page batch. The growing map contains **99 potential investigation topics** from **600 indexed post containers**, with the access gaps and source relationships retained in the scope index.

1.11.15 Fourth batch: pages 31–40 — open inquiry, accountable decisions and correction that carries forward

30 October 2026 · posts #601–800 · 17 new or materially sharper questions, G100–G116 · 36 source-linked extensions to earlier topics.

The displayed posting dates run from **6 February to 28 October 2020**. Public text and linked descriptions were screened in discussion order; long reproduced articles and bibliographies were skimmed for topic discovery. Several retrieved versions have later edits in September or October 2024. The index retains those dates and the source routes. Recordings, image content, original studies, funding disclosures and case records remain further access layers, apart from the expressly identified publication-status check below.

1.11.15.1 The process governing this pass The 10+1 keeps inquiry, self-honesty, care, wonderment, independence and correction mutually active. The 1888 intelligence-properties taxonomy gives that orientation practical work: perceive a contribution, distinguish its type, relate it to its sources, imagine possible explanations, judge the next useful step, learn from the result and retain the correction. A worthwhile unfamiliar relation receives room to develop; a consequential assertion receives the examination appropriate to it.

Meta Processing keeps the source, editorial selection, representation and resulting next move inspectable. Topologetics preserves answer-changing relations and recovery routes. **TCoAw** (Thinking, Consciousness, Awareness) keeps the present focus temporary and the wider field available. Healthy Ambiguity connects that room with responsibility for the next move.

PQCE (Process Quality Calibration Evaluation) examines how the evaluation acquired authority, whether a clarification can change it and what happens next. John's distinction between PQCE and flawed flagging governs this pass. Beyond Agreemurmelism keeps the usefulness of agreement and disagreement open to the same examination. The Asymmetric Grace and Bidirectional Scrutiny page distinguishes the diagnosed imbalance from the valued Symmetric Grace: dignity, faithful representation and correction remain available to participants, institutions, critics and this editor, with scrutiny proportionate to power, imposition and consequence.

The **DEDDA** (Deep Ethical Drift Detector App) conversational skill was applied to source-to-summary correspondence, qualifiers and provenance. Three concrete checks shaped the draft: preserve the different propositions in the illness discussion; retain the stated purpose of sharing a disputed clip; and recover help already supplied before proposing further help. The skill's comparison remains open to correction alongside the inventory.

1.11.15.2 Contributions people can carry forward

- **Ask for the study behind an effects list.** Reinhard #628 asks John for reliable research sources for particular animal effects. That gives the next investigation a concrete

retrieval task: the species, experiment, exposure and endpoint behind each item, followed by its actual findings and disclosures.

- **Make historical records easier to recover across countries.** ExomatrixTV #633 proposes coordinated public-record requests for military and naval microwave research. Later reproduced material in #778 includes specific report identifiers. A shared document table could preserve country, author, issuing or holding body, translation, date, exposure and response to a request.
- **Keep criticism within the source field.** In #652, John shares an interview whose description names identifiable facts and shortcomings of the coronavirus hypothesis. Its recording remains a next access layer. Its presence matters when representing what participants made available for examination.
- **Carry a moderation rule with reports about a movement.** #676 and #683 distinguish the larger group from individual acts. #685 reproduces a rule prohibiting calls for violence or property damage, including material presented as self-defence. The rule, reported incidents, actual moderation and later descriptions can be compared as separate records.
- **Recover the purpose of sharing a disputed object.** Eric J (Viking) #714 asks what others think of a video. In #719, Nick Matkin supplies component-based reasons for his assessment; Tintin #720 thanks him and says he shared the clip for examination. The source sequence supports technical checking and a faithful account of that request.
- **Supply an accessible route to a source.** norman #664 cannot play a video; greybeard #665 provides an explicitly approximate account. Later, #751 supplies a panel-recording route and #776 identifies a trimmed audio version. Preserve the distinction among recording, participant summary and edited derivative while following which version becomes usable.
- **Recover an answer already given.** Rechecking malformed source wrappers recovered John's reply in #573 to Philippe's printing-material request: use local or online manufacturers that accept a person's own design. It also recovered the satellite forecast below the tweet in #551. These two earlier access records have been corrected, with their original states retained in the index. Their tweet contents remain unreviewed. This recovery adds prior help to the map and changes what a later editor should present as still missing.

1.11.15.3 Coverage for the fourth batch

Forum page	Post containers indexed	Displayed posting dates	Source range
31	#601–620	6th February 2020 → 1st March 2020	#601 · #620
32	#621–640	3rd March 2020 → 14th March 2020	#621 · #640
33	#641–660	14th March 2020 → 30th March 2020	#641 · #660
34	#661–680	3rd April 2020 → 12th April 2020	#661 · #680
35	#681–700	12th April 2020 → 27th April 2020	#681 · #700
36	#701–720	27th April 2020 → 21st May 2020	#701 · #720
37	#721–740	22nd May 2020 → 10th June 2020	#721 · #740
38	#741–760	10th June 2020 → 30th July 2020	#741 · #760
39	#761–780	31st July 2020 → 4th September 2020	#761 · #780
40	#781–800	4th September 2020 → 28th October 2020	#781 · #800

The extraction now follows the enclosing content wrapper as well as the narrow message box. That recovered ordinary text in #656 and parts of #715, #719 and #720, including the component critique and the reply acknowledging it. A bounded recheck of the earlier 600 post wrappers identified the additional ordinary text in #551 and #573 described above. All 99 prior question records and earlier extension entries remain intact; two earlier source-access records carry explicit before-and-after corrections.

1.11.15.4 New or materially sharper investigation questions

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G100 — What would establish a particular relation between exposure, the microbiome and an outcome?	An interview promotion connects wireless exposure, pesticides, microbes and illness; a later family account includes mold-related illness. Recover the particular organism or community, sampled site, exposure, co-exposures, comparison and measured function. Follow any proposed intervention through its own study and funding record, retaining the practical needs reported by the family. **Builds on:** G008 · G010 · G013 · G017.	onawah #629; onawah #756
G101 — Which signal path is proposed when broadband is described as travelling over power lines?	The AirGig article and a later electricity-network question bring several architectures into one discussion. Recover the actual equipment and distinguish a guided surface link, communication on household wiring, a wireless access link and the electrical supply. Map frequencies, coupling, emissions, operating dates and the connection that reaches a user. **Builds on:** G001 · G010 · G024 · G097.	onawah #650; Philippe #794

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G102 — What operation does crowd control name in a particular government statement?	John links a Dutch parliamentary clip, a translated commentary and earlier justice-ministry material. Recover the full original-language statement, date, context, translation and program description. Identify whether the proposed operation concerns monitoring, traffic or crowd management, behavioural intervention, a weapon effect or a combination, and trace the specific hardware and authority needed for it. **Builds on:** G029 · G041 · G043 · G082.	ExomatrixTV #615; ExomatrixTV #616; onawah #725; ExomatrixTV #793
G103 — How are adverse-effect thresholds translated into operational exposure limits?	A reproduced opinion article quotes tissue-temperature thresholds from the 2020 guidelines. Recover the original passage together with its definitions, reduction factors, averaging intervals, spatial assumptions and resulting restrictions. Reproduce the derivation and compare what the source, the commentary and an actual compliance test each describe. **Builds on:** G032 · G055 · G058 · G078.	ExomatrixTV #635; ExomatrixTV #645; onawah #659; Gwin Ru #759
G104 — How do publication, filing dates and venue affect access to review of a regulatory decision?	Litigation reports describe petitions, Federal Register publication, consolidation and later briefs. Recover the underlying order, notice, filings, motions and procedural decisions in date order. Track what each step changes about timeliness, venue, standing and the opportunity for a merits hearing, preserving the parties' arguments and the court's determinations separately. **Builds on:** G035 · G037 · G040 · G066.	Hughe #604; frankstien #609; onawah #662; onawah #749; onawah #798

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G105 — How can infrastructure inquiry protect workers and preserve scrutiny of those making the decisions?	Reports of threats and fires appear alongside John's group rule prohibiting calls for violence or property damage. Recover incident records, the actual network or work being performed, the reported conduct and the group's moderation rule. Keep workers, decision-makers, peaceful participants and individual acts distinguishable while tracing lawful information and accountability routes. **Builds on:** G044 · G046 · G075.	greybeard #669; Mashika #670; greybeard #671; ExomatrixTV #676; ExomatrixTV #683; ExomatrixTV #685; edina #690; ExomatrixTV #744
G106 — Which distinct propositions are being examined in a claimed 5G–illness relation?	The thread contains an if-question about susceptibility, causal assertions, symptom-similarity questions, a shared interview description examining shortcomings, and a separate paper proposing intracellular virus production. Preserve speaker, wording and version for each. Specify the prediction, comparison and possible revision belonging to each proposition, so an answer to one can reach the claims that actually depend on it. **Builds on:** G008 · G046 · G049 · G099.	ExomatrixTV #610; ExomatrixTV #618; onawah #626; onawah #627; ExomatrixTV #638; ExomatrixTV #652; ExomatrixTV #696; onawah #757; ExomatrixTV #770
G107 — Which physical and clinical variables would an oxygen-related explanation need to connect?	Posts move among atmospheric absorption, oxygen uptake, hemoglobin, clinical observations and proposed mechanisms. Recover the quantity at each step, the actual exposure, patient measurements, diagnoses and comparison. Ask what observations distinguish the proposed pathways and what further work would connect them; retain treatment statements as attributed source claims requiring their own clinical evaluation. **Builds on:** G008 · G009 · G011 · G055 · G099.	onawah #623; Michi #672; Hughe #673; Hughe #697; onawah #717; Luke Holiday #718

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G108 — Under what conditions could a terrestrial network interfere with navigation or timing receivers?	A report about the Ligado decision describes disagreement among regulators, military bodies and other agencies. Recover the application, order, technical tests, receiver populations, location and power assumptions, protection criteria and responses. Follow the particular interference scenario through mitigation and service consequences. **Builds on:** G032 · G060 · G070 · G095.	onawah #700
G109 — What rights and duties arise when one household hosts transmission equipment affecting neighbours?	The proposed expansion of the Over-the-Air Reception Devices rule raises host contracts, transmitting versus receiving equipment, local permits, neighbouring households and disability accommodation. Recover the proposal, submissions, adopted text, actual installation and available remedies. Identify who can consent to which activity and who bears its consequences. **Builds on:** G016 · G025 · G035 · G066 · G076.	onawah #692; onawah #749
G110 — Which equipment changes qualify for a faster infrastructure-upgrade process?	The June upgrade-order report identifies disputes about approval clocks, qualifying equipment, concealment and activity beyond an existing site. Compare the governing rule, operator request, physical change, local conditions and final decision. This could identify precisely which review remains available and which deadline applies to the installation concerned. **Builds on:** G035 · G040 · G067 · G071.	onawah #678; onawah #724

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G111 — What connects a molecular resonance model with a proposed biological assembly mechanism?	A book-chapter citation is followed by a social-media explanation about viral activation; a later paper proposes virus-like structures in cells. Recover each source's model, scale, wavelength, boundary conditions, biological material and observations. Test the links supplied by the later explanation separately from those demonstrated or proposed in the cited work, retaining publication and revision status. **Builds on:** G006 · G008 · G042 · G099.	onawah #702; onawah #757; onawah #758; Luke Holiday #760
G112 — What observations could distinguish explanations for decision-makers accepting an exposure that also reaches them?	Tomkoyote and Luke Holiday repeatedly ask how shared susceptibility fits the rollout they are trying to understand. Replies propose different exposure patterns, protections and motives. Recover public decision records, stated risk assessments, incentives and available alternatives; specify what would distinguish the explanations while leaving unsupported details and private motives unresolved. **Builds on:** G017 · G033 · G045 · G046.	Tomkoyote #658; Luke Holiday #732; onawah #733; Luke Holiday #734; onawah #735; Luke Holiday #736; norman #737; Hughe #739; Luke Holiday #740; ExomatrixTV #747
G113 — What makes a voluntary phone-free place workable for the people using it?	Campaigns propose phone-free cafés, libraries and communities, while other posts discuss wired alternatives and the difficulty of moving away from exposure. Co-design a bounded trial around participants' aims, communication needs, accessibility, emergency contact, work and social life. Follow practical benefits, burdens, uptake and revisions with participants retaining a choice. **Builds on:** G016 · G018 · G031 · G060 · G069.	onawah #717; onawah #731; onawah #745; onawah #756; ExomatrixTV #786; ExomatrixTV #795

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G114 — What would make a public technical debate useful beyond its agreement or disagreement outcome?	John requests a faithful, open debate and identifies source collections to bring to it; later posts announce a direct panel and provide a recording route. Recover the actual event, questions, source access, moderation, reply opportunities and follow-up. Evaluate which distinctions became clearer, what remained unanswered and whether a correction reached subsequent representations. **Builds on:** G046 · G048 · G049 · G086 · G089.	ExomatrixTV #637; ExomatrixTV #681; onawah #746; onawah #751; ExomatrixTV #770; ExomatrixTV #779
G115 — How can a component inspection or image check improve an inquiry without judging everyone who shared the clip?	A circuit-board video prompts a request for assessment. Nick Matkin identifies connectors and a manufacturer; Tintin thanks him and clarifies his purpose in sharing it. Recover the original frames, device provenance, component specifications and later representations. Related streetlight footage invites a separate check of equipment and recording conditions. **Builds on:** G024 · G042 · G049 · G050 · G054.	ExomatrixTV #712; Eric J (Viking) #714; Tintin #715; Nick Matkin #719; Tintin #720
G116 — Can the proposed channel–oxidative-stress–bradykinin chain be connected under comparable conditions?	Luke Holiday combines several sources into a proposed biological pathway after John reproduces Martin Pall's mechanism argument. Recover each original study, organism, tissue, intervention, direction of effect and exposure. Identify the untested connecting steps, predictions and observations that could revise the chain, keeping a proposed clinical implication distinct from an observed outcome. **Builds on:** G008 · G056 · G079 · G099.	ExomatrixTV #778; Luke Holiday #780; ExomatrixTV #781; Luke Holiday #782

1.11.15.5 Useful extensions to existing questions

Existing question	Contribution to follow	New forum routes
G003 — What changes when exposure comes from many sources over time?	John's proximity, duration, overlapping-transmitter and co-exposure questions recur in a more detailed list. Translate each dimension into a recoverable exposure history and measurement with uncertainty.	ExomatrixTV #624; ExomatrixTV #638; ExomatrixTV #681; ExomatrixTV #786; ExomatrixTV #795
G004 — How should moving beams and multiple antennas be measured?	The satellite discussion asks whether service is broadcast uniformly or uses directed links and ground stations. Recover antenna patterns, traffic, beam scheduling and user-terminal records for the actual system.	onawah #661; onawah #730; norman #737; onawah #765
G007 — Does pulse structure change an outcome at otherwise comparable exposure?	Pulsation remains part of John's question list and Pall's mechanism argument. Recover the relevant waveform and experiment rather than letting frequency alone stand in for the proposed exposure.	ExomatrixTV #624; ExomatrixTV #778
G014 — What evidence is needed for child, pregnancy and reproductive questions?	The later forecast essay adds reproductive, developmental and genetic claims. Recover the original study, exposure, predicted time window and measured endpoint for each branch.	onawah #691; onawah #701; ExomatrixTV #778
G015 — How do cancer findings transfer across species, signals and time?	The James C. Lin article and engineering-review citations add cancer-source routes. Retain study, species, endpoint and author separately from the institution hosting or indexing the publication.	ExomatrixTV #642; onawah #644; onawah #763; onawah #768
G017 — Which protective products or practices withstand independent evaluation?	Commercial interviews, event promotions and protection products remain part of the source field. Greybeard explicitly notes a product for sale in the final post. Recover product identity, disclosed interests, independent performance and user outcomes.	onawah #606; onawah #629; ExomatrixTV #630; onawah #640; onawah #691; onawah #750; greybeard #800
G018 — What support remains useful while a causal explanation is unresolved?	A family's schooling and illness account, questions about coping with heavy topics and requests for community help identify practical needs worth following alongside causal investigation.	East Sun #648; onawah #731; onawah #753; ExomatrixTV #755; onawah #756; Lunesoleil #799

Existing question	Contribution to follow	New forum routes
G019 — Why were particular trees removed or altered?	Tree, insect, bird, cattle and later wildlife claims recur across source collections. Recover species, event dates, investigation reports, exposure conditions and competing explanations before linking separate events.	ExomatrixTV #624; ExomatrixTV #681; ExomatrixTV #683; ExomatrixTV #778; onawah #796
G022 — What changes when connectivity extends through satellite constellations?	Newsletters add constellation applications, ground terminals, launch counts, fuel and sky impacts. Preserve date and operational stage, and recover the original filing or model for each claim.	onawah #661; onawah #730; onawah #764; onawah #765; onawah #767; onawah #796
G026 — How does network ownership change access, oversight and geopolitical risk?	The national-security strategy, UK–US–China negotiations and nationalized-network proposal add different ownership and procurement objects. Recover what was proposed, adopted, funded or implemented.	onawah #621; Akasha #660; greybeard #741; onawah #777
G029 — Which links connect a sensor observation to enforcement?	The recovered second part of the surveillance article discusses location tracking, quarantine enforcement and biometric systems. Trace the actual data route, purpose, legal authority, retention, access and exit conditions of each program.	onawah #656; ExomatrixTV #769; greybeard #784
G031 — Which wired or user-controlled alternatives remain practically available?	Wired municipal broadband and community participation recur in the summit description and Flattach resolution reproduction. Follow the adopted infrastructure choice, delivery, cost, accessibility and later review.	onawah #731; Hughe #752; onawah #777
G032 — Which health effects and exposure durations do standards address?	New guidelines, commentary about institutional independence and regulatory litigation supply concrete documents for comparison. Retain the applicable edition and the claimed relationship between a guideline, a binding rule and a compliance test.	ExomatrixTV #635; ExomatrixTV #645; ExomatrixTV #646; onawah #659; onawah #724; Gwin Ru #759; onawah #798

Existing question	Contribution to follow	New forum routes
G033 — How do funding and institutional incentives relate to research results?	John’s testing-independence challenge, media-advertising questions, summit affiliate links and a funding-dispute report require specific disclosures and records. Scrutiny can reach the critic, commercial supplier, publisher, regulator and this inventory through the evidence relevant to each role.	ExomatrixTV #624; ExomatrixTV #646; ExomatrixTV #681; onawah #691; onawah #703; ExomatrixTV #704; onawah #716; ExomatrixTV #747; onawah #750; ExomatrixTV #779
G035 — How did siting rules redistribute local powers and responsibilities?	Pandemic-period siting and participation concerns connect to local authority and consultation. Recover the actual application, notice, public access, decision and any change in procedure.	onawah #639; ExomatrixTV #647; bluestflame #653; onawah #656; onawah #678; onawah #692; onawah #724
G037 — What results followed the proposed notices of liability?	Notice-of-liability material, filed petitions and a Canadian court-account video have different procedural statuses. Recover service, filing, response, order and subsequent remedy in each jurisdiction.	frankstien #609; onawah #639; onawah #662; onawah #728; Gwin Ru #759; onawah #798
G043 — Which historical microwave episodes have recoverable primary records?	John proposes cross-country public-record requests and Pall’s reproduced text supplies specific historical report identifiers. Recover the original author, country, publication, translation, holding agency, release date and exposure before interpreting a declassification label.	ExomatrixTV #618; ExomatrixTV #633; ExomatrixTV #683; ExomatrixTV #704; onawah #725; ExomatrixTV #778
G045 — How do dated forecasts compare with subsequent developments?	Extinction, rollout, demographic and dated political forecasts recur. Fix the actual source version, assumptions and outcome before retrospective comparison; preserve the possibility of a useful null or a revised prediction.	onawah #655; onawah #717; onawah #730; onawah #765; ExomatrixTV #778; onawah #783; onawah #788; ExomatrixTV #795

Existing question	Contribution to follow	New forum routes
G046 — What happens when a safety objection is recategorized?	John disputes a forum tag and wider anti-5G framing, distinguishes kinds of illness claims and supplies a group moderation rule. Compare the actual statement, published description, label, response and any correction without assigning one participant the whole movement.	ExomatrixTV #622; ExomatrixTV #624; ExomatrixTV #636; ExomatrixTV #637; ExomatrixTV #651; ExomatrixTV #676; ExomatrixTV #683; ExomatrixTV #685; ExomatrixTV #696; ExomatrixTV #744; ExomatrixTV #770; ExomatrixTV #779; ExomatrixTV #795
G047 — How do music, artistry and presentation affect understanding?	A protest song, communication-resource collections and a recovered printing reply provide practical communication routes. Preserve authorship, intended audience, usable formats and access to the source behind a short message.	Hughe #620; ExomatrixTV #681; ExomatrixTV #683; ExomatrixTV #698; ExomatrixTV #711
G049 — Which source requests or distinctions improve the next inquiry?	Reinhard requests the animal-study sources; John asks for feedback and corrections; participants provide original-document, video and recording routes. Follow the actual request, supplied material and subsequent use.	Reinhard #628; ExomatrixTV #633; ExomatrixTV #680; ExomatrixTV #681; Eric J (Viking) #714; Nick Matkin #719; Tintin #720; onawah #751; Anna70 #773; Bill Ryan #775; norman #776; ExomatrixTV #779
G050 — When does a contributor’s explanation visibly change after source recovery?	A unit challenge recurs when the pole-climber recording is reposted. A separate circuit-board sequence contains a specific critique and appreciative uptake. Preserve what changed locally and inspect later comparable circulation before claiming persistence.	TomKat #612; Nick Matkin #613; Eric J (Viking) #714; Tintin #715; Nick Matkin #719; Tintin #720
G051 — Which versions, duplicate posts or access barriers change the record?	Malformed markup, shortened links, access trouble, edited source versions and later publication status affect recoverability. This pass repaired its extraction and rechecked earlier wrappers, recovering ordinary text in #551 and #573; the original metadata and explicit corrections are retained in the index.	ExomatrixTV #602; onawah #656; Eric J (Viking) #663; norman #664; greybeard #665; Tracie (Bodhicee) #705; Tracie (Bodhicee) #706; Tracie (Bodhicee) #707; Tintin #715; Nick Matkin #719; Tintin #720; onawah #757; Luke Holiday #760; norman #776; ExomatrixTV #781; Luke Holiday #782

Existing question	Contribution to follow	New forum routes
G052 — How can community contributions return as practical help?	John's debate-source collections and directory of groups, participants' accessible summaries and newer community networks supply work people can share. Follow what became reachable, usable, maintained or practically helpful.	ExomatrixTV #633; greybeard #665; ExomatrixTV #680; ExomatrixTV #681; ExomatrixTV #683; ExomatrixTV #723; onawah #731; ExomatrixTV #738; onawah #742; onawah #750; onawah #753; onawah #756; Anna70 #773; norman #776; ExomatrixTV #779
G055 — How does checking units change a technical safety argument?	Power, frequency, bandwidth and exposure again enter different claims. The pole-climber critique and the vendor's unlicensed-band account provide concrete quantities whose units and roles can be checked.	Nick Matkin #613; ExomatrixTV #624; Michi #672; ExomatrixTV #681; ExomatrixTV #778; Philippe #794
G058 — Whom do the test body and exposure scenario represent?	Phone-testing and carrying-position reports add comparison routes. Recover the model, laboratory, test spacing, uncertainty, applicable limit, manufacturer response and actual user scenario.	onawah #617; onawah #763; ExomatrixTV #790
G067 — What authority, scope and duration did a reported local pause have?	Swiss, Dutch, Croatian, Austrian and French reports describe different pauses, litigation and municipal resolutions. Recover authority, wording, conditions, duration and implementation before counting or transferring a reported success.	onawah #605; onawah #627; onawah #639; onawah #678; Hughe #729; Hughe #752; Hughe #766; Hughe #797
G071 — How accurately does a rollout map describe service at a particular place and time?	Deployment maps, pilots, planned stations, activation and service use remain distinguishable. The linked date and the date asserted in #602 also require comparison with the actual article.	ExomatrixTV #602; Richter #608; onawah #626; onawah #627; ExomatrixTV #638; onawah #661; Michi #672; Eric J (Viking) #771; onawah #787
G072 — How could community observations become a useful prospective follow-up?	The heart-symptom newsletters show an explicit solicitation-and-response sequence. Recover recruitment, dates, denominator, baseline, verification, exposure and comparison while keeping reported experiences and routes to care available.	onawah #717; onawah #730; onawah #796

Existing question	Contribution to follow	New forum routes
G076 — What information would make a right-to-know policy usable?	Right-to-know advocacy, regional action networks and accessible recordings add information-design leads. Follow the decision a person needs to make and what answer or support the information enables.	onawah #731; onawah #742; onawah #751; onawah #753; onawah #763
G081 — How does an authored article become a claim about a publication's institutional position?	Scientific American and Institute of Electrical and Electronics Engineers hosting, a PubMed listing and downstream institutional headlines offer source-attribution comparisons. Recover author, genre, editorial status, original findings and later record changes.	ExomatrixTV #642; onawah #644; ExomatrixTV #723; onawah #757; onawah #758; Luke Holiday #760
G083 — How many satellites are requested, authorized, launched, operating or retired at a given date?	Launch forecasts and application counts add further dated satellite-accounting examples. This pass also recovered an earlier forecast below the tweet in #551; retain its predicted end date and compare it with deployment records.	onawah #661; onawah #730; onawah #765; onawah #788; onawah #796
G084 — What model would connect satellite operations with the global atmospheric electrical circuit?	Geomagnetic and global-circuit accounts add proposed coupling routes. Recover the model, energies, spatial and temporal scales, observations and alternative contributors for each.	onawah #655; Hughe #677; onawah #730; onawah #765; onawah #788; onawah #796
G088 — How can an existing resource archive become a usable next step for a particular person?	Access complaints, practical summit routes and the recovered earlier reply in #573 supply both unmet needs and answers already given. Carry an existing answer with its question so a proposed improvement does not erase prior help.	Tracie (Bodhicee) #705; Tracie (Bodhicee) #706; Tracie (Bodhicee) #707; onawah #731; ExomatrixTV #738; onawah #753; onawah #756; Anna70 #773
G094 — What consent and governance govern the reuse of petition signatures and coalition resources?	A further reproduced Claire Edwards account disputes appeal governance and delivery. Recover the dated message, consent wording, delivery records, replies and remedies while preserving its status as a party's account.	Hughe #607

Existing question	Contribution to follow	New forum routes
G099 — What comparison could test a proposed relation between a rollout location and an outbreak?	The outbreak discussion supplies spatial comparisons, mechanism proposals and stronger assertions as well as questions. Recover denominators, actual exposure, timing, case definitions, comparisons and the claim-specific prediction being tested.	ExomatrixTV #602; ExomatrixTV #610; ExomatrixTV #618; onawah #626; onawah #627; ExomatrixTV #638; ExomatrixTV #652; onawah #655; Hughe #673; ExomatrixTV #696; Hughe #697; onawah #702; onawah #757; onawah #758; ExomatrixTV #770; ExomatrixTV #778; Luke Holiday #780; onawah #787

1.11.15.6 Selected source and version checks The forum supplies the following retrieval routes. The original documents and recordings remain unreviewed in this pass, with one bounded exception: the current PubMed records for the paper circulated in #757 were checked on 30 October 2026. A funding classification still requires the original disclosure and relevant funding record for each work.

Source route	Source form and originating post	Useful next access
Dutch parliamentary clip; archived commentary	Recording and translated interpretation in #615–#616	Recover the full official statement, original language, context, program and relevant equipment.
AirGig article	Advocacy article quoting a vendor description, #650	Recover the vendor’s technical documentation, trial or deployment records, signal path and measurements.
Unlicensed-band vendor account	A Sivers IMA statement quoted in a forum post	Recover the original commercial statement, spectrum decision and network specification; keep its engineering role distinct from a health study.
Proposed residential-device rule; opposing submission	Regulatory proposal and party submission in #692	Compare the exact transmitting/receiving definitions, host and neighbour rights, adopted text and remedies.
Upgrade-order report; navigation-interference report	Industry reporting and a report of inter-agency disagreement, #724 and #700	Recover the official orders, technical records, responses, approval criteria and subsequent disposition.

Source route	Source form and originating post	Useful next access
Historical report leads	Reproduced Pall essay citing Zalyobokskaya, Levedeva and other work	Recover the cited records, including CIA-RDP88B01125R000300120005-6 and CIA-RDP96-00792R000100070001-9, and identify author, original publication, translation, holding body and release history.
Molecular-resonance chapter	Book-chapter citation followed by a social-media interpretation in #702	Compare the original model and observations with each subsequent biological inference.
Original PubMed record; retraction notice	Paper abstract circulated in #757, then further discussion in #758 and #760	**Current record checked:** the article is marked retracted; the editor's notice reports substantial manipulation of peer review. Preserve the forum's historical abstract, the authors' attribution and the later notice as separate records. The notice's scope is this publication.
Panel announcement; recording route	Announcement and community-supplied access in #746 and #751	Recover the event and examine the actual questions, replies, moderation, source access and later corrections.
Flattach municipal-document attachment; Hvar report; Lille report	Municipal-resolution reproduction and local-decision reporting	Recover the original adopted decisions, authority, conditions, duration, implementation and later review.

1.11.15.7 Three bounded investigations this batch could support

1. **A recoverable historical source packet:** follow G043, G102 and G103 from the precise document or statement to the original, its translation and later interpretation. Record funding and interests for the role each source serves. Return a small, usable set of records, answered questions and remaining gaps to the people who requested them.
2. **An inspectable local infrastructure decision:** combine G105, G109 and G110. Identify the actual equipment, application, decision authority, approval clock, affected participants and available response route. Compare claimed benefits, exposure questions, service continuity and the consequences of action or delay. Different conclusions can remain warranted where the material conditions differ.
3. **A contribution that changes the next representation:** follow G114 and G115 through the source, reply, clarification and next comparable retelling. Include the editor's own extraction and attribution. A useful result could be a recovered answer, a faithful representation, a specific repair, a valid null or a clearly bounded unresolved question.

The selected DEDDA source-to-summary checks preserve the if-question in #610, the different formulations in #696 and #770, and Tintin's stated purpose in #720. They also caused the draft to carry John's recovered #573 answer. After the extraction repair, **no material**

correspondence drift was detected in those selected source-to-summary pairs. This result is scoped to the summary profile's correspondence, qualifier and provenance checks using the conversational skill, version 0.1.0, on 30 October 2026. The underlying scientific and institutional questions remain available for their appropriate investigations.

Fourth-batch continuation: page 41 was the next unexamined page after batch 04; it is now covered in the fifth batch. This completes the fourth ten-page batch. The growing map contains **116 potential investigation topics** from **800 indexed post containers**. Source relationships, access gaps and the two earlier metadata corrections are retained in the scope index.

1.11.16 Fifth batch: pages 41–50 — useful questions, recoverable decisions and correction in both directions

30 October 2026 · posts #801–1000 · 20 new or materially sharper questions, G117–G136 · 45 source-linked extensions to earlier topics.

The displayed posting dates run from **29 October 2020 to 22 September 2023**. This pass follows all 200 public post containers in discussion order, including ordinary replies outside malformed inner message boxes. Long reproduced articles and bibliographies were skimmed for topic discovery; quotations introducing new material were included. Some retrieved posts have later edits. The source index retains displayed posting and edit dates, authors, anchors and access gaps. Recordings and image-only content remain additional access layers. The bounded primary-source checks below identify precisely what was examined beyond the forum.

1.11.16.1 A process that can learn from its own next move The governing pages remain close to the work: 10+1, Meta Processing, the 1888 intelligence-properties taxonomy, Topologetics, TCoAw, Beyond Agreemurmelism, Healthy Ambiguity, DEDDA, PQCE and Symmetric Grace and Bidirectional Scrutiny.

Here, the 1888 properties become observable editorial work: distinguish two identifiers; relate a headline to its article; retain a speaker's qualifiers; imagine a test of an unfamiliar possibility; notice support already supplied; and carry a correction into the next representation. Topologetics keeps the connecting routes available. TCoAw keeps the selected question temporary, with awareness of the wider field. Healthy Ambiguity gives room to understand, freedom to explore and responsibility for the next move.

Process Quality Calibration Evaluation (PQCE) asks how a representation acquired authority, how someone can clarify it, and whether the next comparable action changes. John's distinction between PQCE and flawed flagging governs this inventory. A critic's mistaken source identity and an advocate's overextended headline are both inspectable. Scrutiny follows the particular claim, power and consequence; dignity remains available throughout.

The DEDDA conversational skill's source–summary, qualifier and provenance checks were used on the paper-identity exchange, John's product-curation refusal, the stated purpose of the forum and attributed experiences reproduced by others. The resulting correspondence findings are bounded below and remain open to correction. Agreement or disagreement becomes useful when it improves the next question, answer or action.

1.11.16.2 Contributions worth carrying forward

- **Keep the project's stated purpose with the outcome question.** Nick Matkin #914 asks what stopping achieved. In #915, John explains awareness and uncensored education as the main mission, while pointing to particular local outcomes. Nick Matkin #916 acknowledges not having read the later material and offers a forecast about delays. These records permit a more faithful comparison of goals, available knowledge, forecasts and results.
- **Retain an already stated product boundary.** Innocent Warrior #923 asks John to curate a shungite thread and describes limited time to maintain it. #924 explicitly declines, warns about false or exaggerated sales claims, and states an independent-review

requirement for products in his group. #925 clarifies the requester's personal experience and wish for accurate information. The useful next move can respect the refusal, preserve the offer and inspect a particular product independently.

- **Ask the question that still lacks an answer.** JenMorri88 #816 asks where to find research; Shadowman #880 requests evidence behind a technical reply; DaveToo #886 asks for independent material analysis; DaveToo #898 asks how the proposed complex circuitry could assemble. In #899, Onawah expressly says she does not know how before offering an intent hypothesis. A direct answer, a source route or a bounded unresolved result can each advance these different questions.
- **Correct a source identity before debating its implications.** In #959, Nick Matkin points to a retracted article as though it were the article John linked. #960 corrects the identity. The identifiers support that correction; the later interpretation of retraction motives requires its own inquiry. No subsequent acknowledgement of the identity correction was located through #1000. The comparison remains open to the next batch.
- **Preserve useful uncertainty inside an alarming report.** The exploratory blood-sample report in #984 records an initial favourable impression, a later worsening observation, and no significant difference in one described 5G comparison. Keeping these with the report gives replication a more precise starting point than its broader conclusions alone.
- **Make the source reachable and the action usable.** onawah #818 distinguishes an unavailable original video from a substitute; #825 includes Bill Ryan's recovered MP3 route; #842 credits Vera Groen's translated Melnick transcript. #891 works through a confusing public-comment category. These are contributions to access, with their version and translation limits preserved.
- **Keep people's questions and practical needs recognizable.** Rollout distress in #836, disability and meeting-access concerns in #928, and bereavement followed by a causal question in #986 deserve a response that attends to the person as well as the investigation. These records supply questions and needs; the inventory keeps causal attribution open to the work appropriate to it.

1.11.16.3 Coverage for the fifth batch

Forum page	Post containers indexed	Displayed posting dates	Source range
41	#801–820	29th October 2020 → 27th January 2021	#801 · #820
42	#821–840	28th January 2021 → 28th April 2021	#821 · #840
43	#841–860	4th May 2021 → 17th August 2021	#841 · #860
44	#861–880	18th August 2021 → 5th December 2021	#861 · #880
45	#881–900	5th December 2021 → 7th February 2022	#881 · #900
46	#901–920	21st February 2022 → 26th May 2022	#901 · #920
47	#921–940	26th May 2022 → 14th October 2022	#921 · #940
48	#941–960	17th October 2022 → 3rd February 2023	#941 · #960
49	#961–980	7th February 2023 → 11th May 2023	#961 · #980
50	#981–1000	11th May 2023 → 22nd September 2023	#981 · #1000

All 116 prior question records, 800 earlier source records and 82 prior extension entries re-

main unchanged. This batch adds new questions where the investigative object materially changes and extends existing questions where the new contribution supplies a more useful route. The two before-and-after source-access corrections from batch 04 remain in the index.

1.11.16.4 New or materially sharper investigation questions

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G117 — Which funding and interest record belongs to the particular work being assessed?	A headline describes an industry-sponsored journal; other posts concern review-panel memberships, commercial promotions and independent product reviews. Separate publisher, journal, author employment, study support, material provision and funder involvement in design or publication. Recover the dated disclosures and relevant records for each role, including advocacy and product interests. An absent disclosure remains an open record question. **Builds on:** G017 · G033 · G081 · G089.	onawah #805; onawah #812; onawah #825; ExomatrixTV #853; ExomatrixTV #924; norman #942; ExomatrixTV #974
G118 — Under what conditions can a terrestrial signal interfere with an aircraft radio altimeter?	Aviation reports span early warnings, rollout delays and later pilot concerns. Recover the actual terrestrial band, out-of-band emissions, receiver susceptibility, approach or flight scenario, tests, operational restrictions and mitigations. Follow effects on flight safety and service. A receiver-interference finding and a biological-exposure claim need their own measurements and causal paths. **Builds on:** G001 · G060 · G070 · G095 · G108.	Hughe #802; onawah #889; JackMcThorn #893; onawah #894; ExomatrixTV #990

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G119 — What would make a crystal-formation demonstration informative about a biological question?	Posts present xylitol or water-crystallization demonstrations and infer consequences for living tissue. Recover the material, solution, exposure geometry, temperature, evaporation, vibration, imaging, sample selection and comparison. Use randomized, blinded repeat measurements and a specified structural endpoint; then identify the additional work needed to transfer a finding to the proposed tissue or function. **Builds on:** G002 · G008 · G054 · G073 · G115.	James Newell #834; ExomatrixTV #835; ExomatrixTV #939
G120 — Which explanations account for a secular change in measured body temperature?	A Firstenberg newsletter connects historical US and Tsimane temperature studies with electrification and wireless exposure. Recover the original cohorts, dates, instruments, measurement sites, age structure, infection burden, medicines and environmental conditions. Compare the original authors' explanations with the later exposure hypothesis and specify a comparison that could distinguish them. **Builds on:** G003 · G056 · G079 · G099.	onawah #847
G121 — How are labour, extraction and manufacturing burdens distributed through the connectivity supply chain?	A documentary lead and a later consequence list identify mining, child labour, habitat loss, manufacturing pollution and waste. Trace the particular mineral, supplier, facility, product and affected community through recoverable records. Compare procurement choices, repair, reuse and practical alternatives, including the burdens of wired equipment and the accountability available to workers and residents. **Builds on:** G023 · G026 · G031 · G105.	onawah #849; onawah #971

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G122 — Which exposure mode is implicated in an electric-vehicle health complaint?	A Nissan LEAF lawsuit report describes illness, disability and loss of work around a vehicle. Recover the complaint, vehicle configuration, traction system, inverter, wiring, low-frequency and RF measurements, operating conditions and clinical timeline. Distinguish the person's reported experience, proposed mechanism and any court finding while following practical support and remedy. **Builds on:** G001 · G010 · G011 · G064 · G066 · G097.	Hughe #851
G123 — How could a proposed nonmonotonic exposure response be tested?	The no-dose-response essay cites inverse responses and windows in animal and cellular work. Recover each endpoint, waveform, power range, duration, background field, dosimetry and uncertainty. Specify the predicted response curve before replication, including null ranges and a result that would revise it. Compare what each cited experiment supports with the broader headline. **Builds on:** G003 · G007 · G008 · G055 · G103.	onawah #872; onawah #876
G124 — What need does a proposed industrial wireless link serve, and how do alternatives compare?	Lariliss identifies remote mining as a way to reduce dangerous work; hm337 asks what 5G adds to existing connectivity. Define the actual task, coverage, latency, reliability, worker exposure, fail-safe behaviour, access and cost. Compare the available wired and wireless designs with affected workers and communities, retaining both benefits and burdens as testable parts of the decision. **Builds on:** G027 · G031 · G060 · G075 · G082.	onawah #845; Lariliss #871; hm337 #875

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G125 — What would establish the identity and origin of material observed in a vial or biological sample?	DaveToo asks why relatively few independent material analyses are available; later posts supply microscopy and spectroscopy claims. Recover sample provenance, chain of custody, preparation, storage, blanks, reference materials, instruments and competing identifications. Combine independent methods and replication. Follow both the cost and protection of researchers and how results can remain publicly accountable. **Builds on:** G008 · G033 · G049 · G072 · G111 · G115.	ExomatrixTV #883; onawah #885; DaveToo #886; onawah #896; onawah #984
G126 — Which physical steps would a proposed self-assembling circuit require?	DaveToo asks how a complex device could assemble in a body; Onawah explicitly says she does not know how before proposing why it might be concealed. Recover the claimed components, fabrication process, selectivity, energy, addressing, communication path, biological access and observable output. Preserve the unanswered mechanism question and assess any intent claim through its own records. **Builds on:** G041 · G042 · G082 · G111 · G115.	hm337 #875; onawah #885; DaveToo #898; onawah #899
G127 — What legal instrument would change a person's rights or status after a technological intervention?	An interview predicts altered human status and corporate ownership; a later article invokes patents and an SEC filing. Recover the actual jurisdiction, enactment, judgment, contractual provision, defined object and enforcement route. Compare the cited text with the prediction, preserving the distinction between a device or invention, a company's description and a person's legal rights. **Builds on:** G028 · G040 · G042 · G066 · G081.	onawah #900; onawah #940; Philippe #941

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G128 — How can an affected person participate when the consultation setting itself is inaccessible?	A schools webinar, disability advocacy and a consultant article raise barriers to meetings, education and public participation. Ask the people concerned which access they need. Recover notice, venue, remote or written routes, accommodation requests, responses and deadlines; follow whether they can contribute, receive a substantive answer and use an available remedy. **Builds on:** G018 · G035 · G040 · G075 · G076 · G088.	onawah #826; onawah #891; onawah #928; ExomatrixTV #954
G129 — How do a company's investor disclosures compare with its consumer representations?	Posts contrast securities risk statements, marketing and insurance wording. Recover the dated filing, precise risk, product claim, policy type and intended audience. Distinguish a disclosed contingency, contractual allocation and measured harm; compare consistency, omissions, subsequent developments and available consumer remedies across the documents. **Builds on:** G033 · G038 · G066 · G076 · G081.	ExomatrixTV #838; ExomatrixTV #910; ExomatrixTV #937
G130 — Which stage of a citizens' initiative can produce which institutional response?	European campaign calls give differing dates and participation descriptions. Recover the official registration, eligibility, collection window, thresholds, submitted statements, examination and response. Registration, validated support, a duty to respond and a resulting legal change are distinct stages. Preserve historical action calls as dated records and give participants an accurate route to the next available step. **Builds on:** G035 · G036 · G040 · G067 · G080 · G094.	MartinNovotny #907; MartinNovotny #918; ExomatrixTV #933

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G131 — What could a temporary mast shutdown establish about a farm's reported losses?	The French cattle-farm report describes illness, milk losses and a proposed two-month shutdown, followed by a challenge. Recover the actual orders, later disposition, operating log, herd denominator, veterinary findings, milk records, exposure and concurrent husbandry or infectious changes. A prospective comparison should define outcomes, comparable farms, stopping rules, welfare protection and the limits of a single-site result. **Builds on:** G010 · G020 · G021 · G067 · G072.	Hermoor #952
G132 — What explains a shielding product's reported change in performance over time?	A newsletter reports Faraday-bag failures and a move from single to double layers; later posts debate shielding products and cages. Recover the specific fabric, seams, closure, wear, band coverage, test geometry, transmitter behaviour and instrument limits. Repeat measurements before attributing a change to network power, material degradation or another cause, and compare user costs and practical access. **Builds on:** G017 · G054 · G055 · G068.	norman #878; Innocent Warrior #923; ExomatrixTV #924; Innocent Warrior #925; Nick Matkin #926

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G133 — How can an installation-linked case report support a useful follow-up?	John supplies a two-person microwave-syndrome case report; other posts describe symptoms, moving and accommodation needs. Preserve the clinical and exposure timeline, reported onset and recovery, other changes, measurement protocol and author interpretation. Follow functioning and support while designing a prospective comparison with predefined outcomes, suitable controls and participant consent. **Builds on:** G011 · G013 · G016 · G018 · G072 · G085.	onawah #909; ExomatrixTV #954; ExomatrixTV #962; onawah #978; PlasmaVortex #986
G134 — What does a matched-heating experiment resolve, and which exposure questions remain?	The reproduced cardiomyocyte paper compares microwave exposure, heating alone and controls, and includes a limitations section. Carry its actual absorbed power, temperature trajectory, field configuration, cell model and functional endpoints with the findings. Separate a mechanism experiment from a test of an everyday exposure; identify the power, waveform, time and replication work the authors leave open. **Builds on:** G002 · G008 · G055 · G056 · G058 · G073 · G103.	ExomatrixTV #974

ID and potential question	Why pursue it, and what could move it forward?	Forum starting points
G135 — Which device and energy path connect a phone command to a remotely triggered drug release?	The two Mike Adams reproductions cite an electro-responsive graphene-oxide drug-delivery paper and extend it to a mass-harm hypothesis. Recover the engineered carrier, payload, controller, power source, electrodes, applied voltage, coupling, cellular model and demonstrated result. Trace every additional step required for activation by an ambient network signal and assess proposed deployment through its own material and operational evidence. **Builds on:** G027 · G041 · G042 · G082 · G111 · G116.	norman #996; ExomatrixTV #997; onawah #1000
G136 — What would validate a blood-sample change as an exposure or treatment outcome?	A reproduced exploratory report distinguishes initial impressions from a later worsening result and reports no significant difference in one 5G comparison. Preserve those local null and revised observations. Recover draw and storage conditions, anticoagulation, temperature, timing, blinded scoring, reference samples, actual exposure, analytical identification and clinical meaning before using an image or clot description to guide an intervention. **Builds on:** G008 · G011 · G050 · G054 · G056 · G072 · G079 · G115.	ExomatrixTV #831; ExomatrixTV #964; ExomatrixTV #980; onawah #984

1.11.16.5 Useful extensions to existing questions

Existing question	Contribution to follow	New forum routes
G003 — What changes when exposure comes from many sources over time?	John supplies detailed duration, proximity, overlapping-source, lifestyle and health-condition qualifiers. Carry the exposure history and the conditional scope with each claim; his lists also distinguish lower-frequency fields and blue light as additional channels.	ExomatrixTV #831; ExomatrixTV #945; ExomatrixTV #980; ExomatrixTV #999
G004 — How should moving beams and multiple antennas be measured?	New meter demonstrations and beamforming accounts invite comparison of beam scheduling, traffic, spatial and temporal averaging, instrument bandwidth and actual use conditions.	onawah #805; ExomatrixTV #945; ExomatrixTV #975; ExomatrixTV #992; ExomatrixTV #999
G008 — Which cellular mechanisms connect to a measured health endpoint?	The archive adds heart-cell experiments, blood-flow descriptions, reviews and drug-release research. Recover the specific tissue, measured endpoint, exposure and original interpretation before connecting their different mechanisms.	norman #942; ExomatrixTV #962; ExomatrixTV #964; ExomatrixTV #974; onawah #984; norman #996; ExomatrixTV #997
G014 — What evidence is needed for child, pregnancy and reproductive questions?	School, reproduction and egg-development claims supply concrete exposure and endpoint questions. Recover the actual experiment and school proposal alongside the stated concern for children.	onawah #826; ExomatrixTV #945; ExomatrixTV #966; ExomatrixTV #967; ExomatrixTV #973; ExomatrixTV #999
G015 — How do cancer findings transfer across species, signals and time?	The Melnick interview supplies a translated account of NTP design, rare tumours and interpretation. Recover the original interview, study reports, exposure groups, endpoints and analysis before transferring the result to another signal or population.	onawah #809; ExomatrixTV #842; norman #942

Existing question	Contribution to follow	New forum routes
G017 — Which protective products or practices withstand independent evaluation?	Commercial guides, affiliate promotions, shielding products and independent-review requirements recur. John explicitly declines a product-curation request and states that only real independent reviews are allowed in his group; retain this existing boundary when representing his practice.	onawah #811; onawah #812; onawah #825; onawah #827; norman #878; onawah #908; Innocent Warrior #923; ExomatrixTV #924; Innocent Warrior #925; Nick Matkin #926; onawah #961; ExomatrixTV #997
G018 — What support remains useful while a causal explanation is unresolved?	Distress about rollout, reported disability, bereavement and experiences after changing device use identify care and participation needs that remain meaningful during investigation. Preserve the person's actual question and support choice without attributing an unestablished cause.	Icare #836; Hughe #851; onawah #909; onawah #928; ExomatrixTV #954; onawah #978; PlasmaVortex #986
G020 — Which insect or pollinator outcomes deserve exposure-specific study?	The bee discussion, historical ecological studies and farm report add different organisms and outcomes. Recover organism, location, exposure, comparison and welfare-relevant observations for each.	onawah #819; onawah #872; Michel Leclerc #874; onawah #876; Hermoor #952
G021 — How should a local bird-mortality event be investigated?	Mexican bird-collapse and Texel tern-mortality reports propose different events and explanations. Recover species, event dates, original investigator statements, necropsies, exposure records and other environmental or infectious observations.	ExomatrixTV #903; Mashika #904; Gwin Ru #932
G023 — What are the lifecycle costs of the proposed infrastructure?	Mining and manufacturing, 6G plans, phone use and constellation growth extend the lifecycle inquiry. Keep material, labour, energy, repair, waste and habitat routes visible alongside communication services.	onawah #849; Eva2 #855; onawah #856; onawah #971; ExomatrixTV #999

Existing question	Contribution to follow	New forum routes
G025 — Which household or street data are collected, retained and shared?	The Linky article adds electricity-use signatures and household privacy; later articles concern domestic sensors and public kiosks. Recover data resolution, inference capability, retention, recipients, permissions and actual collection practices.	Hughe #803; onawah #845; norman #948
G026 — How does network ownership change access, oversight and geopolitical risk?	Vendor access, national-security reporting and Israel's network references add ownership and procurement questions. Recover the actual contract, privileged functions, safeguards and service dependencies rather than using nationality as a substitute for a system assessment.	onawah #930; onawah #991
G031 — Which wired or user-controlled alternatives remain practically available?	Participants ask what new connectivity is needed, describe wired alternatives and explore phone abstinence. Compare actual service, work, accessibility and emergency needs; the experience described in #953 belongs to Bull-Hansen, and #978 reproduces Kathleen Burke's account.	ExomatrixTV #831; Lariliss #871; hm337 #875; onawah #892; onawah #928; ExomatrixTV #953; onawah #978
G032 — Which health effects and exposure durations do standards address?	The 2021 court opinion, institutional review critiques and later standards discussions sharpen the question of which rule, edition, testing method and claimed protection applies. Carry legal force, guideline status and compliance testing separately.	ExomatrixTV #837; ExomatrixTV #853; onawah #858; ExomatrixTV #864; ExomatrixTV #866; norman #942; ExomatrixTV #964
G035 — How did siting rules redistribute local powers and responsibilities?	School leases, rooftop installations, public kiosks and local petitions connect notice and decision authority with real contractual constraints. Recover the application, lease, decision, access to the meeting and available revision route.	onawah #826; onawah #829; TomKat #840; onawah #850; onawah #868; onawah #891; ExomatrixTV #931; norman #948; ExomatrixTV #966; ExomatrixTV #967; onawah #985

Existing question	Contribution to follow	New forum routes
G038 — What do insurance terms actually exclude or cover?	Lloyd's-related reports and later insurer headlines need the original dated risk report and policy wording. Distinguish liability insurance, device cover, exclusions, coverage and a particular claimant's remedy.	ExomatrixTV #838; ExomatrixTV #910; ExomatrixTV #937
G040 — How can a person's complaint and procedural rights be examined fairly?	Litigation delay, disability accommodation, public-comment access and local procedure affect the ability to obtain a response. Recover what was requested, the actual answer, deadlines, costs and the remedy remaining available.	onawah #826; Hughe #828; onawah #829; onawah #869; onawah #891; onawah #928; ExomatrixTV #931
G041 — What would make a communications system capable of a specified weapon effect?	Military interviews, patents, neural materials and later activation claims offer different capability questions. Recover the actual apparatus, biological access, operating distance, waveform, power, control and measured effect; follow intent through its own records.	ExomatrixTV #862; hm337 #875; ExomatrixTV #922; ExomatrixTV #935; onawah #940; ExomatrixTV #946; Blastolabs #963; ExomatrixTV #994; norman #996; ExomatrixTV #997; onawah #1000
G043 — Which historical microwave episodes have recoverable primary records?	The Glaser archive, translated Melnick interview, historical bibliographies, DIA document route and Vesperman collections supply recoverable leads. Preserve original authorship, country, publication type, holding agency, translation and release history. A bibliography or compilation count does not specify how many independent experiments it contains.	ExomatrixTV #807; onawah #810; ExomatrixTV #842; onawah #876; Blastolabs #963; ExomatrixTV #980; ExomatrixTV #982
G045 — How do dated forecasts compare with subsequent developments?	The 6G article, legal-status predictions, satellite forecast and final dated emergency-test prediction require source-version and outcome comparisons. Record the exact date, time zone, event, proposed mechanism and observable result before following the later record.	onawah #832; Eva2 #855; onawah #856; onawah #900; onawah #940; ExomatrixTV #999; onawah #1000

Existing question	Contribution to follow	New forum routes
G046 — What happens when a safety objection is recategorized?	John repeatedly asks for justification of a forum tag and later explicitly distinguishes a susceptibility claim from virus creation. Another participant calls Lariliss a shill without supplying a funding record there. Preserve each person's wording and qualifications; apply source-based scrutiny to the label and to the substantive claims.	ExomatrixTV #801; ExomatrixTV #859; ExomatrixTV #864; ExomatrixTV #866; onawah #873; ExomatrixTV #911; onawah #912; ExomatrixTV #913; ExomatrixTV #915; ExomatrixTV #945; ExomatrixTV #980
G049 — Which source requests or distinctions improve the next inquiry?	JenMorri88 asks for research; Shadowman asks which evidence supports a reply; DaveToo asks for independent material analyses and a mechanism; Viking requests validation of a claim beyond his expertise. These are distinct invitations to supply usable sources or a specific answer.	JenMorri88 #816; Shadowman #880; DaveToo #886; DaveToo #890; DaveToo #898; Eric J (Viking) #927
G050 — When does a contributor's explanation visibly change after source recovery?	The two-paper exchange contains an identifier correction in #960; no reply acknowledging that correction appears before #1000. Separately, #984 preserves an initially favourable impression, a later adverse observation and a local null. These are bounded sequence records; later uptake remains to be checked.	ExomatrixTV #955; Nick Matkin #956; onawah #957; ExomatrixTV #958; Nick Matkin #959; ExomatrixTV #960; onawah #984
G051 — Which versions, duplicate posts or access barriers change the record?	Onawah identifies an unavailable original video and offers a different one; Bill supplies an MP3 route for another interview; Vera Groen's translated transcript and John's formatting revision improve access. Preserve replacement, recovered recording, translation and derivative as distinct versions.	onawah #817; onawah #818; onawah #825; ExomatrixTV #842; Eva2 #855; onawah #856; onawah #950; ExomatrixTV #977

Existing question	Contribution to follow	New forum routes
G052 — How can community contributions return as practical help?	The archive contains community seminars, school resources, original-study requests, a corrected public-comment navigation route, volunteer invitations and offers to curate material. Follow which contribution becomes usable and which person can choose the next move.	onawah #810; onawah #824; onawah #825; onawah #826; ExomatrixTV #837; Shadowman #880; onawah #891; MartinNovotny #907; MartinNovotny #918; Innocent Warrior #923; ExomatrixTV #924; Innocent Warrior #925; onawah #928; ExomatrixTV #933; ExomatrixTV #988
G053 — How do accounts of consciousness, spirit and human identity enter the inquiry?	Avatar, ancient-architecture, quantum and spiritual accounts propose wider meanings of technology and human identity. Preserve their speaker, question or interpretive status and the distinct empirical or ethical inquiry each invites.	ExomatrixTV #815; onawah #832; s7e6e #844; onawah #900; onawah #940; ExomatrixTV #965; onawah #970
G054 — What can a particular RF meter measure reliably?	The archive adds named handheld meters, software-defined-radio methods and street measurements. Recover calibration, bandwidth, units, clipping, peak and average settings, antenna response, geometry, source attribution and uncertainty.	ExomatrixTV #901; ExomatrixTV #945; ExomatrixTV #975; ExomatrixTV #992
G055 — How does checking units change a technical safety argument?	Technical claims by advocates and critics both need quantity-specific checks. Nick’s #926 wording about electromagnetic radiation and shielding deserves the same examination as microwave-oven analogies, phone-band labels and power claims elsewhere.	ExomatrixTV #831; onawah #872; norman #878; Nick Matkin #926; ExomatrixTV #945; ExomatrixTV #974; ExomatrixTV #980; ExomatrixTV #999
G060 — Which dependencies and fallback options does a rollout create?	Industrial control, 6G proposals, vendor remote access, school contracts and older-network phase-outs raise dependence and exit questions. Recover service commitments, permissions, fallback, costs and the people affected by withdrawal or change.	onawah #845; Eva2 #855; onawah #856; Lariliss #871; onawah #930; ExomatrixTV #966; onawah #991

Existing question	Contribution to follow	New forum routes
G062 — Can privileged access defeat an intended separation of personal data?	The meter-privacy article and vendor backdoor discussion add different privileged-access routes. Trace the actual device, collected data, software permissions, oversight and safeguards in each system.	Hughe #803; onawah #930
G066 — Who bears costs and retains remedies under the actual liability arrangements?	The delayed cancer suit, residential hosts, investment disclosures and school cancellation costs identify different allocations of risk and remedy. Recover contracts, filings, orders and actual responsibilities before inferring immunity or liability.	Hughe #828; onawah #829; ExomatrixTV #838; onawah #850; onawah #900; ExomatrixTV #910; ExomatrixTV #966
G067 — What authority, scope and duration did a reported local pause have?	Tutzing, California, Kerry, Mahopac and Manatee reports describe different decisions, durations and relocations. Jack preserves that relocation may leave service operating; a former official in #931 expressly limits his reading of the settlement. South Korea’s 28 GHz investment-compliance report needs its own spectrum-order classification.	Hughe #803; onawah #868; JackMcThorn #884; ExomatrixTV #931; Hughe #947; Hermoor #952; onawah #985
G071 — How accurately does a rollout map describe service at a particular place and time?	Village activation/deactivation claims, terminal warnings and South Korea’s band-specific allocation decision require actual equipment, operating dates, frequencies and service status. Keep a cancelled allocation distinct from the status of all 5G service.	ExomatrixTV #854; ExomatrixTV #865; Hughe #947; onawah #991
G076 — What information would make a right-to-know policy usable?	School, household, disability and public-kiosk disputes identify decisions for which people need understandable information. Recover notice, alternatives, contract terms, measurements and an effective route to ask and receive an answer.	onawah #826; onawah #850; onawah #891; onawah #928; norman #948; ExomatrixTV #954; ExomatrixTV #966; ExomatrixTV #967

Existing question	Contribution to follow	New forum routes
G081 — How does an authored article become a claim about a publication's institutional position?	A headline describes government admission while linking an independently authored article hosted by NCBI. Recover authors, affiliations, title, identifier and source genre; distinguish hosting, authorship, institutional adoption and downstream headline claims.	ExomatrixTV #955; onawah #957; ExomatrixTV #958; Nick Matkin #959; ExomatrixTV #960; Blastolabs #963; norman #996; ExomatrixTV #997
G082 — What purposes and capabilities are documented for a military 5G trial?	Military experiment and cognitive-warfare interviews supply original-source leads. Onawah expressly notes that the #944 interview does not specifically mention 5G before adding her own proposed connection; retain that attribution boundary.	ExomatrixTV #922; ExomatrixTV #935; onawah #944; ExomatrixTV #946
G088 — How can an existing resource archive become a usable next step for a particular person?	A research request and a later product-curation request have different useful outcomes. Existing source routes can be made accessible, and a curator can decline responsibility. John's #924 refusal and Innocent Warrior's #925 clarification remain part of the returned answer.	JenMorri88 #816; onawah #817; onawah #818; onawah #825; onawah #891; Innocent Warrior #923; ExomatrixTV #924; Innocent Warrior #925
G096 — What changes can participants document from a long-running public discussion?	Nick asks what stopping achieved; John clarifies awareness and uncensored education as the main purpose alongside local outcomes. Nick acknowledges not reading later material and forecasts mostly delays. Compare those stated aims, reading limits, forecasts and specific decision records without replacing the mission with a single success metric.	ExomatrixTV #859; Nick Matkin #914; ExomatrixTV #915; Nick Matkin #916; ExomatrixTV #924; onawah #985

Existing question	Contribution to follow	New forum routes
G099 — What comparison could test a proposed relation between a rollout location and an outbreak?	The Rubik–Brown review proposes a cofactor hypothesis; later posts distinguish susceptibility, symptom overlap and virus creation. Recover actual rollout exposure, denominators, infection measures, time order and competing contributors for the particular proposition. Symptom overlap alone leaves those causes unresolved.	ExomatrixTV #854; ExomatrixTV #955; Nick Matkin #956; onawah #957; ExomatrixTV #958; Nick Matkin #959; ExomatrixTV #960; ExomatrixTV #975; ExomatrixTV #980; Ernie Nemeth #981
G104 — How do publication, filing dates and venue affect access to review of a regulatory decision?	The 2021 EHT v. FCC opinion is a recoverable primary determination about the agency's explanation. Other reports describe a petition, a siting outcome or proposed legislation. Preserve procedural stage, exact holding, later order and remaining route to review.	Hughe #828; onawah #829; onawah #858; ExomatrixTV #864; ExomatrixTV #866; ExomatrixTV #867; onawah #869; ExomatrixTV #931; Hermoor #952; ExomatrixTV #967; onawah #985
G106 — Which distinct propositions are being examined in a claimed 5G–illness relation?	The thread includes distinct cofactor, symptom-substitution, virus-generation and engineered-payload propositions. John's explicit #980 distinction and the #955 headline are separate source records. Preserve both, including the conditional scope of the later explanation and the stronger wording of the earlier shared headline.	ExomatrixTV #955; onawah #957; ExomatrixTV #958; Nick Matkin #959; ExomatrixTV #960; ExomatrixTV #980; Ernie Nemeth #981; norman #996; ExomatrixTV #997; onawah #1000
G107 — Which physical and clinical variables would an oxygen-related explanation need to connect?	A 60 GHz lethality statement is brought by Viking as a request for validation, explicitly beyond his technical knowledge. Recover the original claim, oxygen-related variable, exposure and proposed endpoint before answering it.	Eric J (Viking) #927

Existing question	Contribution to follow	New forum routes
G109 — What rights and duties arise when one household hosts transmission equipment affecting neighbours?	New rooftop, household and school accounts connect host choices to neighbours and pupils. Recover transmitting equipment, contract, consent, access, exposure record and available response before treating host consent as everyone's decision.	onawah #829; onawah #850; ExomatrixTV #966; ExomatrixTV #967
G113 — What makes a voluntary phone-free place workable for the people using it?	The archive adds phone-free proposals and two attributed abstinence accounts. Track the changes made, reported benefits, losses, practical alternatives and voluntary choice; preserve their owners and the limits of the comparison.	onawah #892; ExomatrixTV #953; onawah #978
G115 — How can a component inspection or image check improve an inquiry without judging everyone who shared the clip?	Claims about vial images, birds, material identity and crystallization invite object-specific checking. Keep a participant's request for evaluation, a publisher's claim, an observation and the technical explanation distinguishable.	James Newell #834; ExomatrixTV #835; hm337 #875; ExomatrixTV #883; DaveToo #886; onawah #896; ExomatrixTV #903; Mashika #904; ExomatrixTV #939; onawah #984

1.11.16.6 Selected source comparisons and recovery routes Checked on 30 October 2026: the court opinion, article identities and selected publication text specified below. These bounded checks do not imply that every study, recording, funding relationship or reported local result in the batch has been examined. The funding entries describe what the sources disclose; wider financial relationships remain a separate record question.

Source route	What this pass established or preserved	Useful next access
Official EHT v. FCC opinion, 13 August 2021, especially pp. 30–31; forum #858, #864 and #866	The majority granted the petitions in part and remanded for a reasoned explanation concerning non-cancer effects, testing, children, long-term exposure, technological changes and environmental impacts. It expressly left the scientific debate open. Henderson dissented from that part.	Compare the agency's later response with the precise remand directions. Carry the holding and the separate party descriptions together.

Source route	What this pass established or preserved	Useful next access
Rubik–Brown, 2021: PMID 34778597 / PMC8580522; forum #955–#960	This is the article John linked. It proposes wireless radiation as an environmental cofactor in COVID-19 severity. The authors disclose no competing interests; the article says it selected supporting reports without weighing the evidence and lacked experimental 5G-exposure data. NCBI hosting supplies access, rather than government authorship or endorsement.	Examine the underlying studies and competing findings for each proposed mechanism. The shared headline's government-admission and virus-creation formulations need comparison with the actual article.
Fioranelli et al., 2020: PMID 32668870; notice record	This is the different paper linked by Nick in #959. Its current record is marked retracted. John's identity correction in #960 is supported by the titles, authors, dates and identifiers.	Preserve this paper's status beside its own earlier circulation in #757. Follow later uptake of the identity correction separately from hypotheses about why retractions occur.
Hardell–Nilsson case report, DOI 10.29011/2574-7754.101112; supplied in #962	The publisher identifies a two-person case report. It describes symptoms after an installation and improvement after moving, interprets the relation causally, and declares no funding received and no competing interests.	Recover measurements, timing, clinical observations, other changes and follow-up. Compare reported peak measurements and the applicable averaging rules using a consistent protocol. Preserve both the clinical account and the limits of its design.
Cardiomyocyte paper, university-hosted full text, DOI 10.1016/j.bbrc.2023.04.038; reproduced in #974	The proof-of-concept study separates microwave and matched-heating conditions in cultured heart cells. Its limitations state an absorbed power of about 3 W/g, over 1,000 times the cited safety threshold, with a 9 °C temperature trajectory. It leaves power, frequency, pulse and duration dependence for further work. Disclosed support includes Welsh/EU public sources, Wellcome and the British Heart Foundation, with university support.	Carry the methods, limitations and funding with the reported functional findings. Recover supplementary data and independent replication before transferring the result to an everyday exposure scenario.

Source route	What this pass established or preserved	Useful next access
Electro-responsive drug-release paper, DOI 10.1016/j.mtchem.2022.100987; forum #996–#997	The publisher's abstract and accessible excerpts describe an engineered graphene-oxide carrier, aspirin and doxorubicin, externally applied voltage, a phone-controlled laboratory device and an in-vitro breast-cancer-cell result. The downstream article adds an ambient-network activation and mass-harm hypothesis.	Recover the full controller, electrodes, power, coupling and materials before testing that extension. Full methods and funding were inaccessible in this pass; the abstract does not establish deployment of the proposed wider system.
Official ECI registration decision, 2021/1828; initiative detail route; forum #907, #918, #933	The official decision registers "Stop (((5G))) – Stay Connected but Protected." Registration addresses admissibility; it does not confirm the initiative's factual claims. The forum's historical calls differ about dates and participation.	Recover eligibility, collection window, validated totals and subsequent institutional response. The registry detail did not expose its substantive fields in this retrieval, so this pass leaves completion figures unresolved and does not renew a historical signature call.
Glaser archive, forum #810; DIA file 170026, embedded in #963; Vesperman collections, #982	These are historical research and document-recovery leads. The DIA route is carried from the embedded viewer; this pass has not completed a document-level appraisal of its contents or status.	Recover each original document, authorship, date, country, commissioning or holding body, release marking, cited evidence and exposure. Keep a collection, a commissioned report, a translation and an independent experiment distinguishable.
Balmori review route; ICBE-EMF paper, #942	Forum text supplies review findings and interpretation. The Balmori reproduction classifies selected studies by whether they report effects.	Recover full search and inclusion methods, exclusions, overlapping samples, study designs, effect sizes, precision, bias and disclosures. Compare a study count with the evidential weight and independence of its components.
South Korea spectrum report; French cattle-farm report; school contract report	These concern different objects: band-specific investment requirements, a reported temporary shutdown dispute, and cancellation costs. Their underlying final records were not reviewed here.	Recover spectrum orders and service status; farm orders, operating and veterinary records; and the school lease, approvals, notice and remedy. Classify each reported result by its actual grounds and duration.

1.11.16.7 Three useful investigations to return to participants

1. **An accessible decision packet.** Follow G118, G128 and G130 through an actual in-

terference decision, consultation or citizens' initiative. Return the governing text, the reasons, what participation can change, an accessible response route and the remaining unanswered question. Inspect the institution's explanatory work alongside the participant's submission.

2. **A small, reproducible research packet.** Combine G117, G133 and G134. Return the full study, funding and interests, methods, exposure, limitations, outcome and a feasible independent follow-up. Include a null or revised observation where the source supplies one. The people reporting symptoms retain a place in designing useful support and inquiry.
3. **A correction that reaches the next retelling.** Follow G050, G081, G096 and G135. Preserve the two-paper identity distinction, the actual environmental-cofactor hypothesis, John's stated mission and product refusal, and the additional apparatus needed by a proposed remote effect. Then inspect the next comparable summary, including this editor's, for retained corrections and qualifiers.

The bounded DEDDA result is specific: the two publication identities differ; the identity correction belongs in the account; no acknowledgement appears within the reviewed continuation; and a broader scientific or motive conclusion does not follow from that correction alone. Separate correspondence checks retained John's refusal in #924, Nick's reading limitation in #916, Onawah's explicit connection beyond the interview in #944, and the owners of the reproduced experiences in #953 and #978. This is a corrigible comparison using conversational skill version 0.1.0, not a permanent judgment of a person or an answer to every underlying claim.

Fifth-batch continuation: page 51 was the next unexamined page after batch 05; it is now covered in the final batch. This completes the fifth ten-page batch. The growing map contains **136 potential investigation topics** from **1,000 indexed post containers**. Source relationships, access gaps and retained earlier corrections remain in the scope index.

1.11.17 Final batch: pages 51–56 — usable sources, institutional learning and a complete text-inventory route

30 October 2026 · posts #1001–1114 · 8 new or materially sharper questions, G137–G144 · 49 source-linked extensions to earlier topics.

The questions cover **RF** (radiofrequency) exposure, research, public decisions and practical support.

This final range contains **114 post containers**. The retrieved pagination identifies page 56 as the last page; its final container is #1114. Displayed posting dates run from **23 September 2023 to 5 August 2026**, and a preceding post has an edit dated 7 August 2026. This pass screened public text in discussion order, including new material inside quotations and ordinary replies outside malformed message boxes. Long articles, the ordinance collection and bibliographies were skimmed for topic discovery. Recordings, image contents and most underlying case files remain further access layers. The selected primary-source checks below name the additional material actually examined.

A Google A.I. passage supplied by John on 30 October 2026 adds useful institutional research leads. They enter the work packets below through their original sources. John also requested removal of one accidentally repeated research-scope paragraph from his source record. One complete copy remains, and the prior committed version preserves the earlier state.

1.11.17.1 Correspondence that produces useful next work

The 10+1 and 1888 intelligence-properties taxonomy remain active in the actual reading: notice an answer supplied later; distinguish a reported improvement from a controlled comparison; relate a standards criticism to the evidence and reply; imagine a feasible test; retain a correction; and examine what the next representation makes possible.

Meta Processing keeps the source, selection and resulting action inspectable. Topologetics keeps the connecting source routes available. **TCoAw** (Thinking, Consciousness, Awareness)

keeps the selected focus temporary and the wider field available. Healthy Ambiguity gives room to understand, freedom to explore and responsibility for the next move.

PQCE (Process Quality Calibration Evaluation) examines representation, evaluative authority, response to clarification and later conduct. John's distinction between PQCE and flawed flagging governs this pass. Beyond Agreemurmelism asks what an agreement or disagreement helps clarify or accomplish. Symmetric Grace and Bidirectional Scrutiny keep dignity and correction available across participants, institutions and the evaluator, with responsibility proportionate to power and consequence.

The **DEDDA** (Deep Ethical Drift Detector App) source-and-summary profile was used on this inventory's representations. It retained John's explicit anecdotal qualification in #1113, his video-description clarification in #1023, the later policy answer in #1081, and the actual working article destinations in #1110–1111. It also treats the requested duplicate removal as an authorized editorial change. These bounded comparisons remain corrigible alongside the inventory.

1.11.17.2 Contributions worth carrying forward

- **A personal observation with its own limit intact.** In #1113, John describes choices made using a meter, wired internet and phone settings, and reports that his tinnitus disappeared. He explicitly calls the account anecdotal and non-conclusive, leaving its usefulness for others to decide. The experience supplies a timeline, practical choices and a possible follow-up without losing that qualification.
- **An answer that arrived later in the archive.** #1081 quotes Nick Matkin's earlier question about accomplishments and supplies a worldwide-policy PDF. #1082 adds an extensive collection of local actions and ordinance routes. Carry these with the earlier mission and outcome discussion, then recover each original decision and what it changed in practice.
- **A historical source made navigable.** #1033 provides separate routes for the 1973 Warsaw symposium's sessions, measurements, occupational/public-health material and conclusions. That gives the historical inquiry a tractable document packet with authors, countries and experimental conditions to recover.
- **Questions directed to an accountable recipient.** #1046 reproduces Jeff Chiacchieri and Susan Burke's questions for Congress and the regulator. #1032 offers an offline PDF and a model document; #1036 gives testimony instructions for a dated bill. Their useful continuation is a delivery-and-response record and an accurate current participation route.
- **A concrete household decision.** Ricker #1088 has a utility notice and asks about opting out, outages, fire risk and radiation. Recovering the meter model, installation terms, electrical safety record, measurements and available choices would answer more of that request than another general argument about technology.
- **Keep the source owner with a shared description.** #1023 expressly clarifies that John quoted text beneath a video. The later two-part review in #1110–#1111 names Fabien Deruelle and supplies its bibliography. Both are useful provenance contributions when material travels between platforms.
- **Carry support already offered.** #1018 expresses severe distress; #1019 responds with concern and encouragement. Later interview reporting in #1091 and #1102 raises disability, work and continuity-of-care questions. Follow the practical support and the causal investigation with the people concerned retaining agency.

1.11.17.3 Coverage for the final batch

Forum page	Post containers indexed	Displayed posting dates	Source range
51	#1001–1020	23rd September 2023 → 8th October 2023	#1001 · #1020

Forum page	Post containers indexed	Displayed posting dates	Source range
52	#1021–1040	8th October 2023 → 1st February 2024	#1021 · #1040
53	#1041–1060	4th February 2024 → 20th June 2024	#1041 · #1060
54	#1061–1080	1st July 2024 → 7th September 2024	#1061 · #1080
55	#1081–1100	26th September 2024 → 17th February 2025	#1081 · #1100
56	#1101–1114	14th April 2025 → 5th August 2026	#1101 · #1114

All 136 earlier question records, 1,000 earlier source records, 127 extension entries and the two retained before-and-after source-access corrections remain unchanged. New source relationships and the supplied Google A.I. research leads are identified separately in the scope index.

1.11.17.4 New or materially sharper investigation questions

ID and potential question	Why pursue it, and what could move it forward?	Starting points
G137 — Which technical path connects an emergency alert with a proposed physical effect?	The October 2023 discussion brings together a broadcast test, phone behaviour, biological mechanisms and dated predictions. Recover the alert specification, participating network generations, message transport, device response, emitted signal and exposure. State the proposed biological link and observable outcome separately, then compare the dated prediction with appropriate operational and health records. **Builds on:** G001 · G004 · G041 · G045 · G106 · G135.	onawah #1001; ExomatrixTV #1002; onawah #1006; Ricker #1007; ExomatrixTV #1008; Lilyofthestars #1010; ExomatrixTV #1013; ExomatrixTV #1014; Lilyofthestars #1015; FractalEnergy #1020

ID and potential question	Why pursue it, and what could move it forward?	Starting points
G138 — What comparison could test a proposed contribution to violent behaviour?	Abondance asks whether an exposure could amplify predispositions; later material connects brain-development research with violence and school shootings. Define the proposed intermediate function and outcome, actual exposure and temporal sequence. Compare populations while accounting for age, density, deprivation, substances, sleep, media, reporting, access to weapons and other relevant conditions. A laboratory endpoint, an individual event and a population association each require their own connecting work. **Builds on:** G008 · G012 · G014 · G056 · G069 · G072 · G099.	Abondance #1028; TargeT #1029; ExomatrixTV #1083; ExomatrixTV #1089; onawah #1090; ExomatrixTV #1110; ExomatrixTV #1111
G139 — Who actually owns, operates and answers for a particular installation?	Interviews question whether named mast operators exist; local-policy collections identify applicant and property-owner responsibilities. Trace the observed equipment through site reference, company register, trading name, asset owner, licensee, contractor, permit and service contact. Return an intelligible responsibility chain and a route for obtaining a response, distinguishing an unresolved name from a demonstrated absence of an accountable entity. **Builds on:** G026 · G035 · G040 · G044 · G066 · G109.	ExomatrixTV #1045; ExomatrixTV #1055; ExomatrixTV #1068; ExomatrixTV #1082; onawah #1093

ID and potential question	Why pursue it, and what could move it forward?	Starting points
G140 — What connects a weather-modification reporting category to a demonstrated physical operation?	John supplies a reporting-law route, a government library and a military weather document. Recover the exact activity, energy source, coupling mechanism, atmospheric conditions, scale, experiment and result. Trace the separate steps from a reportable proposal through an attempted operation to a measured weather outcome, and identify the equipment required by any proposed telecommunications connection. **Builds on:** G001 · G010 · G022 · G041 · G042 · G082 · G084.	ExomatrixTV #1051
G141 — Which electrical failures and protections matter when a smart meter is installed or power returns?	Ricker receives an installation notice after repeated outages and asks about fire risk, product improvement and opting out. Recover the meter model, socket and wiring condition, installation procedure, surge and restoration behaviour, certification, incident findings and utility terms. Follow electrical and fire-safety questions alongside the separate RF measurements, cost, notice and available choice. **Builds on:** G010 · G017 · G025 · G035 · G066 · G076 · G097.	ExomatrixTV #1078; ExomatrixTV #1079; Ricker #1088; ExomatrixTV #1098; ExomatrixTV #1099

ID and potential question	Why pursue it, and what could move it forward?	Starting points
G142 — How independent are the evidential contributions behind a standards assessment?	The Google A.I. passage supplied by John points to a published co-authorship analysis. Reconstruct the selected corpus, authors, affiliations, committee memberships, citations, underlying datasets and replication relationships with dates. Test how conclusions change under alternative corpus and network definitions. Follow substantive inclusion and exclusion decisions as well as graph structure, so a reader can inspect how many distinct observations and judgments support a recommendation. **Builds on:** G032 · G033 · G059 · G081 · G089 · G117.	Google A.I. research leads and original sources
G143 — Which research questions remain supported after a major study or programme changes direction?	**NTP** (National Toxicology Program) findings and later research-funding claims raise a concrete agenda question. Recover original aims, completed outputs, announced follow-up, budgets, decisions, stated reasons and successor work. Identify which exposure, mechanism or population questions remain open, who can pursue them, and whether a published research promise receives a traceable completion, revision or explanation. **Builds on:** G015 · G033 · G036 · G056 · G072 · G103 · G117.	ExomatrixTV #1037; ExomatrixTV #1089; ExomatrixTV #1105

ID and potential question	Why pursue it, and what could move it forward?	Starting points
G144 — What happens to a specific methodological objection after an experienced expert raises it?	Lin's standards critique, the later animal-review discussion and alternative scientific networks provide a temporal research route. Recover the exact objection, evidence then available, institutional reply, decision criterion, later study and next revision. Compare the reasoning at each date and what could change it; an expert's former role helps locate the exchange while the substantive argument remains available for examination. **Builds on:** G032 · G033 · G043 · G049 · G050 · G059 · G103 · G114.	ExomatrixTV #1105; ExomatrixTV #1111 · Google A.I. research leads and original sources

1.11.17.5 Useful extensions to existing questions

Existing question	Contribution to follow	Final-batch forum routes
G001 — Which technology and frequency does each account concern?	TargeT asks which 5G band a claim concerns; John later explicitly notes fallback to other frequencies. Acoustic patents and ocean/sonar material add a different physical carrier. Preserve the particular radio band, acoustic wave, device and medium in each explanation.	TargeT #1029; ExomatrixTV #1043; ExomatrixTV #1073; ExomatrixTV #1074; ExomatrixTV #1110
G002 — How do buildings, distance and tissue change the received exposure?	The inverse-square example invites an explicit reference distance, radiated quantity, antenna pattern, propagation setting and near/far-field conditions. Keep a ratio between two measured positions distinct from an unexplained fraction of transmitter output.	TargeT #1029; ExomatrixTV #1041; ExomatrixTV #1043
G003 — What changes when exposure comes from many sources over time?	John's later cumulative-exposure illustration explicitly says it is a concept rather than precise science. Carry that qualification with the analogy, exposure choices and proposed dependence on lifestyle, co-exposures and health.	ExomatrixTV #1026; ExomatrixTV #1031; ExomatrixTV #1043; ExomatrixTV #1061; ExomatrixTV #1085

Existing question	Contribution to follow	Final-batch forum routes
G008 — Which cellular mechanisms connect to a measured health endpoint?	Blood-cell, immune, allergy, brain and nanomaterial claims add original-study leads. Recover the organism, intervention, measured variable, exposure and connecting mechanism before combining them into a clinical or population outcome.	ExomatrixTV #1026; ExomatrixTV #1038; ExomatrixTV #1048; ExomatrixTV #1087; ExomatrixTV #1089; ExomatrixTV #1110; ExomatrixTV #1111
G011 — How are reported symptoms assessed and followed over time?	The translated EHS article proposes several explanatory and clinical routes. John’s later tinnitus account records an improvement following choices he made using a meter and expressly calls it anecdotal and non-conclusive. Preserve the experience, sequence, chosen changes and qualification together.	ExomatrixTV #1087; ExomatrixTV #1113
G014 — What evidence is needed for child, pregnancy and reproductive questions?	School policy, developmental studies and the later violence essay add different research and institutional objects. Follow the children’s actual environment, developmental endpoint, exposure, alternatives and participation in the relevant decision.	ExomatrixTV #1025; ExomatrixTV #1034; ExomatrixTV #1036; ExomatrixTV #1048; ExomatrixTV #1082; ExomatrixTV #1089
G015 — How do cancer findings transfer across species, signals and time?	The NTP source route, 2025 animal systematic review and other research collections extend the cancer inquiry. Carry species, sex, tumour type, exposure, evidence grade and limitations with the result; follow later comments, replies and corrections as part of the same publication history.	ExomatrixTV #1037; ExomatrixTV #1048; ExomatrixTV #1089; ExomatrixTV #1105; ExomatrixTV #1109

Existing question	Contribution to follow	Final-batch forum routes
G017 — Which protective products or practices withstand independent evaluation?	People ask about protection during an alert and smart-meter installation; commercial interview and device material supplies further suggestions. Recover actual performance, relevance to the stated exposure, cost, interests and the person's chosen aim before recommending a product or practice.	Ricker #1007; Lilyofthestars #1010; Lilyofthestars #1015; ExomatrixTV #1061; ExomatrixTV #1072; ExomatrixTV #1085; Ricker #1088; ExomatrixTV #1105; ExomatrixTV #1113
G018 — What support remains useful while a causal explanation is unresolved?	Severe distress, a peer's effort to offer support, a reported disabling injury and tinnitus experiences supply care needs alongside causal questions. Preserve the response already offered and ask what practical or clinical support the person can use, with their agency intact.	Pam #1018; Lilyofthestars #1019; ExomatrixTV #1087; Ricker #1088; ExomatrixTV #1091; ExomatrixTV #1102; ExomatrixTV #1113
G021 — How should a local bird-mortality event be investigated?	The later bird-mortality compilation adds radar, telecom and virological explanations across countries. Recover event-specific species and denominators, radar operation, exposure geometry, sampling criteria, test results, pathology and the relevant environmental record.	onawah #1022
G022 — What changes when connectivity extends through satellite constellations?	Constellation imagery, an oceans presentation and the later military review offer different systems. Recover the actual satellite or underwater architecture, physical carrier, operating stage, exposure route and ecosystem endpoint.	ExomatrixTV #1030; ExomatrixTV #1074; ExomatrixTV #1110
G031 — Which wired or user-controlled alternatives remain practically available?	Wired connections, optical alternatives, phone-use choices and a reported landline-to-VoIP transition connect research concerns with practical access. Recover the exact equipment, settings, contract, fallback and needs of the household or school.	ExomatrixTV #1032; ExomatrixTV #1036; ExomatrixTV #1061; ExomatrixTV #1085; ExomatrixTV #1089; ExomatrixTV #1105; ExomatrixTV #1113

Existing question	Contribution to follow	Final-batch forum routes
G032 — Which health effects and exposure durations do standards address?	The final range adds a current NTP route, regulatory questions, an ICBE-EMF review and Lin's standards paper in the bibliography. Compare the actual evidence threshold, protected endpoint, duration, averaging rule and treatment of an objection in the applicable edition.	ExomatrixTV #1031; ExomatrixTV #1032; ExomatrixTV #1036; ExomatrixTV #1037; onawah #1046; onawah #1047; ExomatrixTV #1048; ExomatrixTV #1061; ExomatrixTV #1105; ExomatrixTV #1111
G033 — How do funding and institutional incentives relate to research results?	Funding, review independence, professional incentives and research-programme priorities recur. Recover specific support, employment, committee roles, declared interests, funder control and resulting decisions; include institutions, critics, commercial providers and this inventory in the relevant comparison.	ExomatrixTV #1031; ExomatrixTV #1037; onawah #1046; ExomatrixTV #1048; ExomatrixTV #1089; ExomatrixTV #1105; ExomatrixTV #1110; ExomatrixTV #1111
G035 — How did siting rules redistribute local powers and responsibilities?	Malibu letters, a New Hampshire bill, local ordinances and new consulting resources supply different participation routes. Recover the application or bill version, notice, testimony, adopted text, response, implementation and later disposition.	ExomatrixTV #1024; ExomatrixTV #1025; ExomatrixTV #1036; onawah #1046; ExomatrixTV #1056; ExomatrixTV #1081; ExomatrixTV #1082; onawah #1093; ExomatrixTV #1109
G040 — How can a person's complaint and procedural rights be examined fairly?	Congressional questions, reported case delays, local objections and requests for information invite a response record. Track the request, delivery, acknowledgement, reasoned answer, available review and remedy; preserve a party's procedural forecast separately from a court's decision.	ExomatrixTV #1024; ExomatrixTV #1025; onawah #1046; onawah #1047; ExomatrixTV #1056; ExomatrixTV #1068; ExomatrixTV #1082; Ricker #1088; ExomatrixTV #1091; onawah #1093; ExomatrixTV #1102; ExomatrixTV #1109

Existing question	Contribution to follow	Final-batch forum routes
G041 — What would make a communications system capable of a specified weapon effect?	The final posts supply acoustic and microwave weapon leads, interview testimony and Deruelle's review. Identify physical carrier, hardware, targeting, power, coupling, distance, control and demonstrated endpoint for each proposed effect; follow an asserted deployment or purpose through its own records.	onawah #1001; onawah #1006; ExomatrixTV #1009; ExomatrixTV #1050; ExomatrixTV #1051; ExomatrixTV #1071; ExomatrixTV #1073; ExomatrixTV #1091; ExomatrixTV #1101; ExomatrixTV #1102; ExomatrixTV #1107; ExomatrixTV #1110; ExomatrixTV #1111
G042 — What can a patent establish about a proposed mechanism or deployment?	Injectable-device, acoustic-manipulation and graphene-related patents appear among heterogeneous sources. Recover the actual claims, status, apparatus and demonstrations, then trace any proposed use beyond the patent through independent operational evidence.	onawah #1006; ExomatrixTV #1009; ExomatrixTV #1073; ExomatrixTV #1110; ExomatrixTV #1111
G043 — Which historical microwave episodes have recoverable primary records?	John provides session-by-session routes to the 1973 Warsaw symposium, alongside historical collections and the later review's bibliography. Recover original proceedings, participants, countries, study conditions and conclusions while retaining publication, translation, government hosting and release status.	ExomatrixTV #1031; ExomatrixTV #1033; ExomatrixTV #1039; ExomatrixTV #1071; ExomatrixTV #1110; ExomatrixTV #1111
G045 — How do dated forecasts compare with subsequent developments?	The October 2023 activation forecasts, proposed 6G timetable and expected July 2025 court result offer dated comparisons. Preserve the original predicted event and condition before reviewing subsequent records; distinguish an explicit question from a forecast and an amended claim from its earlier version.	onawah #1001; ExomatrixTV #1002; gini #1003; gini #1004; ExomatrixTV #1005; onawah #1006; ExomatrixTV #1008; Lilyofthestars #1011; ExomatrixTV #1013; ExomatrixTV #1087; ExomatrixTV #1109

Existing question	Contribution to follow	Final-batch forum routes
G046 — What happens when a safety objection is recategorized?	The disputed forum tag remains challenged through #1112. Retain the words being categorized, requests for explanation, any supplied reasons and whether the published representation changes. Do not replace that inquiry with an assessment of a participant’s character.	Pam #1018; Lilyofthestars #1019; ExomatrixTV #1035; ExomatrixTV #1112
G049 — Which source requests or distinctions improve the next inquiry?	Ricker asks concrete questions about an alert and a utility notice; Abondance proposes a comparison; John asks for reasons behind a tag and supplies new source collections. Carry the precise question with the relevant source or answer rather than substituting a generic debate about the whole subject.	Ricker #1007; Abondance #1028; ExomatrixTV #1031; ExomatrixTV #1033; onawah #1046; Ricker #1088; ExomatrixTV #1112
G050 — When does a contributor’s explanation visibly change after source recovery?	No later acknowledgement of the #960 paper-identity correction was located in #1001–1114. This final range also contains John’s #1023 clarification that he quoted a video description. Retain those separate sequences and inspect the next comparable representation before claiming persistence or failure.	ExomatrixTV #1023; ExomatrixTV #1110; ExomatrixTV #1111
G051 — Which versions, duplicate posts or access barriers change the record?	New source layers include explicit video-description attribution, translated text, a very long ordinance collection, two parts of an authored review, later edits and inert tweet scripts. Actual link destinations remain important: the shortened display text in #1110–1111 still links to the correct full article identifier.	ExomatrixTV #1023; ExomatrixTV #1031; ExomatrixTV #1033; ExomatrixTV #1040; ExomatrixTV #1052; ExomatrixTV #1081; ExomatrixTV #1082; ExomatrixTV #1087; ExomatrixTV #1099; ExomatrixTV #1110; ExomatrixTV #1111; ExomatrixTV #1114

Existing question	Contribution to follow	Final-batch forum routes
G052 — How can community contributions return as practical help?	Session-by-session historical access, offline PDF offers, a letter template, testimony instructions, policy collections and peer support are practical contributions. Follow what becomes reachable and useful, who chooses to use it and what response follows.	Lilyofthestars #1019; ExomatrixTV #1031; ExomatrixTV #1032; ExomatrixTV #1033; ExomatrixTV #1034; ExomatrixTV #1036; onawah #1046; ExomatrixTV #1069; ExomatrixTV #1081; ExomatrixTV #1082; onawah #1093; ExomatrixTV #1113
G053 — How do accounts of consciousness, spirit and human identity enter the inquiry?	A dream account, spiritual interpretations, quantum-entanglement footage and sunlight/biology interviews introduce different meaning and mechanism questions. Preserve each source form and person's experience while identifying which empirical or ethical relation the next inquiry actually concerns.	Lilyofthestars #1011; FractalEnergy #1021; norman #1065; onawah #1090; ExomatrixTV #1101
G054 — What can a particular RF meter measure reliably?	Meter use and readings return in John's practical accounts and later tinnitus report. Recover instrument model, bandwidth, calibration, actual settings, locations, time, uncertainty and changes made; preserve the person's experience and limits of the measurement.	ExomatrixTV #1061; ExomatrixTV #1078; ExomatrixTV #1079; Ricker #1088; ExomatrixTV #1113
G055 — How does checking units change a technical safety argument?	A numerical propagation example, multiple-frequency arguments and acoustic patent frequencies need quantity-specific interpretation. Follow units, reference conditions and conversion steps for claims from critics and advocates alike.	TargeT #1029; ExomatrixTV #1038; ExomatrixTV #1043; ExomatrixTV #1061; ExomatrixTV #1073; ExomatrixTV #1079; ExomatrixTV #1110
G059 — Does a safety review's summary preserve its underlying findings?	Animal and human reviews, guideline critiques and very large bibliographies should retain search scope, study selection, overlapping datasets, outcome-specific conclusions and later responses. A review's methods, evidence grades and correction history can be examined directly.	ExomatrixTV #1031; ExomatrixTV #1037; ExomatrixTV #1048; ExomatrixTV #1082; ExomatrixTV #1089; ExomatrixTV #1105; ExomatrixTV #1110; ExomatrixTV #1111

Existing question	Contribution to follow	Final-batch forum routes
G066 — Who bears costs and retains remedies under the actual liability arrangements?	Personal-liability proposals, utility installation terms, advocacy services, compensation reporting and the Odido mass-claim announcement identify different duties and remedy routes. Recover the actual legal basis, responsible entity, contract, claim, order, payment record and current disposition.	ExomatrixTV #1068; ExomatrixTV #1082; Ricker #1088; ExomatrixTV #1091; onawah #1093; ExomatrixTV #1102; ExomatrixTV #1109
G067 — What authority, scope and duration did a reported local pause have?	The worldwide-policy PDF and ordinance collection answer an earlier outcome question with specific leads. Classify each by jurisdiction, authority, proposal/adoption stage, condition, duration and implementation. Keep the later Odido postponement report distinct from an outcome of the merits.	ExomatrixTV #1025; ExomatrixTV #1036; ExomatrixTV #1056; ExomatrixTV #1076; ExomatrixTV #1081; ExomatrixTV #1082; ExomatrixTV #1109
G072 — How could community observations become a useful prospective follow-up?	Reported symptoms after the emergency test, a school/community account and the later tinnitus sequence suggest prospective follow-up questions. Recover timing, recruitment, denominator, baseline, exposure, other changes and suitable comparisons while retaining useful support.	Pam #1018; FractalEnergy #1020; ExomatrixTV #1026; ExomatrixTV #1038; ExomatrixTV #1087; ExomatrixTV #1089; ExomatrixTV #1113
G075 — What reporting and support routes are available to a concerned worker?	Whistleblower interviews and reporting about a former intelligence officer describe disability, work loss, contested recognition and care costs. Recover the medical, employment and compensation records with appropriate consent; follow functioning and continuity of support alongside investigation of the proposed exposure.	ExomatrixTV #1091; ExomatrixTV #1102; ExomatrixTV #1107

Existing question	Contribution to follow	Final-batch forum routes
G076 — What information would make a right-to-know policy usable?	Public testimony instructions, a utility letter, model local policies and legal-consulting services identify information people need at a decision point. Recover usable terms, deadlines, evidence, alternatives, costs, responsibility and a route to obtain an answer.	ExomatrixTV #1032; ExomatrixTV #1036; onawah #1046; ExomatrixTV #1082; Ricker #1088; onawah #1093
G081 — How does an authored article become a claim about a publication's institutional position?	The NTP factsheet, WHO-supported animal review, institutional commentary and Deruelle reproduction serve different evidential roles. Preserve original author, source genre, hosting institution, commissioning or support, findings and downstream interpretation.	ExomatrixTV #1037; ExomatrixTV #1048; ExomatrixTV #1105; ExomatrixTV #1109; ExomatrixTV #1110; ExomatrixTV #1111
G082 — What purposes and capabilities are documented for a military 5G trial?	Weather-control, military-network, directed-energy and cognitive-warfare sources supply distinct programme leads. Recover the specific mission, document status, trial, device, operational stage and recorded result before treating them as one system.	ExomatrixTV #1050; ExomatrixTV #1051; ExomatrixTV #1071; ExomatrixTV #1091; ExomatrixTV #1092; ExomatrixTV #1101; ExomatrixTV #1102; ExomatrixTV #1107; ExomatrixTV #1110; ExomatrixTV #1111
G087 — What does frequency mean in a technical, experiential or spiritual statement?	Acoustic subaudio pulses, radio signals, an AI-produced quantum video and geomagnetic claims use frequency and field in different senses. Identify the physical quantity, carrier, proposed coupling and measurement belonging to each.	norman #1065; ExomatrixTV #1073; ExomatrixTV #1074; onawah #1090; ExomatrixTV #1101
G088 — How can an existing resource archive become a usable next step for a particular person?	The archive includes a usable answer to an earlier results question in #1081, followed by a detailed policy collection. Ricker's later utility question remains a distinct request. Preserve the answer already supplied and the information still needed by the particular person.	Ricker #1007; ExomatrixTV #1031; ExomatrixTV #1032; ExomatrixTV #1033; ExomatrixTV #1081; ExomatrixTV #1082; Ricker #1088; onawah #1093

Existing question	Contribution to follow	Final-batch forum routes
G096 — What changes can participants document from a long-running public discussion?	The #1081 reply explicitly quotes Nick’s earlier accomplishment question and supplies a worldwide-policy PDF; #1082 adds a large local-policy collection. Carry these later contributions with the earlier purpose and outcome discussion before proposing that nobody supplied results.	ExomatrixTV #1031; ExomatrixTV #1081; ExomatrixTV #1082; ExomatrixTV #1113; ExomatrixTV #1114
G099 — What comparison could test a proposed relation between a rollout location and an outbreak?	Further infection-map, bird-illness and symptom-comparison material requires the actual case definition, timing, network status, exposure, denominator and comparison for the particular relation being proposed.	FractalEnergy #1020; onawah #1022; norman #1053; ExomatrixTV #1080; ExomatrixTV #1110
G103 — How are adverse-effect thresholds translated into operational exposure limits?	The final material contrasts thermal thresholds, cumulative exposure and proposed biological mechanisms. Reproduce the original derivation and compare dose metric, averaging, endpoint and uncertainty with the operational claim being tested.	ExomatrixTV #1032; ExomatrixTV #1037; onawah #1046; onawah #1047; ExomatrixTV #1048; ExomatrixTV #1061; ExomatrixTV #1105; ExomatrixTV #1110; ExomatrixTV #1111
G104 — How do publication, filing dates and venue affect access to review of a regulatory decision?	Reports of FCC review, proposed bills, local decisions and a Dutch postponement have different procedural stages. Recover the underlying filing, official text, decision and later disposition for each rather than treating an announced hearing or remedy as an adjudicated result.	ExomatrixTV #1024; ExomatrixTV #1036; ExomatrixTV #1042; onawah #1046; ExomatrixTV #1082; onawah #1093; ExomatrixTV #1109
G105 — How can infrastructure inquiry protect workers and preserve scrutiny of those making the decisions?	A shared report of tower fires and later personal-liability proposals can be examined beside the group’s earlier nonviolence rule. Keep worker safety, individual acts, decision authority and lawful accountability routes visible together.	ExomatrixTV #1031; ExomatrixTV #1054; ExomatrixTV #1068; ExomatrixTV #1082

Existing question	Contribution to follow	Final-batch forum routes
G106 — Which distinct propositions are being examined in a claimed 5G–illness relation?	The alert discussion, an animal-review headline and the later warfare review contain different propositions and source forms. Preserve the exact mechanism, scope and prediction belonging to each, including John's #1023 video-description clarification.	onawah #1001; onawah #1006; ExomatrixTV #1008; Lilyofthestars #1011; ExomatrixTV #1013; ExomatrixTV #1023; ExomatrixTV #1037; ExomatrixTV #1105; ExomatrixTV #1110; ExomatrixTV #1111
G113 — What makes a voluntary phone-free place workable for the people using it?	Practical wired-connection and device-use accounts add constraints and choices to voluntary lower-wireless spaces. Follow accessibility, emergency contact, work, housing, household agreement and what the participants report changing.	ExomatrixTV #1061; ExomatrixTV #1085; Ricker #1088; ExomatrixTV #1105; ExomatrixTV #1113
G117 — Which funding and interest record belongs to the particular work being assessed?	The 2025 animal review discloses WHO support and several author relationships; Deruelle's review declares nil sponsorship. Retain those specific records and original methods together, with full disclosure routes available for the requested independence filter.	ExomatrixTV #1105; ExomatrixTV #1110; ExomatrixTV #1111
G125 — What would establish the identity and origin of material observed in a vial or biological sample?	The final review's bibliography and nanomaterial claims add source routes for proposed analytical work. Recover the actual sample, material identification, preparation, blanks, methods, independent replication and chain of custody for any claim about a marketed product.	onawah #1006; ExomatrixTV #1026; ExomatrixTV #1038; onawah #1049; ExomatrixTV #1110; ExomatrixTV #1111
G126 — Which physical steps would a proposed self-assembling circuit require?	The later neural-warfare review connects nanomaterials, interfaces, communications and AI. Recover the actual component, biological access, energy, control, connection and demonstrated function at each step, with proposed future architectures kept recoverable.	ExomatrixTV #1009; norman #1065; ExomatrixTV #1092; ExomatrixTV #1101; ExomatrixTV #1110; ExomatrixTV #1111

Existing question	Contribution to follow	Final-batch forum routes
G136 — What would validate a blood-sample change as an exposure or treatment outcome?	John proposes microscopy as a way to follow changes and later supplies blood-cell studies and smart-meter footage. Recover sample handling, species, timing, quantitative endpoint, exposure and actual analytical identification; a white-cell count and an image of a clot answer different questions.	ExomatrixTV #1026; ExomatrixTV #1038; ExomatrixTV #1078; ExomatrixTV #1110

1.11.17.6 Useful research leads from the supplied Google A.I. passage The passage makes three investigations easier to identify: a temporal record of expert criticism, the independence of an evidence network, and the work an alternative scientific body can perform. Their value is in the source recovery and next comparison they enable.

Work packet	Original starting points	A useful result to return
A methodological criticism through time	James C. Lin's 2023 paper discusses RF standards, long-term protection and gaps at millimetre wavelengths. Tom Butler's submission supplies historical references, including Lin's earlier criticism.	Recover Lin's original argument, the relevant guideline passage, response and subsequent revision. Compare like endpoints and exposure conditions. The working object is the objection and how it was handled. See G144.
An inspectable evidence network	Nordhagen and Flydal's co-authorship analysis, DOI 10.1515/reveh-2022-0037, reports a 17-researcher core in the literature network they examined.	Reconstruct the corpus, dated affiliations, graph edges, committee roles and underlying datasets. Identify independent replications and the reasons particular findings entered or left the assessment. Publish a reproducible table and test alternative graph definitions. See G142.
Alternative scientific capacity that produces a usable output	**ICBE-EMF** (International Commission on the Biological Effects of Electromagnetic Fields) describes its founding in 2021, multidisciplinary remit and declaration of independence. Its stated work includes reviewing research, recommendations and scientific discussion.	Follow a specific recommendation through its protocol, evidence, disclosures, proposed protections, responses and corrections. Compare what becomes testable, accessible or practically useful. Connect G032, G033, G117 and G144.

The 6 Intent Liability Mechanics offer a concrete record structure: instructions, incentives, mission/output discrepancies, risk-management priorities, reasoning assumptions and choices. For an assessment, collect the mandate and selection rules; support and interests;

promised protection and observed coverage; priorities and omitted endpoints; assumptions and thresholds; and the decisions made after criticism. The Forgiveness Protocol preserves room to examine architecture, consequences and repair without requiring a prior determination of malice.

A productive comparison can show that a criticism was answered, that an answer missed its object, that a decision improved, or that the record remains unresolved. It should return a clearer question or usable source to the people affected.

1.11.17.7 Selected primary checks and further source access These checks were made on **30 October 2026**. They are bounded to the named text or record; source independence remains a source-specific question. The complete multimedia and underlying-document archive has further work available.

Source route	What was examined or recovered	Useful next access
NTP factsheet supplied in #1037	The current file prints **August 2025**, despite the older filename. It retains male-rat tumour findings, reports no detected behavioural or DNA-damage effects in a separate five-day follow-up with unsuccessful temperature measurement, and states that NTP/NIEHS have no additional RF exposure research planned.	Preserve the retrieved edition; compare the original studies, follow-up designs, data and research-agenda decisions. A source URL alone does not fix a historical version.
Mevissen et al. animal review, 2025; 2026 corrigendum record, circulated through #1105	The abstract rates evidence for gliomas and malignant heart schwannomas as high certainty, with outcome-specific findings elsewhere. It reports heterogeneous studies and WHO partial funding; the competing-interest statement describes several author relationships, including industry-connected ones. The current record links a 2026 correction.	Recover the complete review, protocol, study-level data, disclosures, correction text and methodological exchange. Compare the specific animal finding with the human-risk or institutional headline attached to it. The correction's detailed effect was not reviewed here.
Lin's standards paper; Nordhagen–Flydal analysis	Publication identities and abstracts were checked. Lin's record includes a no-known-competing-interests declaration; the network analysis was accessed at abstract/publisher-excerpt level.	Recover full methods, declarations, cited documents and substantive replies before extending the network result to an institutional decision.
ICBE-EMF self-description; Butler submission	The organization's declared programme and the submission's authorship and cited historical routes were inspected.	Follow a concrete recommendation and its source trail, response and update history. Preserve an organization's statement, a submitted opinion and an adopted regulatory position as identifiable records.

Source route	What was examined or recovered	Useful next access
15 CFR § 908.3, related to #1051	The reporting provision expressly includes lasers or other electromagnetic-radiation sources when used for weather-modification activity.	Recover a particular activity report, experimental method, operating conditions and measured result. This gives G140 an actual legal-text starting point and a separate physical investigation.
CDC graphic-novel record, related to #1014; FCC alert-test notice	The CDC catalog identifies the work as a 2011 emergency-preparedness graphic novel. The alert notice supplies an operational-record route.	Compare the original purpose, message system, dates and signal/device behaviour with the claim being examined. Retrieve the relevant operational and outcome records for G137.
1973 symposium session routes; worldwide-policy PDF; ordinance collection	The forum supplies a navigable historical packet and specific local-policy leads. This pass screened their descriptions and skimmed the reproduced collection.	Recover original proceedings and individual adopted decisions, conditions, implementation and later review. Keep the practical answer in #1081 connected to the earlier question it addresses.
Deruelle review, full article; PDF, reproduced in #1110–#1111	The two-part reproduction and bibliography were skimmed. Its actual links already use the full article identifier. The supplied review's sponsorship declaration is nil, as recorded in S08.	Use the cited originals to examine the military, biological, materials and deployment relations individually. The review's broad interpretation remains attributable to its author.
Odido postponement report; whistleblower and care-account route; utility question	These preserve a party's expected decision, interview reporting and a person's practical request. Their final court, compensation and installation records were not reviewed here.	Recover the specific docket and later order; consented medi-cal/employment/payment records; or utility model and terms. Return the result at the level of the original question.

1.11.17.8 What the completed inventory makes possible The six batches form one source-linked route through the public text of this thread: **56 pages, 1,114 indexed post containers and 144 potential investigation topics**, with **176 extensions** retaining later contributions to earlier questions. Topic counts describe the editorial map. Each entry keeps its own source, investigation value, proposed next step and relation to the earlier work.

Three useful returns are now possible: a historical source packet with original authors, countries and exposure conditions; a decision packet with authority, participation, reasons and outcomes; or a small research packet with methods, disclosures, findings and a feasible independent follow-up. The map also preserves practical help, refusals, requests, personal observations and corrections. Its value can be assessed through what becomes more understandable, recoverable or usable.

The DEDDA checks in this final range preserve John's #1113 qualification and #1023 provenance clarification, and carry the later #1081 answer with its earlier question. Inspecting the actual #1110–1111 destinations produced a valid null: the article links already work with

the complete identifier. No acknowledgement of the earlier #960 paper-identity correction was located in #1001–1114; later correction uptake remains unestablished. These are local source-and-summary comparisons using conversational skill version 0.1.0, not judgments of a person.

End of the retrieved thread: page 56, post #1114. This completes the requested final batch and the text inventory through that endpoint. If new posts are added, a later commissioned pass can resume after #1114 by rechecking page 56 first. The scope index retains source identities, dates, relations, access gaps, earlier corrections and the endpoint record.

1.12 Supplied source index

The index identifies all supplied files. Public publication records are linked where available; archive filenames preserve recovery routes for the remaining items. PDF locators below refer to the uploaded file's page count, which may differ from printed pagination. Reports, journal articles, books, policy documents, citizen submissions, source directories and AI exchanges retain their distinct roles.

1.12.1 S01

IEEE device measurements and health review

Archive filename: *2020-Science2Stop5G-ieee-Electromagnetic-Radiation-Due-to-Cellular-4G-5G-WiFi-Bluetooth-Technologies.pdf*. Public publication record. The second uploaded copy is byte-identical. Peer reviewed, 2020, 21 pages. Naren, Elhence, Chamola and Guizani. Pre-5G device measurements and proposed exposure benchmarks; the first page names Qatar National Research Fund support.

1.12.2 S02

Review of studies at 6 to 100 GHz

Archive filename: *5G Wireless Communication and Health Effects.pdf*. Public publication record. Simkó and Mattsson, 2019, 23 pages. Peer reviewed; 94 experimental publications. Funding statement on PDF page 17 explicitly names Deutsche Telekom Technik GmbH.

1.12.3 S03

Pall report on 5G risks

Archive filename: *5G-Risks-The-Scientific-Perspective-Science2Stop5G.pdf*. The second uploaded copy is byte-identical. Martin L. Pall, 127 pages. Mechanisms, eight classes of proposed harm, cumulative effects, children, institutional criticism and forecasts. Summary pages 4–7; cumulative effects chapter 3; 5G chapter 7.

1.12.4 S04

Pall statement on predicted effects

Archive filename: *Professor-Dr.M.Pall.Predicted-5G-Effects-Coronavirus.pdf*. Dated 25 February 2020, 8 pages. VGCC argument, incident reports and forecasts, including a proposed COVID-19 severity or replication cofactor. A research statement rather than a new controlled 5G exposure experiment.

1.12.5 S05

Trower report on Wi-Fi and reproduction

Archive filename: *BarrieTrower-WiFi-Report-Stop5G-related-info.pdf*. Barrie Trower, September 2013, 19 PDF pages. Public-facing report on schools, reproduction and inheritance; its percentage projections are the author's extrapolations.

1.12.6 S06

Epigenetics and chronic disease paper

Archive filename: *5G Epigenetics and Chronic Disease(1).txt*. Charis Calender-Suemnick, August 2022. Identified as a fourth-year research paper. Discusses DNA, epigenetics, disease history and graphene; cited papers and the paper's broader interpretations have separate evidentiary roles.

1.12.7 S07

Low emission wireless engineering book

Archive filename: *Science2Stop5G-Low-Electromagnetic-Emissions-Wireless-Network-Technologies-5G-and-beyond-2020.pdf*. Public publication record. IET edited volume, Muhammad Ali Imran, Fabien Héliot and Yusuf Abdulrahman Sambo, 305 PDF pages. Title and imprint pages 6–7; preface pages 16–18; synthesis pages 294–295. Engineering and exposure mitigation.

1.12.8 S08

Review connecting RF and neurological warfare

Archive filename: *5G-6G Warfare SNI-15-439.pdf*. Public publication record. Fabien Deruelle, Surgical Neurology International 15:439, 29 November 2024, 15 pages, DOI 10.25259/SNI_731_2024. Review article; financial support and sponsorship declared nil.

1.12.9 S09

Directed energy defence policy brief

Archive filename: *directed-energy-weapons-ckc-4-june-2025.pdf*. Chris Kremidas-Courtney, European Policy Centre, June 2025, 5 pages. Policy analysis of military laser and microwave programmes; distinguishes development, trials and deployment.

1.12.10 S10

United Nations technology concept note

Archive filename: *UN-5G-Agenda2030-2017-10-Joint-Meeting-Concept-Note.pdf*. Concept note for 11 October 2017, 4 pages. Explicitly connects 5G, IoT, big data and nanotechnology to development policy; discusses benefits, risks, inequality and governance.

1.12.11 S11

International opposition compilation

Archive filename: *Global-Stop5G-Resistance-Worldwide-Councils-and-Cties-Opposing-5G.pdf*. Australian parliamentary inquiry submission 237, 8 pages. Citizen testimony and linked examples of objections, motions, restrictions and alternatives; includes older 4G proposals.

1.12.12 S12

International exposure comparison chart

Archive filename: *EMF-RF-ExposureGuidelines-International.pdf*. Saved Dropbox HTML containing the text of a Safe Living Technologies comparison chart, rather than PDF bytes. Mixes regulatory limits, proposals, recommendations and background levels; references span different dates.

1.12.13 S13

John Kuhles 5G discussion

Archive filename: *5G(1).txt*. John's statements and AI replies on cumulative exposure, institutions, beamforming, alternatives and consent. Preserves the unsafe-car analogy and the distinction between illustration and scientific quantification.

1.12.14 S14

Extended 5G discussion

Archive filename: *5G part 2(1).txt*. Overlaps the preceding discussion and adds AI responses. Source for stated positions and response patterns; repetitions are not independent corroboration.

1.12.15 S15

RFK and international advocacy links

Archive filename: *5G Robert F. Kennedy Jr.(1).txt*. Advocacy text, international research and campaign links, plus an attributed Dutch article about funding and regulation. A source directory rather than one scientific study.

1.12.16 S16

Anti-Unsafe-5G and fringe framing

Archive filename: *Anti-Unsafe-5G as 'fringe'(1).txt*. Exchange about labeling, omissions, institutional authority and AI responses. Claims made by an AI about its own hidden training or internal conflict remain claims within that exchange.

1.12.17 S17

Anti labels and conditional criticism

Archive filename: *Anti(4).txt*. John's discussion of unsafe cars, technology and the loss of conditions when criticism becomes an identity label.

1.12.18 S18

Extended discussion of anti framing

Archive filename: *ANTI2(1).txt*. Discussion of institutional criticism, constructive controversy, intent and AI accountability. Relevant to process and representation.

1.12.19 S19

Clarification and phantom claim discussion

Archive filename: *Anti3(1).txt*. Discussion of C1 clarification, imposed anti-consensus claims, uncertainty and correction. Includes a June 2029 date marker; used here for its supplied text, not as an authenticated event before this page's date.

1.12.20 S20

People and institutional criticism

Archive filename: *I am not Anti NATO people(5).txt*. Short statement distinguishing criticism of institutional conduct from hostility toward people. Used for that correspondence principle.

1.13 Source and contribution record

John Kuhles: research scope, supplied archive, autobiographical account, Anti-Unsafe-5G clarification, initiating questions, ethical concerns, forecasts, page commission and project architecture. The source statements below retain his wording and spelling. At John's request on 30 October 2026, one accidentally duplicated paragraph was removed; one complete copy remains.

GPT / Codex, this conversation: page-specific synthesis and wording, source inventory, funding checks, retrieval of the cited institutional and scientific records, and publication work. Statements attributed to other A.I.s inside the supplied files retain their separate authorship.

Reading scope: the inventory covers 22 uploads and 20 distinct files. Examination included abstracts, conclusions, funding declarations, selected mechanism and discussion chapters, government and policy text, and relevant qualifier and correction passages in the exchanges. The references within those files and the larger HTML archive remain further source layers.

Reopening conditions: recover an original statement or exposure record that changes an attribution; identify a citation that does not support its associated wording; establish or challenge a proposed technical connection; compare an original forecast with later outcomes; or find that this page itself displaced the question it set out to preserve.

1.14 John Kuhles source record

1.14.1 Research statement supplied 30 October 2026

> I DO HAVE VAST DATABASE of many aspects of 5G ties to so many other "controversial topics" like "Crowd Control Weapons" … MIMO Phased Array Beam Forming can easily be weapnized because it originally came from the military is my point of view!
>
> 5G 6G * Photonic Computing China (soon worldwide?) & Generative Optogenetics Synthetic Biology DNA/RNA & A.I. & Quantum Tech & Room Temperature Superconductor Technology & Quantum Communications Tech & LED "Blue Light" Frequencies Everywhere & Weaponized 5G/6G Tech - Researching the dark side (unchallenged by MSM) of WEF-Transhumanism: "Human 2.0" "H+" using: "Biodigital Convergence", BioNanoTech & NanoToxicology, "Internet of Things" (IoT), "Internet of Bodies" (IoB), WBAN (Erratic Pulsed mmWaves & TerraHerz) concted to "Project Salus & Project Maven" (Pentagon), MBAN, OMNET, Neuromodulation, Biosensors, Biophotonics, Synthetic (Nano) Biology & Biomimetics, Optogenetics Visible Light Communication (VLC), IEEE 802.15 & EMBS, Weaponized 5G/6G Tech connected to Mass Surveillance Capitalism & Censorship Industrial Complex, "The Internet Of Behavior or Bodies" (IoB) all connected to the dystopian "15 Minute Smart Cities" which is an open prison system connected to conditional token based "social credit top down compliance system" SDGs CBDC. For the controversial topics I research in these areas, I apply strict evidence standards: I rely primarily on credible sources, such as peer-reviewed scientific publications, declassified government documents, statements from recognized experts, and, where possible, reputable mainstream and alternative media reports. When claims are still in the hypothesis or investigative stage, I clearly distinguish those as my own insights, patterns, or questions for scrutiny—never as settled fact. This way, I allow anyone, including AI models, to assess and contextualize them transparently, especially when claims aren't widely covered or accepted by mainstream sources.

None of the 100+ different A.I.s could handle me when I “debate” the 5G topic with A.I.s … most are extremely predictable.

All archived… it is all in the 10+ GB of HTMLs

There will be a day … 5G is treated like how people “choose” to lower their life expectancy in exchange for living a “modern life” … to have the conveniences they sell you! If in the future it is clear that many cumulative issues are only fully understood AFTER many died earlier than normal … there is no escape from the self-inflicted madness UNLESS you can put on record now what I know and what is to come.

— **John Kuhles [parrot] [butterfly] [tree]**

1.14.2 Origin account supplied in the same conversation

The true origin story of why I created the biggest Stop5G Facebook Group Page & Stop5G.net on the planet in 2017-2018-2019 started in the mid-1990s, when a good friend of mine explained that you can’t broadcast on certain frequencies. He had a Ham Radio License and also took a course on RF EMFs in the Netherlands, with many big antennas on his roof… his name is Rinus Nienhuis from Amsterdam; he later moved to Beverwijk.

I followed StopUMTS.nl news long before I created the Stop5G Fb Group … I interviewed 2 different building biologists and EMF Consultants in the early 2000s, long before 4G & 5G. I interviewed people who explained what “electrosmog” is, etc.

I never shared this much with A.I.s about the depth of my EMF RF Microwaves research because I can easily predict the common denominator when anything is seen as high-stakes and controversial.

Then why now, John, why bother GPT with it now?

Simple:

I know my name is connected to 5G, and much of what is said about me isn’t correct… and I lost Iris in December 2019, which also changed how I decided to move in a deeper direction… Seeking the ROOT CAUSE of so many unresolved injustices on so many levels that anyone could go mad UNLESS you can step out of ANY frame and start from scratch… like 10+1 came out of that, for example!

And start thinking about (SYSTEM) PROCESSES, not what people agree or disagree on.

Eventually, I will face AIs to explain my side of the 5G story!
