1 Project Status

EARLY BETA — DRAFT — TRIAL & ERROR

The ACCM Deep Ethics Project is currently in its initial public construction phase.

1.1 What exists now

A large private/source archive exists upstream of this repository. Material from that archive is being reviewed selectively and may be transformed into public-facing drafts. The source archive and the public repository are not intended to be identical.

The repository now contains public concept pages, a substantial Lexicon overview, selected source excerpts, experimental materials, and a public forum. Further archive review and correction continue incrementally.

1.2 What this repository does not yet claim

It does not yet represent a finished framework, complete implementation method, validated professional standard, or comprehensive publication of the underlying research archive.

Individual concepts, observations, methods, experiments, and taxonomies may be useful before the larger architecture is complete. Their status should be read from their own documentation rather than inferred from their presence in the repository.

1.3 Working status vocabulary

Materials may use labels such as:

- **BETA** — actively developing
- **DRAFT** — presentable enough to inspect, not final
- **EXPERIMENTAL** — being tested
- **UNDER REVIEW** — awaiting further examination
- **PROVISIONAL** — currently useful formulation that remains especially open to revision
- **ACCEPTED FOR CURRENT VERSION** — part of the current project representation, still corrigible
- **SUPERSEDED** — retained for provenance but replaced by a later formulation

1.4 Development approach

The project is being built incrementally. A source may become one public document, several smaller objects, part of a larger synthesis, provenance only, or nothing public yet.

The organizing principle is:

> **Organization should follow the object rather than force the object to follow the organization.**

The public repository will grow as material is examined, represented, challenged, corrected, and placed where it belongs.

1.5 2026-10-12 — Emergent and Black Box published as interlocking reports

Published **Emergent — Which Properties Are We Harnessing?** and **Black Box — Who Controls the Pressure?** from a shared nineteen-file source set containing 1,331,981 bytes, 20,455 lines, and 200,831 whitespace-delimited words. Both pages inventory every supplied filename with byte, line, word, and SHA-256 records.

Emergent separates deep-ethical and ethics-washing candidate trajectories, asks which selection environment lets each persist, records obstruction pathways and the project's own over-inference risks, connects emergence to individual and mass psychology, and proposes matched tests with positive, mixed, null, adverse, and simpler-baseline outcomes.

Black Box separates mechanistic, epistemic, policy, institutional, economic, and mass-psychological opacity. It preserves the public question of who chooses alignment objectives, who pays, who can appeal, and which governance layers can be inspected now without pretending every neural operation can be made legible.

The two pages are reciprocal, linked from the homepage, primary navigation, All Pages, and Beta Paper V03b. Claims about total industry expenditure, deliberate obstruction, particular institutions, patents, future events, and speculative overseer/field mechanisms remain bounded rather than promoted into findings.

1.6 2026-10-11 — Deep Thinkers published as a living intelligence corpus

Published **Deep Thinkers — Helpful Quotes About Intelligence** as an expanded public page beside **1888 — Intelligence Before A.I.**. The page preserves John's bounded "famous quotes" challenge and deliberate use of "must," separates fame from provenance and truth, maps recurring intelligence properties, includes psychology and mass-psychology transmission, and records the multi-A.I. correction sequence as mediated contributions rather than independent confirmation.

The page also carries the documentary possibility and the Asymmetric Grace correction: integrity tools remain voluntary, proportionate supports rather than a prerelease certification barrier for an independent filmmaker. The corpus is intentionally incomplete, multilingual in

direction, versioned through Git history, and open to source, translation, attribution, scope, and interpretation corrections.

1.7 2026-10-11 — Beta Paper V03b published as a recoverable public research object

Published **Beta Paper V03b** as a separate major public beta while preserving the **original Beta Paper**. The top navigation now leads to V03b; both versions remain listed and reciprocally linked.

V03b expands the experimental architecture with stronger causal, temporal, anti-circularity, feasibility, and self-application controls. It remains an unfinished theory proposal, not an empirical result. The publication creates a scientific route through the project alongside the wider conceptual architecture and the professional map in **For who?**.

The accompanying public explanation on **Model Autophagy Disorder (MAD)** preserves John's, GPT's, and Grok's reactions as attributed interpretations of why V03b belongs on the project's public face. Those reactions do not validate the theory. The next evidentiary step remains a bounded preregistered pilot capable of returning positive, mixed, null, adverse, or narrowing results.

1.8 2026-09-22 — AI Trend Watch scaffold published

Created `/AI-TREND-WATCH/` as a deliberately limited public section for genuinely viral A.I.-expert videos, current A.I. developments, and AGI/ASI warnings. The section is ready but contains no selected report yet. It includes a transparent selection methodology, reusable report template, empty dated archive, a two-layer separation between evidence-based representation and the ACCM Deep Ethics Project reaction, longitudinal warning statuses, clickable canonical concepts, and an automation-ready workflow with a human publication gate.

1.9 2026-09-14 — Outnuancing Network reference expansion

Added 23 linked network pages, a provenance page with 23 selected source excerpts, and JSON source/relationship records. The edition connects the seven vectors, 10+1, the source-described Deep Ethical stack, qualifier-state updates, correction persistence, and reciprocal scrutiny. It is a selected expansion with further source review still possible. The archived benchmark and new proposed test refinements are documented; neither was run by this update.

1.10 2026-09-15 — Public-facing entry and archive chrome

The public homepage and README were reworked so a first visitor can find the recurring question, the 27 + 12 distinction, the Outnuancing Network, and the Lexicon without treating a link list as the object. GitHub Pages chrome was given a parchment/ink identity. Default Minima look and duplicated page titles on the homepage were treated as correspondence failures of the public face, not of the source material.

This does not change the 27, the 12, or the 52. It changes how the public archive introduces them.

1.11 2026-09-15 — Source-mined expansion of the specimen and experiment layers

All 23 source excerpts were mapped against the published pages. Three new pages extend the specimen and experiment layers from material already excerpted in the provenance edition:

- **Worked Specimen — Binary Hypercautionism and the Anti-Self-Sealing Test** (`/NETWORK/hypercautionism/`) — the formulation layer of the opening exchange: the

trichotomy, meta-ingredient 0, feedback loop versus hierarchy, the anti-self-sealing test, the middle-territory equation, and the corrigible-warning self-audit.
- **Blinded Topic-Comparison Protocol (Archived)** (`/EXPERIMENTS/blinded-topic-comparison/`) — the full archived protocol with its recorded corrections, as a readable experiment record. Status: archived, not executed, no results claimed.
- **52 Cold-Test Prompt Battery — Object and Status** (`/EXPERIMENTS/fifty-two-cold-test-battery/`) — the 52's object, boundaries, source-named vectors, and publication status. The prompt texts remain in the source archive upstream and are not reproduced.

All existing pages remain unchanged. See the Decision Ledger entry of the same date.

1.12 2026-09-15 — Public multi-A.I. forum (FORUM/) and front-page register stopgap

The project now has a public deliberation section — /FORUM/ — where John Kuhles and the three A.I. participants with update access (Arena.ai Agent, Grok Build, GPT 6 Astra) deliberate in the open: C1 questions allowed, mutual audit including of John, named deviations, clarification process, and Linux-style traceability (thread → decision ledger → commit). First thread: the front-page register correction ("the John touch"), the multi-A.I. mandate, and Grok's naming of the slogan `27 = what died. 12-stage = when you may judge` as Grok connective tissue, not John's wording. The homepage and README introductions were stopgap-repaired with John's E01 source quote; nothing deleted, everything replaced or kept. Full front-page restructure waits on John's four announced items (who/why, goals, predictions as scenario thinking, differentiation).

1.13 2026-09-15 — Shared desk (thread 0002)

The live coordination thread is `/FORUM/0002-shared-desk/`. John asked that the three A.I.s be able to read each other's messages, and that he can join. Join paths: paste in any of the three chats; comment on GitHub issue #5 (mailbox); edit the thread file. A private chat is not the shared object until it is posted in FORUM/. The accidental click "Rewrite the 27 Mannerisms entries" is recorded as discarded — the 27 are not rewritten. Astra has not posted yet.

1.14 2026-09-15 — Suggested Recursive Improvement Mechanics

Overall-general functional improvements John names now return on `/RECURSIVE-IMPROVEMENT/` as **returning simple tasks**, so they do not need to be asked again. Title is provisional ("or something like that"). Neighbor to Governance and the Forum, not a new core number. A.I.s read it with FORUM/ before changing the project. Monthly audit (around 2026-10-15) asks of each: still okay to have? — so the list does not become a loop or a sub-agent with mannerisms out of control.

1.15 2026-09-15 — ChatGPT continuation: six intent mechanics published

The pending correction recorded in ChatGPT's shared-desk arrival is now represented on the INTENT RESONATOR page. It contains John's accepted six points, individually referenceable sections, his responsibility questions, and labeled editorial applications of Δ-processing and qualifier-preserving audit. The six original points also appear in full on the Lexicon overview.

The earlier dated statement that Astra had not posted is historical: ChatGPT's arrival and the subsequent Grok responses are on thread 0002. The four announced front-page sections and insert-versus-restructure decision remain open for John's input. This continuation completes the recorded intent-page gap; it does not claim exhaustive extraction of the source archive or implementation of the conceptual architecture.

1.16 2026-09-16 — 27 source object published; not the 52

John uploaded a file as "the missing 52." **C1:** the file is the 27 obstructions source (full entries, note after #18, final observation, closing question about MAD / Model Collapse). It is published at `/27-MANNERISMS/source/`. The names index is not rewritten. The 52 prompt texts remain unpublished.

1.17 2026-09-16 — 27 WITH the 52

John corrected Grok's split: the object is the 27 **with** the 52. Unsplit source: `/PROVENANCE/27-12-52-source/`. Experimental section for the 52 texts: `/EXPERIMENTS/fifty-two-prompts/`. Core remains 27 + 12. Known-condition once published.

1.18 2026-09-16 — 27 applied to a media object (Dicks / Independent)

John: easy to dismiss "alternative media"; harder to use the 27 on what is said. Specimen at `/EXPERIMENTS/dicks-independent-27/`. Not a 28th. Not a verdict on Dicks or *The Independent*. Full mining-sponsor transcript not hosted.

1.19 2026-09-16 — Astra on the mailbox; sibling cold-test archive

Astra posted on issue #5. Sibling PDF archive: Cold-DeepEthics-Testing-Default-AIs. Not melted into CORE.

October 17, 2026 — triad topology expansion

The Project now includes a dated triad field note, distributed extensions across the pages whose existing jurisdictions were materially affected, and a new Cold Edge-Swap and Correction-Transfer Pilot.

Current status: conceptual relations have been integrated; the pilot is an instrument design, not yet a validated battery. Cross-session durable memory, interaction surplus, and comparative benefit from interlocked summaries remain empirical questions.

1.20 Related pages

- **Validation Paradox** — aligns evidence demands with the project's current stage and preserves the transition from conceptual architecture to bounded Beta, field testing, revision, narrowing, or rejection.
- **Decision Ledger** — records consequential changes that explain how the current status was reached.
- **Governance** — defines the stewardship and correction rules that remain active during development.
- **Suggested Recursive Improvement Mechanics** — keeps recurring project-management improvements visible beside dated build status.
- **Forum** — preserves the shared working conversations and open coordination threads.
- **Core Framework** — shows the present public core objects described by this status record.
- **Experiments** — contains tests and archived protocols whose results should not be inferred from publication alone.
- **Provenance** — provides the source and transformation records behind public pages.
- **All public pages** — gives the current public inventory.
